1. Interim report for the 104th business term
-

To Our Shareholders

We are pleased to present our interim report for the first half of our 104th business term (from January 1, 2004 to June 30, 2004).

Reviewing conditions in both the domestic and overseas economies during the first half of the current fiscal year, the United States economy experienced a strong recovery, driven largely by resilient consumer spending and capital investments brought on by aggressive fiscal and financial policies. The European economies showed a slow but generally stable recovery trend. The Asian economies, in particular, China, benefited from favorable exports, and showed continued strong growth. As for Japan, continued expansion in exports and capital investments together with a recovery in consumer spending contributed to steady growth in the economy. In the foreign exchange markets, the Yen strengthened against the U.S. Dollar, but weakened against the Euro, compared to the first half of 2003.

Looking at the markets in which we conduct business, the market for digital cameras and digital video cameras continued to grow strongly. The market for networked multifunctional devices and printers showed steady growth due to increasing demand for multifunctionality and color. At the same time, demand for semiconductor production equipment for IC chips and memories as well as mirror projection mask aligners for LCD panels grew as a result of an expansion in the market for digital consumer electronics, etc. and subsequent increased capital investments by semiconductor and LCD panel manufacturers.

Amid this business environment, Canon entered the fourth year of Phase II (2001 to 2005) of its Excellent Global Corporation Plan. In keeping with this plan, the Canon Group has carried out various management reforms in order to establish a highly profitable earnings structure that can withstand various changes in our business environment. In particular, we sought to further advance reforms in our production and development activities, as well as taking steps to improve the competitiveness of our products, to reduce costs, and to embark on the restructuring of our procurement activities. Further, as for our semiconductor and LCD production equipment operations, we strengthened our corporate structure in our development, production, and sales functions in order to respond flexibly to changes in the market.

As a result of these efforts, and supported by vigorous economies around the world, our earnings during the first half of the current fiscal year continued the uptrend seen during the second half of 2003. Consequently, we recorded consolidated sales of 1,648.4 billion yen (up 7.3% from the first half of 2003), consolidated income before income taxes and minority interests of 260 billion yen (up 20.6%), and consolidated net income of 160.8 billion yen (up 25.8%). On a non-consolidated basis, we recorded sales of 1,078.6 billion yen (up 13.9%), and ordinary profit of 197.7 billion yen (up 20.3%). All of these figures represent record highs. Non-consolidated net income declined to 127 billion yen, falling 1.4% from the first half of 2003 when we recorded 45.9 billion yen for gains on exemption from the substitutional portion of the employees' pension fund.

We have decided to pay an interim dividend of 25 yen per share (up 10 yen from the interim dividend for the previous business term) from August 27.

Looking ahead to the second half of the current fiscal year, while we expect economies worldwide to continue to recover, the Canon Group remains prepared for any uncertainties that may develop in our business environment. Against the background of such conditions, we seek to implement further business reforms designed to further strengthen our management structure and to raise our performance to an even higher level.

We look forward to your continued support and encouragement in the future.

August 2004

FUJIO MITARAI
President & C.E.O.

Total	10,786	13.9

Notes:

1. Regarding the segment of Business information products within the Business machines category in the consolidated information above, there were no sales on a non-consolidated basis.
2. From this interim period, the Company is disclosing in the Office imaging products category of the consolidated information above, the figures related to information system business (including document solution, network integration, etc.), previously classified under Optical and other products, in view of the close association between the information system business and the office imaging products business. The figures for the previous term have been reclassified, accordingly.

Consolidated

Non-Consolidated

Business Machines Operations

Office Imaging Products

Amid continuing fierce competition in both domestic and overseas markets for office imaging products, we have focused our efforts on offering increased networking functions, higher performance and color functions in order to expand sales.

For office use products, sales of iR C3200/C3200N, which was introduced in 2003 as the first color machine in our networkable, multifunctional imageRUNNER series, remained strong in all of our global markets. Also, through the additional launch of iR C3100 medium-speed color multifunction device, and our high-speed multifunction device iR C6800, we endeavored to strengthen our color product line-up and expand sales. Our strong line-up of black and white digital multifunctional devices, which ranges from low- to high-speed models, and our iR1600/2000 series in particular, was well received in both Japanese and overseas markets, and recorded a steady level of sales, much as in 2003.

We also aggressively pursued the solutions business, by taking advantage of our Multifunctional Embedded Application Platform (MEAP), which is incorporated in our imageRUNNER series machines and allows users to expand functionality by installing specialized application software, and also by promoting our solid line-up of imageWARE series software for document solution.

As for products targeting individuals and small business owners, acting upon the shift in demands from single-function copying machines to digital multifunctional devices (featuring copying machine, printer, and facsimile functions) prominent in Japan and the U.S., we strove to expand sales of products like our imageCLASS MF5550, introduced last year in the North American market. In the process of shift from analog to digital copying machines in Europe, we endeavored to expand sales of products like the PC-D320/340 compact digital copying machine that was introduced last year.

As a result of these efforts, consolidated and non-consolidated sales of this segment rose by 2.8% and 4.1%, respectively, compared to the first half of 2003.

Change in Sales
100 MILLIONS OF YEN

Consolidated

Non-Consolidated

5

Computer Peripherals

In order to respond to the trends of lower prices and shorter product lifecycles in this area, we sought to cut costs, increase development speed, and reduce inventory.

Regarding inkjet printers, we responded to the shift in demand towards lower priced models offering improved functionality that was especially visible in overseas markets. Further, continuing from last year, we strove to advance the added value of our products by promoting the adoption of PictBridge, a user-friendly industry-standard interface that enables direct printing from digital cameras and digital video cameras. Sales of our PIXUS 560i with the PictBridge interface, introduced last year, were strong, and our flagship model, PIXUS 9900i, which we introduced during this first half, has received high praise from professional photographers for its outstanding image resolution. While demand in Europe, North America and Japan is shifting from single-function printers to multifunctional devices (including copying, scanning and other functions), sales of our medium-class PIXUS MP360/370 machines introduced last year were quite favorable. In addition, we have sought to further expand sales through the introduction of our high-end model, the PIXUS MP740/710 during this first half.

Turning to laser beam printers, sales of our OEM-brand color laser beam printers grew strongly in volume terms along with solid sales of black and white printers. As for the Canon brand products, sales of printers that can handle A3-sized paper, including Canon's new Satera LBP3800/3700 black and white printer, were strong in Japan.

With regard to image scanners, although the demand for multifunctional devices has been on the increase, our CanoScan LiDE80 machine, introduced last year, continued to sell strongly in Japan and North America.

While sales in this division grew on a volume basis, the shift in demand towards lower-priced products continued, restraining sales figures to levels almost the same as in the first half of 2003. Sales declined 0.1% on a consolidated basis, and rose 0.4% on a non-consolidated basis.

Consolidated

Non-Consolidated

7

Business Information Products

The market for commercial-use document scanners marketed by Canon Electronics, Inc. is expanding on the back of the paperless trend in Japan, Europe and North America. In particular, DR-9080C/6080 and other high-speed scanners, with the scanning speed of 60 to 90 pages per minute, helped to boost sales.

As for calculators marketed by Canon Electronics Business Machines (H.K.) Co., Ltd., models with printing function continued to see strong sales in North America. Moreover, Canon Electronics Business Machines (H.K.) Co., Ltd.'s electronic dictionaries, which are sold in Japan, including the wordtank V70 which has Chinese language capability, wordtank C30 designed for students, and the newly-introduced wordtank G50, have contributed significantly to its sales.

With regard to personal computers sold by Canon Sales Co., Inc., intentional curtailing of personal computers as individual products, as part of a strategy to promote the sales of high value-added total solution packages, resulted in large decline in sales.

Consequently, consolidated sales in this segment declined by 10.5% compared to the first half of 2003.

Note: For this segment, there were no sales on a non-consolidated basis.

Change in Sales
100 MILLIONS OF YEN

Consolidated

Camera Operations

Demand for digital cameras, both single-lens reflex (SLR) and compact type, expanded on a global basis, while worldwide demand for conventional film cameras contracted. For video cameras, as well, demand for digital models continued to grow.

Amid these trends, in response to the strong potential of the market for digital SLR cameras, we took the lead in introducing an affordable model, EOS Kiss Digital, in September 2003, and sales of this camera continued to sell strongly. Additionally, the EOS-1D Mark II, which was introduced during the current term and boasts the world's fastest continuous shooting speed, has received extremely high recognition from professional photographers.

With regard to compact digital cameras, while widespread diffusion in Japan caused growth in the domestic market to slow, we expect to see growth in demand for these products outside of Japan. Amid this situation, we have introduced five new models in our PowerShot series, including the PowerShot Pro1, and three new models in the IXY DIGITAL series, including the IXY DIGITAL 500, to expand sales.

In the area of digital video cameras, we have bolstered our line-up in each of our markets around the globe by introducing new products such as the FV M100 KIT and the FV M20 KIT, and we have outfitted our products with our unique DIGIC DV imaging processor to differentiate them from competing models and thus successfully increased our sales. We have also focused on expanding sales of compact photo printers, and have introduced new products such as the CP-330, which employs the PictBridge industry-standard interface that allows direct printing from digital cameras and digital video cameras.

At the same time, as to film cameras, despite our introduction of several new cameras, such as the EOS 7s SLR, targeting experienced camera users, and the Autoboy N150 compact camera, sales of film cameras declined due to the shift in consumer demand towards digital cameras.

As a result, this segment's consolidated and non-consolidated sales rose by 22.4% and 38.2%, respectively, compared to the first half of 2003.

Change in Sales
100 MILLIONS OF YEN

Consolidated

Non-Consolidated

Optical and Other Products Operations

Demand for semiconductor production equipment expanded due to strength in the semiconductor market arising from brisk sales of cellular telephones and digital consumer products, as well as from replacement demand for personal computers. Demand for LCDs used in televisions and other applications was also extremely strong. Amid these trends, demand from memory manufacturers in Japan, Taiwan, Korea and other areas of Asia for our leading-edge semiconductor steppers expanded rapidly. At the same time, due to continued growth in demand for charge-coupled devices (CCD) and small-sized LCDs, orders for conventional products such as our i-line and KrF steppers continued to see favorable trends. Further, demand for mirror projection mask aligners for large-sized LCD panels remained robust, with our MPA-7800 machines for fifth generation giant panels (1,200 mm by 1,300 mm) experiencing particularly strong growth in sales volumes.

In the area of broadcast-use television lenses, brisk demand was seen in North America, where the trends of digital and high resolution broadcasting are firmly in place. Demand in Japan and other parts of Asia remained strong, as well. In particular, we focused efforts to expand sales of our handy-type, high-grade ENG lens series, including our J17ex7.7B, and succeeded to substantially increase the number of units sold.

As for medical equipment, sales of our CR-DGi non-mydratic retinal camera, introduced last year, remained strong. Furthermore, the CXDI-50G and other X-ray digital cameras, which use our unique sensor technologies, recorded favorable sales.

Consequently, this segment's consolidated and non-consolidated sales rose by 35.4% and 75.8%, respectively, compared to the first half of 2003.
