THE HONGKONG AND SHANGHAI BANKING CORPORATION LIMITED
2005 CONSOLIDATED RESULTS - HIGHLIGHTS

- Operating profit excluding loan impairment charges and other credit risk provisions up 7.2 per cent to HK\$45,408 million (HK\$42,375 million in 2004).
- Pre-tax profit up 3.9 per cent to HK\$45,249 million (HK\$43,536 million in 2004).
- Attributable profit up 2.3 per cent to HK\$32,873 million (HK\$32,148 million in 2004).
- Return on average shareholders' funds of 37.4 per cent (43.1 per cent in 2004).
- Assets up 7.5 per cent to HK\$2,673 billion (HK\$2,487 billion at the end of 2004).
- Total capital ratio of 12.4 per cent; tier 1 capital ratio of 11.7 per cent (11.9 per cent and 11.4 per cent at 31 December 2004).
- Cost efficiency ratio of 41.2 per cent (38.8 per cent for 2004).

Comparative figures have been restated to reflect the adoption of a number of new and revised Hong Kong Financial Reporting Standards and Hong Kong Accounting

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Standards, details of which are set out in the appendix.

Within this document, the Hong Kong Special Administrative Region of the People's Republic of China has been referred to as 'Hong Kong'.

Comment by Vincent Cheng, Chairman

In 2005, The Hongkong and Shanghai Banking Corporation recorded a pre-tax profit of HK\$45,249 million, an increase of 3.9 per cent over 2004. Over the course of the year, further investments were made in our customer group businesses. These resulted in significant increases in pre-tax profits in our Personal Financial Services and Commercial Banking businesses of 24.9 per cent, to HK\$21,640 million, and 26.2 per cent, to HK\$11,131 million, respectively. In Corporate, Investment Banking and Markets, a strong trading performance was offset by a sharp decline in net interest income against a backdrop of exceptionally difficult market conditions. Loan impairment charges and other credit provisions recorded a net charge of HK\$2,064 million against a credit of HK\$862 million in the previous period, reflecting higher provisions against credit card lending outside Hong Kong, and higher individually assessed provisions in Commercial Banking in Hong Kong.

Highlights include:

- In Hong Kong, HSBC reinforced its position as the number one card issuer with 4.0 million cards in force. In the rest of Asia-Pacific, cards in issue grew by 32.7 per cent.
- Card spending increased by HK\$31.3 billion and receivables grew by 30.0 per cent.
- Insurance income from personal customers rose by 19.3 per cent to HK\$4,522 million.
- In Commercial Banking, net interest income increased by HK\$4,024 million, or 57.0 per cent.
- Net fee income in Commercial Banking was 10.0 per cent higher, supported by strong trade finance activity in Hong Kong and mainland China.
- In Corporate, Investment Banking and Markets, net fee income rose by 7.5 per cent to HK\$5,388 million.
- HSBC acted as the joint global co-ordinator of the Hong Kong Government's HK\$22 billion Link Real Estate Investment Trust ('REIT') initial public offering ('IPO'), the largest ever real estate offering and REIT IPO in the world.

Further progress was made with our investments in mainland China. At the end of December 2005, Bank of Communications had issued 650,000 credit cards co-branded with HSBC. In August, we obtained formal approval to increase HSBC's stake in Ping An by 9.91 per cent to 19.9 per cent. We also entered into an insurance agency agreement to sell Ping An products through HSBC branches. We have obtained regulatory approval to set up a fund management joint venture with Shanxi Trust and Investment Corporation Limited, which is to be renamed HSBC Jintrust Fund Management Company Limited and will be headquartered in Shanghai.

Other investments to support the continued expansion of our businesses include the acquisition of a 10.0 per cent stake in Vietnam Technological and Commercial Joint Stock Bank (Techcombank), Vietnam's third largest joint stock bank, and the opening of three new branches in Korea. In Personal Financial Services, headcount rose to support business expansion in the region, including the recruitment of additional financial planning managers in Hong Kong and sales staff in the rest of Asia-Pacific. In Commercial Banking, the number of relationship managers and support staff increased, although savings were made from initiatives to handle business through low cost channels.

The prospects for the Hong Kong economy are encouraging in 2006. The territory's two-year recovery remains on track, with consumer spending continuing to be a

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

key driver of economic growth coupled with revived confidence and improved job prospects in the territory. However, competition in the financial services industry is likely to remain intense, with a flat yield curve posing significant challenges to interest rate management in the first half of the year.

We are also encouraged by the prospects for mainland China and the rest of Asia-Pacific. Fuelled by a growing United States economy and growing intra-regional trade coupled with strengthening domestic demand, the Mainland and the rest of Asia-Pacific are expected to continue to experience solid economic growth in 2006. Asia is expected to remain at the centre of the rapid growth of the global economy.

^ Other operating income and operating expenses in 'Other' include an adjustment of HK\$4,305 million to eliminate intra-group items (2004: HK\$4,953 million).

Personal Financial Services reported profit before tax of HK\$21,640 million, which was HK\$4,313 million, or 24.9 per cent, higher than 2004. There was strong growth in Hong Kong of HK\$4,482 million, or 27.6 per cent, in profit before tax, driven primarily by the widening of deposit spreads following the rises in Hong Kong dollar and US dollar interest rates this year. In the rest of Asia-Pacific, profit before tax fell by 15.9 per cent to HK\$902 million due to higher impairment provisions, while operating profit excluding loan impairment charges increased by 15.8 per cent, reflecting continued expansion across the region, particularly in mortgages and credit cards, and improved deposit spreads.

Net interest income increased by HK\$6,016 million, or 28.9 per cent, compared with 2004. In Hong Kong, net interest income improved by HK\$4,656 million, or 29.6 per cent. During 2005, interest rates in Hong Kong rose significantly, reflecting rising US dollar interest rates. In addition, adjustments to the HK\$:US\$ Linked Exchange Rate System reduced the likelihood of an upward realignment of the Hong Kong dollar, prompting a reversal of much of the inward flows from investors that had depressed local market rates in 2004. This led to a widening of deposit spreads to more normal levels compared with the exceptionally low levels experienced in 2004. Competition in the Hong Kong mortgage market remained intense and margins were impacted by the rising cost of funds. In the rest of Asia-Pacific, net interest income rose by HK\$1,362 million, or 26.8 per cent, reflecting strong asset and deposit growth across the region. Mortgage lending increased in Australia, Taiwan, Korea, Singapore and India, benefiting from increased use of a direct sales force and successful promotional campaigns, although spreads narrowed in the face of competitive pressures on pricing and higher funding costs. Interest earned on credit cards was higher, notably in Indonesia, the Philippines, India and Taiwan, reflecting strong growth in receivables. The deposit base expanded in a number of countries, particularly mainland China and Singapore, and rising interest rates led to a widening of deposit spreads. Net interest income in 2005 also includes income of HK\$989 million from held-to-maturity investments in the insurance business; such income was included in 'Net investment income on assets backing policyholder liabilities' in 2004.

Net fee income of HK\$8,050 million was 7.0 per cent higher than in 2004, largely attributable to strong growth in the sales of wealth management and insurance products throughout the rest of Asia-Pacific and higher credit card fee income. Total revenue from wealth management and insurance products for the group grew by HK\$547 million, or 7.0 per cent. Fee income from unit trust sales fell by 21.5 per cent, driven by a change in market sentiment in Hong Kong as, in the higher interest rate environment and with a flattening yield curve, investors reduced their demand for longer-term equity-related investments. Sales of structured deposit products in Hong Kong, however, remained strong as income grew by 69.2 per cent, reflecting increased marketing effort, an enhanced product range and the use of private placement arrangements. Broking and custody income decreased by 6.0 per cent, in line with the fall in retail securities turnover in Hong Kong.

Fee income from credit cards was HK\$435 million, or 20.7 per cent, higher than in 2004, as the group maintained its position as the largest card issuer in Hong

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Kong, with 4.0 million cards in force. In the rest of Asia-Pacific, cards in issue grew by 32.7 per cent. Innovative and targeted promotional campaigns, together with an enhanced rewards programme, led to increased card spending of HK\$31.3 billion in Hong Kong and the region, and receivables grew by 30.0 per cent.

The group has continued to grow and develop its insurance business. Overall, insurance income from personal customers rose by 19.3 per cent to HK\$4,522 million. Life assurance income grew, attributable to an enhanced range of insurance and investment products. Revenues from general insurance and the mandatory provident fund business were also higher.

The charge for loan impairment increased, by HK\$54 million to HK\$1,344 million, reflecting higher provisions against credit card lending in the rest of Asia-Pacific, in line with the significant growth in receivables throughout the region, and a sharp rise in provisions in Taiwan reflecting higher delinquency levels. In Hong Kong, however, there were lower provisions in the credit card, mortgage and other personal lending portfolios, as the economy continued to recover with falling unemployment, lower bankruptcies and higher residential property prices.

Operating expenses increased by HK\$1,273 million, or 8.1 per cent, over 2004. Headcount rose to support business expansion across the region and included the recruitment of additional financial planning managers in Hong Kong and sales staff in the rest of Asia-Pacific. Performance-related pay rose in line with the increase in sales revenues. Higher marketing costs were incurred, particularly for mortgages, credit cards, insurance and investment products, in order to raise brand awareness and increase market penetration, particularly in the rest of Asia-Pacific. Investment in technology increased to support higher business volumes, new product lines and the continued development of alternative distribution channels. The increase was partly mitigated by the impact of a change in the allocation of certain centrally borne expenses to customer groups.

Income from associates includes a full 12 months' share of profits from Bank of Communications attributable to Personal Financial Services.

Commercial Banking reported profit before tax of HK\$11,131 million, an increase of 26.2 per cent over 2004, attributable primarily to improved deposit spreads, as well as balance sheet growth. Profit before tax in Hong Kong grew by 5.3 per cent to HK\$7,504 million, and in the rest of Asia-Pacific to HK\$3,615 million from HK\$1,681 million. Operating profit excluding loan impairment provisions rose by 40.4 per cent and 22.8 per cent in Hong Kong and the rest of Asia-Pacific respectively.

Net interest income increased by HK\$4,024 million, or 57.0 per cent, compared with 2004. This reflected a 10.3 per cent growth in advances since the end of 2004, and improvements in deposit spreads following rises in Hong Kong dollar and US dollar interest rates, coupled with increased active management of the commercial banking deposit base. The benefit was, however, partly offset by competitive pressure on lending margins. In Hong Kong, advances to the property, manufacturing, trading and retail sectors grew, with higher new lending and increased utilisation of existing facilities. The introduction of Core Business Banking Centres in 2004, together with an increase in the number of dedicated relationship managers to serve key accounts, and the implementation of a pre-approved lending programme for small- and medium-sized enterprises, contributed to the growth in lending and deposits. The group continued to benefit from the growth in international trade and the expansion of the Mainland economy. Business links between Hong Kong and mainland China continue to be developed, and three new branches and a sub-branch, with commercial banking presence, were opened. Throughout the region, the sales force and number of relationship managers have increased to take advantage of cross-selling opportunities for insurance and investment products, as well as expanding

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

lending and deposit-taking activities. In the rest of Asia-Pacific, net interest income increased, notably in Singapore, mainland China and Taiwan, as a result of asset and deposit growth and improved deposit spreads. Net interest income also includes income of HK\$694 million from held-to-maturity investments in the insurance business; this was included in 'Net investment income on assets backing policyholder liabilities' in 2004.

Net fee income at HK\$4,524 million was 10.0 per cent higher than 2004. Trade finance activity in Hong Kong and mainland China remained strong, and fee income rose despite increased market competition. The marketing of foreign exchange products such as swaps and options, and of remittance services to Hong Kong customers engaged in international trade was also successful in contributing to revenues. Growth in fees elsewhere in the region was strong, particularly in Indonesia, Bahrain, Vietnam and Thailand, attributable to the expansion of lending and particular focus on developing relationships with customers involved in international trade. Income from the sale of wealth management products fell, reflecting a fall in demand for unit trusts in Hong Kong, partly offset by growth in structured deposits. Income from insurance increased by 6.4 per cent (or 10.7 per cent on an underlying basis, as 2005 includes the allocation of certain commissions to Personal Financial Services) despite intense market competition, with a new commercial banking insurance division established in Hong Kong to provide customer-focused commercial insurance solutions and services.

There was a swing of HK\$1,534 million in loan impairment provisions to a net charge of HK\$896 million from a net credit of HK\$638 million in 2004, as 2004 benefited from a general provision release. In 2005, there were higher new individual provisions, and lower releases and recoveries, in the bank in Hong Kong and Hang Seng Bank, partly offset by lower new provisions and higher releases in mainland China, and an increase in releases in India.

Operating expenses rose by HK\$640 million, or 13.4 per cent, as the number of relationship managers and support staff increased, although savings were made from initiatives to handle business via low cost channels. This included the enhancement of internet banking for which customer numbers have increased by over 40 per cent. The proportion of commercial banking transactions handled at branch counters fell by more than 10 per cent and now only account for around 65 per cent of all transactions. In mainland China and Korea, costs were driven by increased investment to expand the branch network. A change in the allocation of certain centrally borne expenses to customer groups also contributed to the cost growth.

Income from associates includes a full 12 months' share of profits from Bank of Communications and Industrial Bank attributable to Commercial Banking.

Corporate, Investment Banking and Markets reported profit before tax of HK\$13,252 million, 23.6 per cent lower than 2004, as a result of a decline in net interest income in Global Markets which more than offset a strong trading performance.

Net interest income fell by HK\$2,533 million, or 22.5 per cent, compared with last year. In Corporate and Institutional Banking, deposit spreads improved following rises in Hong Kong and US dollar interest rates, which together with growth in loans, contributed to an increase in net interest income of 41.4 per cent. The payments and cash management business performed exceptionally well, with new mandates won as a result of further enhancements to the product range and the group's cross-border coverage. Liability balances increased following the successful implementation of complex cash management solutions across the region. In addition, India, Taiwan and Korea benefited from the growth in deposits from securities custody and clearing customers. In Global Markets, the adoption of new accounting standards affected trading income through the reclassification of interest and dividend income on trading assets and

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

liabilities from 'Net interest income' and 'Dividend income', to 'Net trading income'. This added HK\$817 million to net interest income but was, however, more than offset by the maturity of higher yielding assets, rising short-term rates and flat yield curves, resulting in less profitable reinvestment opportunities. There was also a reclassification of HK\$199 million from 'Net interest income' to 'Net income from financial instruments at fair value'.

Net fee income rose by 7.5 per cent to HK\$5,388 million, principally due to the inclusion of a full year's profits from the Bank of Bermuda businesses, which were integrated into the group at the end of 2004 and contributed HK\$1,219 million to revenues. Corporate and Institutional Banking saw an increase in fees and commissions from the securities custody and clearing business, which benefited from increased stock market activity across the region, notably in Korea and India. The group's expertise in trade services and a well-established network in Asia-Pacific were key factors in securing new business in 2005, resulting in fee growth, particularly in India. Investment banking revenues declined, reflecting a decrease in structured finance transactions, although fee income from the underwriting advisory business rose, with HSBC acting as joint global co-ordinator for three of the five largest IPOs in Hong Kong this year. These were the Hong Kong Government's HK\$22.0 billion REIT IPO, the largest ever real estate offering and REIT IPO in the world, the HK\$16.8 billion IPO by Bank of Communications and the HK\$9.5 billion IPO of China COSCO Holdings.

Net trading income increased by HK\$1,420 million, or 24.5 per cent, over 2004, notwithstanding the inclusion of the net interest expense of HK\$817 million on trading assets and liabilities this year. In Hong Kong, investments made in enhancing the structured products platform resulted in increased revenues in foreign exchange options, equity derivatives, structured credit derivatives and interest rate derivatives, but were partly offset by lower revenues generated from capital-guaranteed investment solutions provided to the personal and commercial banking businesses, as retail investors switched to deposit products in the higher interest rate environment. Debt securities trading benefited from correct positioning, with tightening in short-term corporate spreads in the low Hong Kong dollar interest rate environment in the first quarter of 2005. This was, however, partly offset by losses on certain high yield bonds, following the downgrading of certain companies in the automobile sector during the second quarter, as well as a difficult credit trading environment later in the year, reflecting low volatility in credit spreads.

In the rest of Asia-Pacific, excellent progress was made in the roll-out of structured products, particularly in Korea, Singapore and Taiwan. Foreign exchange revenues also improved, notably in Indonesia, benefiting from currency volatility and the group's growing customer franchise in the region.

There was a net release of loan impairment provisions of HK\$165 million, HK\$1,354 million lower than the release in 2004. The credit environment in Hong Kong remained stable, but there were lower releases and recoveries of individual and collective provisions this year.

Operating expenses increased by 32.3 per cent compared with 2004, reflecting higher staff costs and the inclusion of costs relating to the Asia-Pacific operations of Bank of Bermuda. Headcount increased to support business expansion, including the build up of the investment banking division and the recruitment of senior relationship managers to extend coverage along industry sector lines. The cost base was further impacted by a change in the allocation of certain centrally allocated overheads to customer groups and a rise in cost recharges in respect of global management functions.

Income from associates includes a full 12 months' share of profits from Bank of Communications and Industrial Bank attributable to Corporate, Investment Banking and Markets.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Other includes income and expenses relating to staff housing loans, certain property activities, and investment and other activities that are not allocated to other customer groups.

Net interest income was lower, reflecting an increase in preference shares issued, coupled with higher funding costs. The surplus on property revaluation and profits from property sales were higher, offset by lower gains on the disposal and revaluation of long-term investments.

1. Net interest income

	Year ended 31Dec05	Year ended 31Dec04 restated
Figures in HK\$m		
Net interest income	43,491	36,970
Average interest-earning assets	2,031,314	1,925,044
Net interest spread	1.89%	1.82%
Net interest margin	2.14%	1.92%

Net interest income of HK\$43,491 million was HK\$6,521 million, or 17.6 per cent, higher than in 2004.

Net interest income from the Personal Financial Services business rose by HK\$6,016 million, or 28.9 per cent, primarily due to improved deposit spreads resulting from rises in Hong Kong dollar and US dollar interest rates this year. This was coupled with strong growth in net interest income in the rest of Asia-Pacific, driven by increased mortgage lending in Australia, Korea, Singapore, Taiwan and India, and significant growth in credit card receivables particularly in Hong Kong, Taiwan and Indonesia. Net interest income from the

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Commercial Banking business was HK\$4,024 million, or 57.0 per cent, higher than last year, mainly due to growth in lending and deposits and improved deposit spreads in Hong Kong. Net interest income from Corporate, Investment Banking and Markets fell by HK\$2,533 million, or 22.5 per cent, largely due to the maturity of high yielding treasury assets in Hong Kong, and flat yield curves that gave limited opportunity for position-taking. This was partly offset by the effect of the reclassification this year of net interest expense of HK\$1,484 million on trading assets and liabilities to 'Trading income', which was made on adoption of the new accounting standards. Corporate lending grew in Hong Kong, mainland China, Korea and India, while deposit balances increased and spreads improved throughout the region. Included in net interest income this year is income earned on held-to-maturity investments in the insurance businesses of HK\$1,692 million, which last year was classified as 'Net investment income on assets backing policyholder liabilities', and there has been a reclassification of HK\$505 million of net interest income to 'Net income from financial instruments designated at fair value'. Both of these reclassifications were made on adoption of the new accounting standards.

Average interest-earning assets rose by HK\$106 billion, or 5.5 per cent, to HK\$2,031 billion. Average advances to customers grew by HK\$103 billion, or 11.9 per cent, with strong growth in mortgage lending in Australia, Korea, Singapore, Taiwan and India, and increases in commercial lending and trade finance in Hong Kong. Credit card receivables rose in most countries, notably Hong Kong, Taiwan and Indonesia. Average loans to banks were HK\$91 billion higher, principally in the bank in Hong Kong, and lending to fellow subsidiaries rose by HK\$18 billion, but these increases were offset by the reclassification of certain interest-earning assets to 'Trading assets' on adoption of the new accounting standards.

The Group's net interest margin of 2.14 per cent for 2005 was 22 basis points higher than 2004. The benefit to margin of the reclassification in 2005 of the net interest expense on trading assets and liabilities and net interest income from financial instruments designated at fair value was 24 basis points, and the inclusion of net interest income on held-to-maturity investments in the insurance businesses increased margin by four basis points. These benefits were, however, partly offset by higher funding costs as the rise in the number of preference shares issued and higher funding costs thereon, impacted margin by seven basis points.

For the banking operations in Hong Kong (excluding Hang Seng Bank), net interest margin increased by 46 basis points to 2.20 per cent for 2005. Spread improved by 28 basis points to 1.92 per cent. This increase was principally due to the reclassification of net interest expense on net trading liabilities to trading income. Wholesale rates increased significantly during the year as the surplus liquidity, which had kept rates depressed in prior years, was withdrawn from the system. Spreads on Hong Kong dollar and foreign currency current, savings and deposit accounts benefited, with an increase in the value of funds, although the effect was partly offset by a smaller increase in interest paid to customers. Spreads on mortgages, credit cards and corporate lending were adversely impacted by a higher cost of funds and competitive pressures on margins. The average yield on the residential mortgage portfolio, excluding Government Home Ownership Scheme ('GHOS') and staff loans, declined to 239 basis points below BLR in 2005 compared with 201 basis points below BLR in 2004. The contribution from net free funds rose by 18 basis points compared with the same period last year.

At Hang Seng Bank, net interest margin improved by 11 basis points to 2.19 per cent, reflecting the rise in deposit spreads resulting from higher interest rates and the inclusion of interest income from the held-to-maturity investment portfolios held by life assurance funds. Spread fell by six basis points, as returns on treasury products were affected by the rise in funding costs and flat yield curves, and mortgage portfolio yields continued to be affected by market competition. The average yield on the residential mortgage portfolio, excluding

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

GHOS and staff loans, fell to 225 basis points below BLR for 2005, compared with 202 basis points last year. The contribution from net free funds rose by 17 basis points, benefiting from the rise in market interest rates.

In the rest of Asia-Pacific, net interest margin at 2.00 per cent for 2005 was 4 basis points higher than in 2004. Spread improved by 4 basis points to 1.85 per cent. All major sites faced an increase in funding costs, but margins rose in several countries, notably mainland China and Indonesia from higher yields on corporate lending, in India due to higher mortgage yields and an increase in low cost current account balances from custody and clearing customers, and in Australia from higher margins on personal lending. These increases were partly offset by lower margins on mortgage advances in Taiwan and Korea, and higher treasury funding costs in Singapore. The contribution from net free funds was unchanged at 15 basis points.

2. Net fee income

Figures in HK\$m	2005	2004 restated
Account services	1,314	1,206
Credit facilities	1,159	1,447
Import/export	2,777	2,676
Remittances	1,248	1,103
Securities/stockbroking	3,402	2,842
Cards	4,231	3,439
Insurance	280	217
Unit trusts	1,627	2,488
Funds under management	2,233	1,216
Other	3,400	2,842
Fee income	21,671	19,476
Fee expense	(3,574)	(3,195)
	18,097	16,281

Net fee income was HK\$1,816 million, or 11.2 per cent, higher than 2004. Credit card fee income rose by 23.0 per cent, reflecting the increase in the number of cards in issue and higher cardholder spending. Customer demand for wealth management products slowed this year in Hong Kong, although the fall in demand for unit trusts was partially offset by increased sales of structured deposit products. The increase in contribution from the Bank of Bermuda businesses, following their integration into the group during the second half of last year, was HK\$967 million, principally from funds under management and securities/stockbroking, which also benefited from higher stock market turnover in Hong Kong and throughout the region. Credit facility fees decreased due to a change in accounting treatment whereby certain fees are now included as part of the effective interest rate and amortised through net interest income, rather than through net fee income as in prior years.

3. Net trading income

Figures in HK\$m	2005	2004 restated
------------------	------	------------------

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Dealing profits		
- Foreign exchange	5,548	4,680
- Interest rate derivatives	2,442	2,380
- Debt securities	278	(260)
- Equities and other trading	292	203
	8,560	7,003
Loss from hedging activities		
Fair value hedges		
- Net loss on hedged items attributable to the hedged risk	(1,085)	-
- Net gain on hedging instruments	1,085	-
Cash flow hedges		
- Net hedging loss	(1)	-
	(1)	-
Interest on trading assets and liabilities		
- Interest income	4,989	-
- Interest expense	(6,473)	-
	(1,484)	-
Dividend income from trading securities	105	-
	7,180	7,003

Net trading income rose by 2.5 per cent to HK\$7,180 million. Foreign exchange profits benefited from higher exchange rate volatility and the group's growing customer franchise across the region. Debt securities trading benefited from correct positioning as short-term spreads on Hong Kong dollar bonds contracted in the low interest rate environment in the earlier part of 2005, but this was partly offset by losses on certain high yield bonds following the downgrading of companies in the automobile sector during the second quarter, and low volatility in credit spreads made for a difficult credit trading environment later in the year. Interest rate derivatives trading performed satisfactorily, reflecting an enhanced capability in structured products in Hong Kong, Korea and Singapore, which more than offset the fall in demand for wealth management products in Hong Kong as customers switched to deposit products in the higher interest rate environment. Equity and structured credit derivatives revenues also grew despite narrow credit spreads and low volatility in the market, and realised gains were made on the disposal of certain private equity investments.

Net interest expense on trading assets and liabilities largely represents interest payable on the group's own debt and structured deposits managed in the trading book, partly offset by interest income on debt securities. All such interest was classified under 'Net interest income' in prior years.

4. Gains less losses from financial investments

Figures in HK\$m	2005	2004 restated
Profit on disposal of available-for-sale securities	762	-
Profit on disposal of long-term investments	-	1,311
Reversal of impairment of long-term investments	-	186

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Other	(6)	-
	756	1,497

The profit on disposal of available-for-sale securities primarily comprises gains on the sale of equity securities, partly offset by losses on the disposal of US dollar bonds.

The profit on disposal of long-term investments in 2004 comprised gains from the sale of equity investments in Hong Kong.

In 2004, there was a partial write-back of a provision against an equity investment.

5. Dividend income

Figures in HK\$m	2005	2004 restated
Listed investments	102	100
Unlisted investments	266	63
	368	163

6. Net earned insurance premiums

Figures in HK\$m	2005	2004 restated
Gross insurance premium income	19,850	14,610
Less: reinsurance premiums	(510)	(525)
	19,340	14,085

Premium income was HK\$5,255 million, or 37.3 per cent, higher than 2004, attributable to an enhanced range of life assurance and general insurance products, coupled with successful sales and marketing initiatives.

7. Other operating income

Figures in HK\$m	2005	2004 restated
Rental income from investment properties	215	211
Movement in present value of in force insurance business	1,185	833
Profit on disposal of property, plant and equipment	104	192
Profit on disposal of subsidiaries and associates	53	342
Surplus arising on property revaluation	1,537	1,038
Other	1,803	1,498
	4,897	4,114

Profit on disposal of subsidiaries and associates for 2005 comprises a gain made on the sale of HSBC Asset Management (Australia) Limited. Profit for 2004

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

included a gain on the exchange of the group's interest in World Finance International Limited, an associated company, for an interest in Bergesen Worldwide.

The surplus arising on property revaluation comprises gains on the revaluation of investment properties and the reversal of previous revaluation deficits that had arisen when the value of certain premises fell below depreciated historical cost. As permitted by the revised Hong Kong Accounting Standard 40, prior year profit and loss figures have not been restated to include revaluation gains on investment properties.

'Other' includes profits on the sale of a residential property in Hong Kong held on an operating lease, and miscellaneous income from fellow HSBC Group subsidiary companies representing recoveries of shared operating costs.

8. Loan impairment charges and other credit risk provisions

Figures in HK\$m	2005	2004 restated
Net charge/(release) for impairment provisions		
Advances to customers		
- Individually assessed impairment provisions^		
New provisions	2,127	4,016
Releases	(1,755)	(2,450)
Recoveries	(267)	(617)
	105	949
- Net charge/(release) for collectively assessed impairment provisions^^	1,961	(1,723)
- Country risk provisions	2	-
	2,068	(774)
Placings with banks maturing after one month		
- Net release of individually assessed provisions^	-	(1)
	2,068	(775)
Net release of other credit risk provisions	(4)	(87)
Net charge/(release) for loan impairment and other credit risk provisions	2,064	(862)

^ Individually assessed impairment provisions in 2004 refer to specific provisions.

^^ Collectively assessed impairment provisions in 2004 refer to general provisions.

There was a net charge for loan impairment and other credit risk provisions of HK\$2,064 million compared with a net release of HK\$862 million in 2004. The charge for new individually assessed provisions was lower as credit card provisions were classified as individual in 2004, but collective in 2005. New individually assessed provisions against mortgages and other personal lending fell, in line with the improving economy in Hong Kong, with lower bankruptcies, falling unemployment and a rise in property prices, although new provisions against commercial banking customers in Hong Kong increased. Releases and recoveries were lower, largely relating to corporates in Hong Kong, Singapore and Thailand, but this was partly offset by higher releases against personal lending in Hong Kong and against lending to commercial banking customers in mainland China. There was a net charge for collectively assessed provisions,

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

reflecting the reclassification of credit card provisions as collectively assessed, and a small charge against corporate lending, reflecting a rise in lending while the credit environment across the region was stable. The net charge for provisions against credit card lending rose by 35.3 per cent, attributable to the increase in delinquency levels in Taiwan, coupled with growth in receivables throughout the region.

9. Employee compensation and benefits

Figures in HK\$m	2005	2004 restated
Wages, salaries and other costs	16,428	13,816
Social security costs	238	184
Retirement benefit costs	1,070	765
	17,736	14,765

Staff numbers by region[^]

	At 31Dec05	At 31Dec04
Hong Kong	24,842	23,947
Rest of Asia-Pacific	25,956	21,009
Americas/Europe	18	16
Total	50,816	44,972

[^] Full-time equivalent

Staff costs increased by HK\$2,971, or 20.1 per cent, compared with 2004, attributable to the increase in headcount throughout the region of 5,844. Staff numbers rose in all customer groups, notably in Personal Financial Services in India, Taiwan, Korea and Indonesia, in Commercial Banking in Hong Kong and mainland China, and in Corporate, Investment Banking and Markets as the build-up of the investment banking division in Hong Kong was substantially completed. Headcount in the Group Service Centre in Guangdong rose by more than 1,000 in order to support the expansion in processing work. Performance-related remuneration increased in line with the improved operating profits.

10. General and administrative expenses

Figures in HK\$m	2005	2004 restated
Premises and equipment		
- Rental expenses	1,243	1,144
- Amortisation of prepaid operating lease payments	56	55
- Other premises and equipment	2,089	1,761
	3,388	2,960
Other administrative expenses	8,394	7,202
Litigation and other provisions	313	131
	12,095	10,293

The increase in general and administrative expenses of HK\$1,802 million, or 17.5 per cent, reflected additional costs incurred in business expansion throughout

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

the region. Advertising and marketing expenditure increased in Hong Kong, Korea, Taiwan, Thailand and India, in line with the growth in the Personal Financial Services business in these countries. Technology costs increased as the group's growth initiatives required investment in systems and the development of distribution channels. Other general expenses, including rental, communications and travel costs increased in support of business expansion across the region.

11. Share of profit in associates

Share of profit in associates in 2005 included the group's share of post-tax profits from Bank of Communications and Industrial Bank, and amortisation of intangible assets arising on acquisition, for the 12 months to 30 September 2005. In 2004, this included share of profits and amortisation for the period from the date of acquisition (August 2004 and May 2004 for Bank of Communications and Industrial Bank respectively) to 30 September 2004.

12. Tax expense

The charge for taxation in the consolidated income statement comprises:

Figures in HK\$m	2005	2004 restated
Current income tax		
- Hong Kong profits tax	4,974	3,982
- Overseas taxation	2,598	2,497
Deferred taxation	479	509
	8,051	6,988

The effective rate of tax for 2005 was 17.8 per cent compared with 16.1 per cent in 2004, largely as a result of the interest expense on preference shares for which tax relief is not available, and a different product and geographic mix of taxable profits.

13. Dividends

	2005		2004	
	HK\$ per share	HK\$m	HK\$ per share	HK\$m
Dividends paid on ordinary share capital				
- in respect of the previous financial year, approved and paid during the year	0.53	4,800	1.30	8,450
- in respect of the current financial year	1.76	15,800	2.18	15,500
	2.29	20,600	3.48	23,950

The Directors have declared a fourth interim dividend in respect of the financial year ending 31 December 2005 of HK\$4,500 million (HK\$0.50 per ordinary share).

14. Trading assets

Figures in HK\$m	At 31Dec05	At 31Dec04 restated
Debt securities	108,687	82,159
Equity shares	22,677	5,573
Treasury bills	69,880	-

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Other	14,437	-
	215,681	87,732

Treasury bills held for trading have been reclassified from 'Cash and short-term funds' to 'Trading assets' on adoption of HKAS 39.

15. Financial assets designated at fair value

Figures in HK\$m	At 31Dec05	At 31Dec04 restated
Debt securities	15,070	-
Equity shares	18,320	-
Treasury bills	94	-
Other	3,589	-
	37,073	-

Financial assets designated at fair value are assets which have been designated as such so that movements in their fair value can be taken to the income statement rather than reserves (see Accounting policies Note (f)).

This classification in 2005 was made on adoption of HKAS 39. There was no such category in 2004.

16. Advances to customers

Figures in HK\$m	At 31Dec05	At 31Dec04 restated
Gross advances to customers	1,005,902	927,121
Impairment allowances		
- Individually assessed [^]	(2,963)	(5,482)
- Collectively assessed ^{^^}	(3,600)	(2,447)

At 31Dec04 (restated)				

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Advances to customers which are considered to be impaired are as follows:

Gross impaired advances [^]	5,423	4,268	5	9,696
Individually assessed allowances ^{^^}	(2,485)	(2,992)	(5)	(5,482)
	2,938	1,276	-	4,214
Individually assessed allowances as a percentage of gross impaired advances	45.8%	70.1%	100.0%	56.5%
Gross impaired advances as a percentage of gross advances to customers	0.9%	1.3%	35.7%	1.0%

Impaired advances to customers are those advances where objective evidence exists that full repayment of principal or interest is considered unlikely.

The individually assessed allowances are made after taking into account the value of collateral in respect of such advances.

[^] Impaired advances in 2004 refer to non-performing advances.

^{^^} Individually assessed allowances in 2004 refer to specific provisions.

19. Overdue advances to customers

Figures in HK\$m	Hong Kong	Rest of Asia-Pacific	Americas/ Europe	Total
At 31Dec05				
Gross advances to customers which have been overdue with respect to either principal or interest for periods of:				
- six months or less but over three months	1,073	891	-	1,964
- one year or less but over six months	272	430	-	702
- over one year	1,053	1,071	-	2,124
	2,398	2,392	-	4,790
Overdue advances to customers as a percentage of gross advances to customers:				
- six months or less but over three months	0.2%	0.2%	-	0.2%
- one year or less but over six months	-	0.1%	-	0.1%

At 31Dec04 (restated)

Gross advances to customers which have been overdue with respect to either principal or interest for periods of:

- six months or less but over three months	959	706	-	1,665
- one year or less but over six months	607	296	-	903
- over one year	1,631	1,430	-	3,061
	3,197	2,432	-	5,629

Overdue advances to customers as a percentage of gross advances to customers:

- six months or less but over three months	0.1%	0.2%	-	0.2%
- one year or less but over six months	0.1%	0.1%	-	0.1%
- over one year	0.3%	0.4%	-	0.3%
	0.5%	0.7%	-	0.6%

20. Rescheduled advances to customers

Figures in HK\$m	Hong Kong	Rest of Asia-Pacific	Americas/ Europe	Total
At 31Dec05				
Rescheduled advances to customers	1,941	623	-	2,564
Rescheduled advances to customers as a percentage of gross advances to customers	0.3%	0.2%	-	0.3%
At 31Dec04 (restated)				
Rescheduled advances to customers	4,009	465	5	4,479
Rescheduled advances to customers as a percentage of gross advances to customers	0.7%	0.1%	35.7%	0.5%

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Rescheduled advances are those advances which have been restructured or renegotiated because of a deterioration in the financial position of the borrower, or because of the inability of the borrower to meet the original repayment schedule.

Rescheduled advances to customers are stated net of any advances which have subsequently become overdue for over three months and which are included in overdue advances to customers (Note 19).

21. Analysis of advances to customers based on categories used by the HSBC Group

The following analysis of advances to customers is based on categories used by the HSBC Group, including The Hongkong and Shanghai Banking Corporation Limited and its subsidiary companies, to manage associated risks.

Figures in HK\$m	Hong Kong	Rest of Asia-Pacific	Americas/ Europe	Total
At 31Dec05				
Residential mortgages	182,257	117,211	4	299,472
Hong Kong SAR Government's Home Ownership Scheme, Private Sector Participation Scheme and Tenants Purchase Scheme mortgages	36,291	-	-	36,291

Total financial	18,478	9,620	-	28,098
Gross advances to customers	593,783	333,324	14	927,121
Impairment allowances	(4,032)	(3,892)	(5)	(7,929)
Net advances to customers	589,751	329,432	9	919,192

Advances to customers increased by HK\$80 billion, or 8.7 per cent, since the end of 2004.

Advances in Hong Kong grew by HK\$31 billion, or 5.3 per cent, since the end of 2004, on account of the buoyant economy. Mortgage lending fell, attributable to persistent price competition in a flat market, and lending under the GHOS continued to decline as the scheme remained suspended during 2005. Other personal lending rose, mainly on credit cards, reflecting the increase in cardholder spending. Corporate and commercial lending rose by 11.0 per cent, with particularly strong growth in the manufacturing sector and property investment.

In the rest of Asia-Pacific, advances rose by HK\$49 billion, or 14.8 per cent, since the end of 2004, reflecting successful business expansion across the region. Mortgage advances increased by 19.0 per cent, principally in Korea, Singapore, Taiwan and India. Credit card receivables grew by 31.7 per cent, largely in Taiwan, India, the Philippines and India. Lending to corporate and commercial customers rose by 9.1 per cent, most significantly in mainland China, Korea and India.

22. Analysis of advances to customers by geographical area according to the location of counterparties, after risk transfer

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Figures in HK\$m	Hong Kong	Rest of Asia-Pacific	Americas/ Europe	Others	Total

Gross advances to customers for use outside Hong Kong made by branches of the bank and subsidiary companies in Hong Kong	31,989	20,747
Gross advances to customers made by branches of the bank and subsidiary companies in Hong Kong	624,156	593,783
Gross advances to customers made by branches of the bank and subsidiary companies outside Hong Kong		
- Rest of Asia-Pacific	381,741	333,324
- Americas/Europe	5	14
Gross advances to customers	1,005,902	927,121

An explanation of the significant differences between the categories of advances and their definitions used by the HSBC Group and those used by the HKMA is given on page 18 of the Annual Report and Accounts for 2004.

24. Cross-border exposure

The country risk exposures shown below are prepared in accordance with the HKMA Return of External Positions Part II: Cross-Border Claims (MA(BS)9) guidelines.

Cross-border claims are on-balance sheet exposures to counterparties based on the location of the counterparties after taking into account the transfer of risk.

The tables show claims on individual countries and territories or areas, after risk transfer, amounting to 10 per cent or more of the aggregate cross-border claims.

Cross-border risk is controlled centrally through a well-developed system of country limits and is frequently reviewed to avoid concentration of transfer, economic or political risk.

Figures in HK\$m	Banks and other financial institutions	Public sector entities	Other	Total
At 31Dec05				
Americas

	419,194	4,246	45,462	468,902
Asia-Pacific excluding Hong Kong	151,183	18,454	77,266	246,903

25. Customer accounts

Figures in HK\$m	At 31Dec05	At 31Dec04 restated
Current accounts and demand deposits	925,008	1,069,178
Savings accounts	664,478	516,237
Other deposit accounts	145,624	142,696
	1,735,110	1,728,111

Customer accounts increased by HK\$7 billion compared with the end of 2004.

Certain structured deposits that were previously recorded in 'Other deposit accounts' have, in accordance with revised accounting standards, been reclassified in 2005 to 'Trading liabilities'. Excluding the effect of this reclassification, customer accounts rose by HK\$84 billion, or 4.9 per cent.

In Hong Kong, customer accounts, including accounts reclassified as trading, increased by HK\$20.0 billion, or 1.5 per cent. Current accounts and demand deposits fell by HK\$161 billion reflecting the shift into savings and time deposits as interest rates rose during 2005, coupled with a net outflow of deposits from personal customers attributable to intense market competition in the higher interest rate environment. Customer account balances, including trading accounts, in Commercial Banking and Corporate, Investment Banking and Markets increased by HK\$43 billion, or 10.2 per cent, reflecting the success of the group's cash management capabilities in attracting new deposits from small and larger businesses alike.

In the rest of Asia-Pacific, customer accounts, including trading accounts, rose by HK\$65 billion, or 15.7 per cent. Deposits from personal customers increased by 8.5 per cent, notably in mainland China, Singapore and Indonesia. Deposits in Commercial Banking and Corporate, Investment Banking and Markets grew by 19.6 per cent, with increases in mainland China, India, Korea, Singapore, Brunei and Taiwan, attributable to business expansion, particularly in the payments and cash management business, and higher balances from securities custody and clearing customers.

The group's advances-to-deposits ratio increased to 57.6 per cent at 31 December 2005 from 53.2 per cent at 31 December 2004.

26. Trading liabilities

Figures in HK\$m	At 31Dec05	At 31Dec04 restated
Certificates of deposit in issue	83,937	-
Other debt securities in issue	20,361	-
Short positions in securities	55,025	37,281

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Deposits by banks	13,488	-
Customer accounts	77,387	-
	250,198	37,281

Trading liabilities include customer deposits, certificates of deposit and other debt securities in issue, which may contain embedded options or other derivatives, the market risk of which is managed in the trading book. In prior years, these liabilities were not shown separately.

The reclassification in 2005 was made on adoption of HKAS 39.

27. Financial liabilities designated at fair value

Figures in HK\$m	At 31Dec05	At 31Dec04 restated
Deposits by banks	360	-
Customer accounts	1,600	-
Subordinated liabilities	967	-
	2,927	-

Financial liabilities designated at fair value are liabilities which have been designated as such so that movements in their fair value can be taken to the income statement rather than reserves (see Accounting policies Note (f)).

This classification in 2005 was made on adoption of HKAS 39. There was no such category in 2004.

28. Debt securities in issue

Figures in HK\$m	At 31Dec05	At 31Dec04 restated
Certificates of deposit	49,068	110,922
Other debt securities	12,400	44,240
	61,468	155,162

The fall in debt securities in issue compared with the end of 2004 reflects the reclassification of certain securities as 'Trading liabilities' and 'Financial assets designated at fair value', as detailed in Notes 26 and 27. The reclassification was made on adoption of HKAS 39 in 2005.

29. Reserves

Figures in HK\$m	At 31Dec05	At 31Dec04 restated
Other reserves		
- Property revaluation reserve	4,082	3,065
- Available-for-sale investment reserve	2,899	-
- Long-term equity investment revaluation reserve	-	1,799
- Cash flow hedge reserve	(1,767)	-
- Foreign exchange reserve	53	843
- Other	770	322
	6,037	6,029
Retained profits	64,303	50,484
Total reserves	70,340	56,513

30. Derivatives

Derivatives are financial instruments that derive their value from the price of

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

an underlying item such as equities, bonds, interest rates, foreign exchange rates, credit spreads, commodity prices and equity or other indices.

Derivatives enable users to increase, reduce or alter exposure to credit or market risks. The group makes markets in derivatives for its customers and uses derivatives to manage its exposure to credit and market risks.

Derivatives are carried at fair value and are shown in the balance sheet as separate totals of assets and liabilities. Asset and liability values represent the cost to the group of replacing all transactions, with positive or negative fair value respectively, assuming that all of the group's relevant counterparties default at the same time, and that the transactions can be replaced instantaneously.

Derivative assets and liabilities on different transactions are only netted if the transactions are with the same counterparty, a legal right of set-off exists and the cash flows are intended to be settled on a net basis. Changes in the values of derivatives are recognised in 'Net trading income' or 'Net income from financial instruments designated at fair value' unless they qualify as hedges for accounting purposes.

Figures in HK\$m	2005		2004	
	Assets	Liabilities	Assets	Liabilities
Fair values of derivative open positions held for trading purposes				
Exchange rate	31,074	29,254	54,247	54,302
Interest rate	36,004	35,739	38,430	36,185
Equity	1,388	2,570	1,475	1,518

Commodity and other	288	568	6	6
	69,724	70,933	94,398	92,362
Fair values of outstanding derivatives designated as fair value hedges				
Interest rate	658	437	-	-
Fair values of outstanding derivatives designated as cash flow hedges				
Interest rate	1,657	639	-	-
Total	72,039	72,009	94,398	92,362

The tables below give the nominal contract amounts, credit equivalent amounts and risk-weighted amounts of off-balance sheet transactions. The credit equivalent amounts are calculated for the purposes of deriving the risk-weighted amounts. These are assessed in accordance with the Third Schedule of the Hong Kong Banking Ordinance on capital adequacy and depend on the status of the counterparty and the maturity characteristics. The risk weights used range from

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

zero per cent to 50 per cent for exchange rate and interest rate contracts, and from zero per cent to 100 per cent for other derivative contracts. The group has executed close-out netting agreements with certain counterparties, which allow for positive and negative mark-to-market values on different transactions to be offset and settled by a single payment in the event of default by either party. These have been taken into account in calculating total risk assets.

Derivatives arise from futures, forward, swap and option transactions undertaken by the group in the foreign exchange, interest rate, equity, credit and commodity markets. The contract amounts of these instruments indicate the volume of transactions outstanding at the balance sheet date; they do not represent amounts at risk.

Figures in HK\$m	Contract amount	2005 Credit equivalent amount	Risk-weighted amount	Contract amount	2004 Credit equivalent amount	Risk-weighted amount
Exchange rate contracts:						
- Spot and forward foreign exchange	2,536,795	36,655	9,753	2,411,793	46,694	11,111

- under one year	752,797	-	-
	910,504	72,728	53,770

At 31Dec04

Contingent liabilities

- Acceptances and endorsements	22,714	4,559	4,423
- Guarantees	87,243	65,884	48,837
- Other	35	35	33
	109,992	70,478	53,293

Commitments

- Documentary credits and short-term trade-related transactions	48,493	13,770	9,591
- Forward asset purchases and forward forward deposits placed	10,166	10,166	3,716
- Undrawn note issuing and revolving underwriting facilities	4,116	2,058	1,680
- Undrawn formal standby facilities, credit lines and other commitments:			
- one year and over	82,142	41,071	38,311
- under one year	657,682	-	-
	802,599	67,065	53,298

The tables above give the nominal contract amounts, credit equivalent amounts and risk-weighted amounts of contingent liabilities and commitments. The credit equivalent amounts are calculated for the purposes of deriving the risk-weighted amounts. These are assessed in accordance with the Third Schedule of the Hong Kong Banking Ordinance on capital adequacy and depend on the status of the counterparty and the maturity characteristics. The risk-weights used range from 0 per cent to 100 per cent for contingent liabilities and commitments.

Contingent liabilities and commitments are credit-related instruments which include letters of credit, guarantees and commitments to extend credit. The contract amounts represent the amounts at risk should the contract be fully drawn upon and the client default. Since a significant portion of guarantees and commitments is expected to expire without being drawn upon, the total of the contract amounts is not representative of future liquidity requirements.

In 2005, assets and liabilities relating to acceptances and endorsements were recognised on the balance sheet, and have been included in 'Other assets' and 'Other liabilities'. This reclassification was made on adoption of the new accounting standards.

32. Foreign exchange exposure

The group had the following structural foreign currency exposures which exceeded 10 per cent of the net structural foreign currency exposure in all currencies:

Figures in HK\$m	Net structural position
At 31Dec05	
Chinese renminbi	32,510
Indian rupees	7,979
United States dollars	11,780

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

At 31Dec04 (restated)

Australian dollars	4,911
Chinese renminbi	17,398
Indian rupees	5,808
United States dollars	7,476

The group had the following non-structural foreign currency positions which exceeded 10 per cent of the group's net foreign currency non-structural positions in all currencies:

Figures in HK\$m	United States dollars	Singapore dollars	Brunei dollars
At 31Dec05

34. Analysis of cash and cash equivalents

a. Changes in cash and cash equivalents during the year

Figures in HK\$m	2005	2004 restated
Balance at 1 January	403,545	314,861
Net cash inflow before the effect of foreign exchange movements	56,138	81,548
Effect of foreign exchange movements	(15,169)	7,136
Balance at 31 December	444,514	403,545

b. Analysis of balances of cash and cash equivalents in the consolidated balance sheet

Figures in HK\$m	2005	2004 restated
Cash in hand and current balances with banks	86,882	54,509
Items in the course of collection from other banks	17,782	13,479
Placings with banks	310,396	336,292
Treasury bills	45,484	17,916
Certificates of deposit	4,897	4,801
Less: items in the course of transmission to other banks	(20,927)	(23,452)
	444,514	403,545

The difference between the amounts above and the amounts included in the consolidated balance sheet reflects treasury bills and certificates of deposit with an initial maturity of more than 3 months.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

c. Analysis of net outflow of cash and cash equivalents in respect of acquisition of and increased shareholding in subsidiary companies

Figures in HK\$m	2005	2004 restated
Cash consideration	(2,391)	(972)
Cash and cash equivalents acquired	747	-
	(1,644)	(972)

d. Analysis of net flow of cash and cash equivalents in respect of sale of subsidiary companies

Figures in HK\$m	2005	2004
Sale proceeds	151	63
Cash and cash equivalents transferred	-	(24)
	151	39

35. Segmental analysis

The allocation of earnings reflects the benefits of shareholders' equity to the extent that these are actually allocated to businesses in the segment by way of intra-group capital and funding structures. Common costs are included in segments on the basis of the actual recharges made. Geographical information has been classified by the location of the principal operations of the subsidiary company or, in the case of the bank, by the location of the branch responsible for reporting the results or advancing the funds. Due to the nature of the group structure, the analysis of profits shown below includes intra-group items between geographical regions.

Income statement

Interest income and interest expense include intra-group interest of HK\$5,082 million (2004: HK\$2,964 million). Fee income and fee expense include intra-group fees of HK\$489 million (2004: HK\$308 million). Other operating income and operating expenses include intra-group items of HK\$2,736 million (2004: HK\$1,306 million).

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

36. Capital adequacy

The table below sets out an analysis of regulatory capital and capital adequacy ratios for the group.

Figures in HK\$m	31Dec05	31Dec04 [^]
Composition of capital		
Tier 1:		
Shareholders' funds	97,334	147,495
Less: proposed dividend	(4,500)	(4,800)
property revaluation reserves ^{^^}	(7,892)	(11,907)
available-for-sale investments and equity revaluation reserves ^{^^^}	(3,051)	(1,609)
classified as regulatory reserve ^{^^^^}	(1,319)	-
term preference shares	-	(3,886)
goodwill	(3,784)	(5,771)
others	1,769	-
Irredeemable non-cumulative preference shares	51,587	-
Minority interests ^{^^^^}	14,808	14,384
Total qualifying tier 1 capital	144,952	133,906
Tier 2:		
Property revaluation reserves (@70%)	5,524	7,977
Available-for-sale investments and equity revaluation reserves (@70%)	2,136	1,126
Collective impairment provision and regulatory reserve	5,112	2,447
Perpetual subordinated debt	9,359	9,328
Term subordinated debt	6,117	1,814
Term preference shares	3,877	3,109
Irredeemable cumulative preference shares	16,516	-
Total qualifying tier 2 capital	48,641	25,801
Deductions	(39,528)	(20,251)
Total capital	154,065	139,456
Risk-weighted assets	1,238,164	1,173,432

[^] Comparative amounts for 31 December 2004 are as previously reported.

^{^^} Includes the revaluation surplus on investment properties, which is now reported as part of retained profits.

^{^^^} Includes adjustments made in accordance with guidelines issued by HKMA.

^{^^^^} The regulatory reserve is maintained for the purpose of satisfying the Banking Ordinance for prudential supervision. Movements in this reserve are made in consultation with the HKMA.

^{^^^^^} After deduction of minority interests in unconsolidated subsidiary companies.

The group's capital adequacy ratios adjusted for market risks calculated in accordance with the HKMA Guideline on 'Maintenance of Adequate Capital Against Market Risks' are as follows:

	31Dec05	31Dec04
Total capital	12.4%	11.9%
Tier 1 capital	11.7%	11.4%

The group's capital adequacy ratios calculated in accordance with the provisions

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

of the Third Schedule of the Banking Ordinance, which does not take into account market risks, are as follows:

Total capital	12.0%	11.9%
Tier 1 capital	11.2%	11.4%

37. Liquidity ratio

The Banking Ordinance requires banks operating in Hong Kong to maintain a minimum liquidity ratio, calculated in accordance with the provisions of the Fourth Schedule of the Banking Ordinance, of 25 per cent. This requirement applies separately to the Hong Kong branches of the bank and to those subsidiary companies which are Authorised Institutions under the Banking Ordinance in Hong Kong.

	2005	2004
The average liquidity ratio for the period was as follows:		

Hong Kong branches of the bank	48.2%	41.7%
--------------------------------	-------	-------

38. Property revaluation

The group's premises and investment properties were revalued as at 30 September 2005 and updated for any material changes at 31 December 2005. The basis of valuation was open market value.

Premises and investment properties in the Hong Kong SAR, the Macau SAR and mainland China, which represent 95 per cent by value of the group's properties subject to valuation, were valued by DTZ Debenham Tie Leung Limited. The valuations were carried out by independent qualified valuers who are members of the Hong Kong Institute of Surveyors. Properties in 11 other countries, which represent 5 per cent by value of the group's properties, were valued by different, independent, professionally qualified valuers.

The September property revaluation, together with the revaluation of Hong Kong properties undertaken in June 2005, has resulted in an increase in the group's revaluation reserves of HK\$1,017 million, net of deferred taxation of HK\$307 million, and a credit to the income statement of HK\$1,537 million, of which HK\$1,167 million represents the surplus on the revaluation of investment properties and HK\$370 million relates to the reversal of previous revaluation deficits that had arisen when the value of certain premises fell below depreciated historical cost.

39. Transition to new Hong Kong Financial Reporting Standards and comparative figures

The group has adopted new and revised Hong Kong Financial Reporting Standards and Hong Kong Accounting Standards ('new HKFRS') which are broadly equivalent to International Financial Reporting Standards, and are effective for accounting periods beginning on or after 1 January 2005.

The adoption of the new HKFRS has resulted in changes to the group's accounting policies which have affected the amounts reported for the current and prior year. Comparative numbers have been restated to conform with the new accounting policies, except for those applicable to financial instruments (HKAS 39).

Included in the appendix to this news release is the reconciliation of the consolidated income statement for 2004 and of the consolidated balance sheet at 31 December 2004, as previously reported and as restated, showing the effects of

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

the adoption of the new HKFRS (except HKAS 39). Also included in the appendix is the restatement of the opening consolidated balance sheet at 1 January 2005, showing the effects of the adoption of HKAS 39.

40. Accounting policies

The accounting policies adopted in 2005 and 2004, and a summary of the effects of the significant changes, are detailed in the appendix to this news release.

41. Statutory accounts

The information in this news release is not audited and does not constitute statutory accounts.

Certain financial information in this news release is extracted from the statutory accounts for the year ended 31 December 2005 which were approved by the Board of Directors on 6 March 2006 and will be delivered to the Registrar of Companies and the Hong Kong Monetary Authority. The Auditors expressed an unqualified opinion on those statutory accounts in their report dated 6 March 2006. The Annual Report and Accounts for the year ended 31 December 2005, which include the statutory accounts, can be obtained on request from Group Public Affairs, The Hongkong and Shanghai Banking Corporation Limited, 1 Queen's Road Central, Hong Kong, and may be viewed on our website: www.hsbc.com.hk on or after 4 April 2006.

42. Ultimate holding company

The Hongkong and Shanghai Banking Corporation Limited is an indirectly-held, wholly-owned subsidiary of HSBC Holdings plc.

Appendix

1. Accounting policies

a Interest income and expense

From 1 January 2005

Interest income and expense for all interest-bearing financial instruments, except those classified as held-for-trading or designated at fair value, are recognised in 'Interest income' and 'Interest expense' in the income statement using the effective interest rates of the financial assets or financial liabilities to which they relate.

The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial asset or financial liability to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the group estimates cash flows considering all contractual terms of the financial instrument but not future credit losses. The calculation includes all amounts paid or received by the group that are an integral part of the effective interest rate, including transaction costs and all other premiums or discounts.

Interest on impaired financial assets is recognised at the original effective interest rate of the financial asset applied to the impaired carrying amount. The accounting policy for recognising impairment of loans and advances is set out in Note (d) below.

From 1 January 2004 to 31 December 2004

Interest income was recognised in the income statement as it accrued, except in the case of impaired loans and advances. Interest on impaired loans was not

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

recognised in the income statement, but was credited to an interest suspense account in the balance sheet which was netted against the relevant loan.

b Non-interest income

(i) Fee income

From 1 January 2005

The group earns fee income from a diverse range of services it provides to its customers. Fee income is accounted for as follows:

- if the income is earned on the execution of a significant act, it is recognised as revenue when the significant act has been completed (for example, fees arising from negotiating, or participating in the negotiation of, a transaction for a third party, such as the arrangement for the acquisition of shares or other securities);
- if the income is earned as services are provided, it is recognised as revenue as the services are provided (for example, asset management, portfolio and other management advisory and service fees); and
- if the income is an integral part of the effective interest rate of a financial instrument, it is recognised as an adjustment to the effective interest rate (for example, loan commitment fees) and recorded in 'Interest income' (see Note (a) above).

From 1 January 2004 to 31 December 2004

Fee income was accounted for as follows:

- income earned on the execution of a significant act and income earned as services were provided, were recognised as revenue on the same basis as described above for 2005;
- if the income was clearly interest in nature, it was recognised on an appropriate basis over the relevant period and recorded in 'Interest income' (see Note (a) above).

(ii) Dividend income

Dividend income is recognised when the right to receive payment is established. This is the ex-dividend date for equity securities.

(iii) Net income from financial instruments designated at fair value

From 1 January 2005

Net income from financial instruments designated at fair value comprises all gains and losses from changes in the fair value (net of accrued coupon) of such financial assets and financial liabilities, together with interest income and expense and dividend income attributable to those financial instruments.

There was no such category for financial instruments prior to 1 January 2005.

(iv) Net trading income

From 1 January 2005

Net trading income comprises interest income and expense and dividend income attributable to trading financial assets and liabilities, together with all gains and losses from changes in fair value. Income and expense arising from economic hedging activities which do not qualify for hedge accounting under HKAS 39, as well as from the ineffective portion of qualifying hedges, are also

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

included in 'Net trading income'.

From 1 January 2004 to 31 December 2004

Net trading income comprised all gains and losses from changes in fair value (net of accrued coupons) of trading financial assets and financial liabilities.

Interest income and expense, and dividend income, were recognised in 'Net interest income' or 'Dividend income' as appropriate.

c Advances to customers and placings with banks

From 1 January 2005

Advances to customers and placings with banks are loans and advances originated by the group, which have not been classified as held for trading or designated at fair value. Loans and advances are recognised when cash is advanced to borrowers. They are initially recorded at fair value plus any transaction costs, and are subsequently measured at amortised cost using the effective interest method, less impairment losses.

Loans and advances classified as held for trading or designated at fair value are reported as 'Trading assets' or 'Financial assets designated at fair value' respectively (see Notes (e) and (f) below).

From 1 January 2004 to 31 December 2004

Advances to customers and placings with banks included loans and advances originated by the group, which were not intended to be sold in the short term and had not been classified as held for trading. Loans and advances were recognised when cash was advanced to borrowers. They were measured at cost plus or minus amortisation of discounts or premiums as appropriate, less provisions for impaired loans and advances.

d Loan impairment

From 1 January 2005

It is the group's policy to make provisions for impaired loans and advances promptly where there is objective evidence that impairment of a loan or portfolio of loans has occurred.

Impairment losses are assessed for all credit exposures. Loans that are individually significant are assessed and where impairment is identified, impairment losses are recognised. Loans that have been subject to individual assessment, but for which no impairment has been identified, are then assessed collectively to estimate the amount of impairment at the reporting date, which has not been specifically identified. Loans which are not individually significant, but which can be aggregated into groups of exposures sharing similar characteristics, are then assessed collectively to identify and calculate impairment losses which have occurred by the reporting date. This methodology is explained in greater detail below.

Impairment losses are only recognised when there is evidence that they have been incurred prior to the reporting date. Losses which may be expected as a result of future events, no matter how likely, are not recognised.

(i) Individually significant loans

Impairment losses on individually significant accounts are assessed by an evaluation of the exposures on a case-by-case basis. The group assesses at each reporting date whether there is any objective evidence that a loan is impaired.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

This procedure is applied to all accounts that are considered individually significant. In determining the impairment losses on individually assessed accounts, the following factors are considered:

- the group's aggregate exposure to the customer;
- the viability of the customer's business model and capability to trade successfully out of financial difficulties and generate sufficient cash flow to service their debt obligations;
- the amount and timing of expected receipts and recoveries;
- the likely dividend available on liquidation or bankruptcy;
- the extent of other creditors' commitments ranking ahead of, or *pari passu* with, HSBC and the likelihood of other creditors continuing to support the company;
- the complexity of determining the aggregate amount and ranking of all creditor claims and the extent to which legal and insurance uncertainties are evident;
- the realisable value of security (or other credit mitigants) and likelihood of successful repossession;
- the likely deduction of any costs involved in recovery of amounts outstanding;
- the ability of the borrower to obtain and make payments in the relevant foreign currency if loans are not in local currency; and
- where available, the secondary market price for the debt.

The impairment loss is calculated by comparing the present value of the expected future cash flows, discounted at the original effective interest rate of the loan, with its current carrying value and the amount of any loss is charged to the income statement. The carrying amount of impaired loans is reduced through the use of an allowance account.

(ii) Collectively assessed loans

Impairment losses are calculated on a collective basis in two different scenarios:

- in respect of losses which have been incurred but have not yet been identified on loans subject to individual assessment for impairment (see section (i) above); and
- for homogeneous groups of loans that are not considered individually significant.

Incurring but not yet identified impairment

Where loans have been individually assessed and no evidence of loss has been identified, these loans are grouped together on the basis of similar credit risk characteristics for the purpose of calculating a collective impairment loss. The loss calculated by this method represents impairments that have occurred at the balance sheet date but which will not be individually identified as such until some time in the future.

The collective impairment loss is determined after taking into account:

- historical loss experience in portfolios of similar risk characteristics (for example, by industry and geographical sectors, loan grade or product);
- the estimated period between a loss occurring and the establishment of an allowance against the loss on an individual loan; and
- management's experienced judgement as to whether the current economic and credit conditions are such that the actual level of inherent losses is likely to be greater or less than that suggested by historical experience.

The estimated period between a loss occurring and its identification is

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

determined by management for each identified portfolio.

Homogeneous groups of loans

For homogeneous groups of loans that are not considered individually significant, two alternative methods are used to calculate allowances on a portfolio basis.

- When appropriate empirical information is available, the group utilises roll rate methodology. This methodology utilises a statistical analysis of historical trends of the probability of default and amount of consequential loss, assessed for each time period during which the customer's contractual payments are overdue. The amount of loss is based on the present value of expected future cash flows, discounted at the original effective interest rate of the portfolio. Other historical data and an evaluation of current economic conditions are also considered to calculate the appropriate level of impairment allowance based on inherent loss.
- In other cases, when the portfolio size is small or when information is insufficient or not sufficiently reliable to adopt a roll rate methodology, the group adopts a formulaic approach which allocates loss rates having regard to the period of time for which a customer's loan is overdue. Loss rates are based on the discounted expected future cash flows from a portfolio.
- Roll rates, loss rates and the expected timing of future recoveries are regularly benchmarked against actual outcomes to ensure they remain appropriate.

(iii) Loan write-offs

Loans (and the related impairment allowance accounts) are normally written off, either partially or in full, when there is no realistic prospect of recovery of these amounts and, for collateralised loans, when the proceeds from the realisation of security have been received.

(iv) Reversals of impairment

If the amount of an impairment loss decreases in a subsequent period and the decrease can be related objectively to an event occurring after the impairment was recognised, the previously recognised impairment loss is reduced accordingly. The reduction of an impairment loss under these circumstances is recognised in the income statement in the period in which it occurs.

(v) Assets acquired in exchange for loans

Non-financial assets acquired in exchange for loans in order to achieve an orderly realisation are recorded as assets held for sale and reported in 'Other assets'. The asset acquired is recorded at the lower of its fair value less costs to sell and the carrying amount of the loan, net of impairment allowance amounts, at the date of exchange. No depreciation is provided in respect of assets held for sale. Any subsequent write-down of the acquired asset to fair value less costs to sell is recorded as an impairment loss and included within 'Other operating income' in the income statement. Any subsequent increase in the fair value less costs to sell, to the extent this does not exceed the cumulative impairment loss, is recognised as a gain in 'Other operating income' in the income statement. Debt securities or equities acquired in debt-to-debt/equity swaps are included in 'Financial investments' and are classified as available-for-sale.

(vi) Renegotiated loans

Loans that have been individually identified as impaired and whose terms have been subsequently renegotiated and which have been performing satisfactorily for a certain period are no longer treated as impaired.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

From 1 January 2004 to 31 December 2004

Loans were designated as non-performing as soon as management had doubts as to the ultimate collectibility of principal or interest or when contractual payments of principal or interest were 90 days overdue. When a loan was designated as non-performing, interest was suspended (see below) and a specific provision raised if required.

However, the suspension of interest could be exceptionally deferred for up to 12 months in the following situations:

- where cash collateral was held covering the total of principal and interest due and a legal right of set-off existed; or
- where the value of net realisable tangible security was considered more than sufficient to cover the full repayment of all principal and interest due and credit approval had been given to the rolling-up or capitalisation of interest payments.

There were two basic types of provision, specific and general, each of which was considered in terms of the charge and the amount outstanding.

Specific provisions

Specific provisions represented the quantification of actual and expected losses from identified accounts and were deducted from loans and advances in the balance sheet.

Other than where provisions on smaller balance homogenous loans were assessed on a portfolio basis, the amount of specific provision raised was assessed on a case by case basis. The amount of specific provision raised was the group's conservative estimate of the amount needed to reduce the carrying value of the asset to the expected ultimate net realisable value, and in reaching a decision consideration was given, among other things, to the following factors:

- the financial standing of the customer, including a realistic assessment of the likelihood of repayment of the loan within an acceptable period and the extent of the group's other commitments to the same customer;
- the realisable value of any security for the loan;
- the costs associated with obtaining repayment and realisation of the security;
- if loans were not in the local currency, the ability of the borrower to obtain the relevant foreign currency; and
- the expected timeframe over which repayment would be made.

Where specific provisions were raised on a portfolio basis, the level of provisioning took into account management's assessment of the portfolio's structure, past and expected credit losses, business and economic conditions, and any other relevant factors. The principal portfolios evaluated on this basis were credit cards and other consumer lending products.

General provisions

General provisions augmented specific provisions and provided cover for loans which were impaired at the balance sheet date but which would not be identified as such until some time in the future. The group maintained a general provision

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

which was determined by taking into account the structure and risk characteristics of the loan portfolio. Historical levels of latent risk were regularly reviewed to determine that the level of general provisioning continued to be appropriate. Where entities of the group operated in a significantly higher risk environment, an increased level of general provisioning was applied taking into account local market conditions and economic and political factors. General provisions were deducted from loans and advances to customers in the balance sheet.

Loans on which interest was being suspended

Provided that there was a realistic prospect of interest being paid at some future date, interest on non-performing loans was charged to the customer's account. However, the interest was not credited to the income statement but to an interest suspense account in the balance sheet which was netted against the relevant loan. On receipt of cash (other than from the realisation of security), suspended interest was recovered and taken to the income statement. Amounts received from the realisation of security were applied to the repayment of outstanding indebtedness, with any surplus used to release any specific provisions and then suspended interest.

Non-accrual loans

Where the probability of receiving interest payments was remote, interest was no longer accrued and any suspended interest balance was written off.

Loans were not reclassified as accruing until interest and principal payments were up-to-date and future payments were reasonably assured.

Loans and suspended interest were written off, either partially or in full, when there was no prospect of recovery of these amounts.

Assets acquired in exchange for advances in order to achieve an orderly realisation continued to be reported as advances. The asset acquired was recorded at the carrying value of the advance disposed of at the date of the exchange, and provisions were based on any subsequent deterioration in its value.

e Trading assets and trading liabilities

From 1 January 2005

Treasury bills, debt securities, structured deposits, equity shares, own debt issued and short positions in securities which have been acquired or incurred principally for the purpose of selling or repurchasing in the near term, or are part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit-taking, are classified as held-for-trading. Such financial assets or financial liabilities are recognised initially at fair value, with transaction costs taken to the income statement, and are subsequently remeasured at fair value. All subsequent gains and losses from changes in the fair value of these assets and liabilities, together with related interest income and expense and dividends, are recognised in the income statement within 'Net trading income' as they arise. Financial assets and financial liabilities are recognised using trade date accounting.

From 1 January 2004 to 31 December 2004

Treasury bills, debt securities, equity shares and short positions in securities held for dealing purposes were included in 'Cash and short-term funds', 'Trading assets' or 'Trading liabilities' in the balance sheet at market value. Changes in the clean market value of such assets and liabilities were recognised in the

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

income statement as 'Net trading income' as they arose. Related interest income and expense and dividends were recognised in 'Net interest income' and 'Dividend income' respectively.

f Financial instruments designated at fair value

From 1 January 2005

A financial instrument, other than one held for trading, is classified in this category if it meets the criteria set out below, and is so designated by management.

Financial assets and financial liabilities so designated are recognised initially at fair value, with transaction costs taken directly to the income statement, and are subsequently remeasured at fair value. This designation, once made, is irrevocable in respect of the financial instruments to which it is made. Financial assets and financial liabilities are recognised using trade date accounting.

Gains and losses from changes in the fair value of such assets and liabilities are recognised in the income statement as they arise, together with related interest income and expense and dividends, within 'Net income from financial instruments designated at fair value'.

Gains and losses arising from the changes in fair value of derivatives that are managed in conjunction with financial assets or financial liabilities designated at fair value are included in 'Net income from financial instruments designated at fair value'.

Where issued debt has been designated at fair value, and there is a related derivative, then the interest components of the debt and the derivative are recognised in 'Interest expense'.

The group may designate financial instruments at fair value where the designation:

- eliminates or significantly reduces a measurement or recognition inconsistency that would otherwise arise from measuring financial assets or financial liabilities or recognising the gains and losses on them on different bases; examples include unit-linked investment contracts, financial assets held to back certain insurance contracts, and certain portfolios of securities and debt issuances that are managed in conjunction with financial assets or liabilities measured on a fair value basis; or
- applies to a group of financial assets, financial liabilities, or both, that is managed and its performance evaluated on a fair value basis, in accordance with a documented risk management or investment strategy, and where information about that group of financial instruments is provided internally on that basis to key management personnel; examples include financial assets held to back certain insurance contracts and certain asset-backed securities; or
- relates to financial instruments containing one or more embedded derivatives that significantly modify the cash flows resulting from those financial instruments, and which would otherwise be accounted for separately; examples include certain debt issuances and debt securities held.

From 1 January 2004 to 31 December 2004

The category, 'Financial instruments designated at fair value' was introduced on 1 January 2005 in accordance with HKAS 39.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

g Financial investments

From 1 January 2005

Available-for-sale securities

Treasury bills, debt securities and equity shares intended to be held on a continuing basis are classified as available-for-sale securities unless they have been designated at fair value (see Note (f) above) or they are classified as held-to-maturity (see below). Available-for-sale securities are initially measured at fair value (which is usually the same as the consideration paid) plus direct and incremental transaction costs. They are subsequently remeasured at fair value.

Changes in fair value are recognised in equity until the securities are either sold or impaired. On the sale of available-for-sale securities, cumulative gains or losses previously recognised in equity are recognised through the income statement and classified as 'Gains less losses from financial investments'.

An assessment is made at each balance sheet date as to whether there is any objective evidence of impairment, i.e. circumstances where an adverse impact on estimated future cash flows of the financial asset or group of assets can be reliably estimated.

If an available-for-sale security is determined to be impaired, the cumulative loss (measured as the difference between the acquisition cost and the current fair value, less any impairment loss on that financial asset previously recognised in the income statement) is removed from equity and recognised in the income statement. If, in a subsequent period, the fair value of a debt instrument classified as available-for-sale increases and the increase can be objectively related to an event occurring after the impairment loss was recognised in the income statement, the impairment loss is reversed through the income statement. Impairment losses on equity instruments previously recognised in the income statement that are no longer required are reversed through reserves, not through the income statement.

Held-to-maturity investments

Held-to-maturity investments are non-derivative financial assets with fixed or determinable payments and fixed maturities that the group has the positive intention and ability to hold until maturity. Held-to-maturity investments are initially recorded at fair value plus any directly attributable transaction costs, and are subsequently measured at amortised cost using the effective interest rate method, less any impairment losses.

On 1 January 2005, the group has re-designated certain debt securities previously described as 'Long-term held-to-maturity investments' as 'available-for-sale securities' following the implementation of HKAS 39.

Financial investments are recognised using trade date accounting.

From 1 January 2004 to 31 December 2004

Treasury bills, debt securities and equity shares were accounted for in accordance with HK SSAP 24.

Treasury bills and debt securities intended to be held on a continuing basis were classified as 'Financial investments' and included in the balance sheet at cost, adjusted for amortisation of premium and discount on acquisition less provision for permanent diminution in value. Any gain or loss on realisation of these securities was recognised in the income statement as it arose and included in 'Gains less losses from financial investments'.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Equity shares intended to be held on a continuing basis were classified as 'Financial investments' and included in the balance sheet at fair value. Gains and losses arising from changes in fair value were accounted for as movements in the 'Long-term equity investment revaluation reserve'. When an investment was disposed of, the cumulative profit or loss, including any amounts previously recognised in the long-term equity investment revaluation reserve, was included in the income statement for the year in 'Gains less losses from financial investments'.

h Determination of fair value

For trading instruments, available-for-sale securities and financial instruments designated at fair value that are quoted in active markets, fair values are determined by reference to the current quoted bid/offer price. Where independent prices are not available, fair values may be determined using valuation techniques with reference to observable market data. These include comparison to similar instruments where market observable prices exist, discounted cash flow analysis, option pricing models and other valuation techniques commonly used by market participants.

The use of a valuation technique takes account of a number of factors as appropriate. These factors include adjustments for bid-offer spread, credit factors, and servicing costs of portfolios.

i Sale and repurchase agreements (including stock lending and borrowing)

Where securities are sold subject to a commitment to repurchase them at a predetermined price ('repos') they remain on the balance sheet and a liability is recorded in respect of the consideration received. Conversely, securities purchased under commitments to sell ('reverse repos') are not recognised on the balance sheet and the consideration paid is recorded in 'Cash and short term funds', 'Placings with banks maturing after one month', or 'Advances to customers' as appropriate.

The difference between the sale and repurchase price is treated as interest and recognised over the life of the agreement.

Securities lending and borrowing transactions are generally entered into on a collateralised basis, with securities or cash advanced or received as collateral. The transfer of the securities to counterparties is not normally reflected on the balance sheet. If cash collateral is advanced or received, an asset or liability is recorded at the amount of cash collateral advanced or received.

Securities borrowed are not recognised on the balance sheet, unless they are sold to third parties, in which case the obligation to return the securities is recorded as a trading liability and measured at fair value and any gains or losses are included in 'Net trading income'.

j Derivative financial instruments and hedge accounting

From 1 January 2005

Derivatives are initially recognised at fair value from the date a derivative contract is entered into and are subsequently re-measured at their fair value at each reporting date.

Fair values are obtained from quoted market prices in active markets, or by using valuation techniques, including recent market transactions, where an active market does not exist. Valuation techniques include discounted cash flow models and option pricing models as appropriate. All derivatives are classified

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

as assets when their fair value is positive, or as liabilities when their fair value is negative.

In the normal course of business, the fair value of a derivative on initial recognition is considered to be the transaction price (i.e. the fair value of the consideration given or received). However, in certain circumstances the fair value of an instrument will be evidenced by comparison with other observable current market transactions in the same instrument (i.e. without modification or repackaging) or based on a valuation technique whose variables include only data from observable markets, including interest rate yield curves, option volatilities and currency rates. When such evidence exists and results in a value which is different from the transaction price, the group recognises a trading profit or loss on inception of the derivative. If observable market data are not available, the initial change in fair value indicated by the valuation model, but based on unobservable inputs, is not recognised immediately in the income statement but is recognised over the life of the transaction on an appropriate basis, or recognised in the income statement when the inputs become observable, or when the transaction matures or is closed out.

Certain derivatives embedded in other financial instruments, such as the conversion option in a convertible bond, are treated as separate derivatives when their economic characteristics and risks are not clearly and closely related to those of the host contract, the terms of the embedded derivative are the same as those of a stand-alone derivative, and the combined contract is not designated at fair value through profit and loss. These embedded derivatives are measured at fair value with changes in fair value recognised in the income statement.

Derivative assets and liabilities on different transactions are only netted if the transactions are with the same counterparty, a legal right of set-off exists, and the cash flows are intended to be settled on a net basis.

The method of recognising the resulting fair value gains or losses depends on whether the derivative is held for trading, or is designated as a hedging instrument, and if so, the nature of the risk being hedged. All gains and losses from changes in the fair value of derivatives held for trading are recognised in the income statement. Where derivatives are designated and highly effective as hedges, the group classifies them as either: (i) hedges of the change in fair value of recognised assets or liabilities or firm commitments ('fair value hedge'); (ii) hedges of the variability in highly probable future cash flows attributable to a recognised asset or liability, or a forecast transaction ('cash flow hedge'); or (iii) hedges of net investments in a foreign operation ('net investment hedge'). Hedge accounting is applied to derivatives designated as hedging instruments in a fair value, cashflow or net investment hedge provided certain criteria are met.

Hedge accounting

It is the group's policy to document, at the inception of a hedging relationship, the relationship between the hedging instruments and hedged items, as well as its risk management objective and strategy for undertaking the hedge. Such policies also require documentation of the assessment, both at hedge inception and on an ongoing basis, of whether the derivatives that are used in hedging transactions are highly effective in offsetting changes in fair values or cash flows of hedged items attributable to the hedged risks. Interest on designated qualifying hedges is included in 'Net interest income'.

Fair value hedge

Changes in the fair value of derivatives (net of interest accrual) that are designated and qualify as fair value hedging instruments are recorded as 'Net trading income' in the income statement, together with changes in the fair value

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

of the asset or liability that are attributable to the hedged risk.

If the hedging relationship no longer meets the criteria for hedge accounting, the cumulative adjustment to the carrying amount of a hedged item for which the effective interest method is used is amortised to the income statement over the residual period to maturity in net interest income. Where the adjustment relates to the carrying amount of a hedged available-for-sale equity security, this remains in equity until the disposal of the equity security.

Cash flow hedge

The effective portion of changes in the fair value of derivatives (net of interest accrual) that are designated and qualify as cash flow hedges is recognised in shareholders' equity. Any gain or loss relating to an ineffective portion is recognised immediately in the income statement within 'Net trading income' along with accrued interest.

Amounts accumulated in shareholders' equity are recycled to the income statement in the periods in which the hedged item will affect profit or loss. However, when the forecast transaction that is hedged results in the recognition of a non-financial asset or a non-financial liability, the gains and losses previously deferred in equity are transferred from shareholders' equity and included in the initial measurement of the cost of the asset or liability.

When a hedging instrument expires or is sold, or when a hedge no longer meets the criteria for hedge accounting, any cumulative gain or loss existing in shareholders' equity at that time remains in shareholders' equity until the forecast transaction is ultimately recognised in the income statement. When a forecast transaction is no longer expected to occur, the cumulative gain or loss that was reported in shareholders' equity is immediately transferred to the income statement.

Net investment hedge

Hedges of net investments in foreign operations are accounted for similarly to cash flow hedges. Any gain or loss on the hedging instrument relating to the effective portion of the hedge is recognised in shareholders' equity; the gain or loss relating to the ineffective portion is recognised immediately in the income statement. Gains and losses accumulated in equity are included in the income statement when the foreign operation is disposed of.

Hedge effectiveness testing

To qualify for hedge accounting, HKAS 39 requires that at the inception of the hedge and throughout its life, each hedge must be expected to be highly effective (prospective effectiveness). Actual effectiveness (retrospective effectiveness) must also be demonstrated on an ongoing basis.

The documentation of each hedging relationship sets out how the effectiveness of the hedge is assessed. The method adopted for assessing hedge effectiveness will depend on the risk management strategy.

For fair value hedge relationships, the cumulative dollar offset method or regression analysis are used to test hedge effectiveness. For cash flow hedge relationships, effectiveness is tested by applying the change in variable cash flow method or the cumulative dollar offset method using the hypothetical derivative approach.

For prospective effectiveness, the hedging instrument must be expected to be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk during the period for which the hedge is designated.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

For actual effectiveness, the changes in fair value or cash flows must offset each other. The group considers that a hedge is highly effective when the offset is within the range of 80 per cent to 125 per cent.

Derivatives that do not qualify for hedge accounting

All gains and losses from changes in the fair value of any derivative instrument that does not qualify for hedge accounting under HKAS 39 are recognised immediately in the income statement and reported in 'Net trading income', except where derivative contracts are used with financial instruments designated at fair value, in which case gains and losses are reported in 'Net income from financial instruments designated at fair value'.

From 1 January 2004 to 31 December 2004

Derivative financial instruments comprised futures, forward, swap and option transactions undertaken by the group in the foreign exchange, interest rate, equity, credit derivative, and commodity markets. Netting was applied where a legal right of set-off existed.

Accounting for these instruments was dependent upon whether the transactions were undertaken for trading or non-trading purposes.

Trading transactions

Trading transactions included transactions undertaken for market-making, to service customers' needs and for proprietary purposes, as well as any related hedges.

Transactions undertaken for trading purposes were marked-to-market and the net present value of any gain or loss arising was recognised in the income statement as 'Net trading income', after appropriate deferrals for unearned credit margins and future servicing costs. Derivative trading transactions were valued by reference to an independent liquid price where this was available. For those transactions where there were no readily available quoted prices, which predominantly related to over-the-counter transactions, market values were determined by reference to independently sourced rates, using valuation models. Adjustments were made for illiquid positions where appropriate.

Assets, including gains, resulting from derivative exchange rate, interest rate, equity, credit derivative and commodity contracts which were marked-to-market were included in 'Derivatives' on the assets side of the balance sheet. Liabilities, including losses, resulting from such contracts, were included in 'Derivatives' on the liabilities side of the balance sheet.

Non-trading transactions

Non-trading transactions, which were those undertaken for hedging purposes as part of the group's risk management strategy against cash flows, assets, liabilities or positions, were measured on an accrual basis. Non-trading transactions included qualifying hedges and positions that synthetically altered the characteristics of specified financial instruments.

Non-trading transactions were accounted for on an equivalent basis to the underlying assets, liabilities or net positions. Any gain or loss was recognised on the same basis as that arising from the related assets, liabilities or positions.

To qualify as a hedge, a derivative was required effectively to reduce the price, foreign exchange or interest rate risk of the asset, liability or anticipated transaction to which it was linked and designated as a hedge at

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

inception of the derivative contract. Accordingly, changes in the market value of the derivative were required to be highly correlated with changes in the market value of the underlying hedged item at inception of the hedge and over the life of the hedge contract. If these criteria were met, the derivative was accounted for on the same basis as the underlying hedged item. Derivatives used for hedging purposes included swaps, forwards and futures. Interest rate swaps were also used to alter synthetically the interest rate characteristics of financial instruments. In order to qualify for synthetic alteration, a derivative instrument had to be linked to specific individual, or pools of similar, assets or liabilities by the notional principal and interest rate risks of the associated instruments, and had to achieve a result that was consistent with defined risk management objectives. If these criteria were met, accrual-based accounting was applied, i.e. income or expense was recognised and accrued to the next settlement date in accordance with the contractual terms of the agreement.

Any gain or loss arising on the termination of a qualifying derivative was deferred and amortised to earnings over the original life of the terminated contract. Where the underlying asset, liability or position was sold or terminated, the qualifying derivative was immediately marked-to-market and any gain or loss arising was taken to the income statement.

k Derecognition of financial assets and liabilities

Financial assets are derecognised when the rights to receive cash flows from the assets have expired; or where the group has transferred its contractual rights to receive the cash flows of the financial assets and has transferred substantially all the risks and rewards of ownership; or where both control and substantially all the risks and rewards are not retained.

Financial liabilities are derecognised when they are extinguished, i.e. when the obligation is discharged or cancelled or expires.

l Offsetting financial assets and financial liabilities

Financial assets and liabilities are offset and the net amount reported in the balance sheet when there is a legally enforceable right to offset the recognised amounts and the group intends to settle on a net basis, or realise the asset and settle the liability simultaneously. In 2004, netting was applied where a legal right of set-off existed.

m Subsidiaries and associates

Subsidiaries are companies in which the group, directly or indirectly, holds more than half of the issued share capital or controls more than half of the voting power or controls the composition of the board of directors. Subsidiaries are controlled if the group has the power to govern their financial and operating policies so as to obtain benefits from their activities. Subsidiaries are consolidated in the group's financial statements from the date on which the group obtains control until control ceases.

Balances and transactions between entities that comprise the group, together with unrealised gains and losses thereon, are eliminated in the consolidated financial statements. Minority interests represent the portion of the profit or loss and net assets of subsidiaries attributable to equity interests in those subsidiaries that are not held by the group.

Associates are entities over which the group has significant influence but not control or joint control. Investments in associates in the consolidated balance sheet are stated at the group's attributable share of the net assets of the associates using the equity method of accounting.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

'Share of profit in associates' is stated in the income statement net of tax.

n Goodwill and intangible assets

- (i) Goodwill arises on business combinations, including the acquisition of subsidiaries or associates, when the cost of acquisition exceeds the fair value of the group's share of the identifiable assets, liabilities and contingent liabilities acquired. Goodwill on acquisitions of associates is included in 'Interests in associates'. Goodwill is tested for impairment annually by comparing the present value of the expected future cash flows from a business with the carrying value of its net assets, including attributable goodwill. Goodwill is allocated to cash-generating units for the purposes of impairment testing. Goodwill is tested for impairment at the lowest level at which it is monitored for internal management purposes. Goodwill is stated at cost less accumulated impairment losses which are charged to the income statement.

Negative goodwill is recognised immediately in the income statement as it arises.

At the date of disposal of a business, attributable goodwill is included in the group's share of the net assets in the calculation of the gain or loss on disposal.

- (ii) Intangible assets include the value of in-force long-term assurance business, computer software, trade names, customer relationships and core deposit relationships. Intangible assets that have an indefinite useful life, or are not yet ready for use, are tested for impairment annually.

Intangible assets that have a finite useful life, except for the value of in-force long-term assurance business, are stated at cost less amortisation and accumulated impairment losses and are amortised over their estimated useful lives. Estimated useful life is the lower of legal duration and expected economic life.

Intangible assets are subject to impairment review if there are events or changes in circumstances that indicate that the carrying amount may not be recoverable.

The accounting policy on the value of the in-force long-term assurance business is set out in Note (v) below.

o Property, plant and equipment

- (i) Premises

Premises held for own use, comprising freehold land and buildings, and leasehold land and buildings where the value of the land cannot be reliably separated from the value of the building at inception of the lease and the premises are not clearly held under an operating lease, are stated at valuation less accumulated depreciation and impairment losses.

Such premises are revalued by professionally qualified valuers with sufficient regularity to ensure that the net carrying amount does not differ materially from the fair value. Surpluses arising on revaluation are credited firstly to the income statement to the extent of any deficits arising on revaluation previously charged to the income statement in respect of the same premises, and are thereafter taken to the 'Property revaluation reserve'. Deficits arising on revaluation are firstly set off against any previous revaluation surpluses included in the 'Property revaluation reserve' in respect of the same premises, and are thereafter taken to the income statement.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Buildings held for own use which are situated on leasehold land where it is possible to reliably separate the value of the building from the value of the leasehold land at inception of the lease are stated at valuation less accumulated depreciation and impairment losses.

Depreciation on premises is calculated to write off the assets over their estimated useful lives as follows:

- freehold land is not depreciated;
- leasehold land is depreciated over the unexpired terms of the leases; and
- buildings and improvements thereto are depreciated at the greater of 2 per cent per annum on the straight line basis or over the unexpired terms of the leases or over the remaining useful lives of the buildings.

(iii) Other plant and equipment

Equipment, fixtures and fittings (including equipment on operating leases where the group is the lessor) are stated at cost less any impairment losses. Depreciation is calculated on a straight-line basis to write off the assets over their useful lives, which are generally between five and 20 years.

(iv) Investment properties

The group holds certain properties as investments to earn rentals, or for capital appreciation, or both. Investment properties are stated at fair value with changes in fair value being recognised in the income statement (in 'Other operating income') with effect from 1 January 2005. Previously, the change in the fair value of investment properties was recognised in the property revaluation reserve. The comparative income statement for 2004 has not been adjusted to reflect the revaluation of investment properties, as permitted by HKAS 40. Fair values are determined by independent professional valuers who apply recognised valuation techniques.

Property, plant and equipment is subject to review for impairment if there are events or changes in circumstances that indicate that the carrying amount may not be recoverable.

p Finance and operating leases

- (i) Assets leased to customers under agreements which transfer substantially all the risks and rewards associated with ownership, other than legal title, are classified as finance leases. Where the group is a lessor under finance leases the amounts due under the leases, after deduction of unearned charges, are included in 'Advances to customers' as appropriate. Finance income receivable is recognised over the periods of the leases so as to give a constant rate of return on the net investment in the leases.
- (ii) Where the group is a lessee under finance leases the leased assets are capitalised and included in 'Property, plant and equipment' and the corresponding liability to the lessor is included in 'Other liabilities'. The finance lease and corresponding liability are recognised initially at the fair value of the asset or, if lower, the present value of the minimum lease payments. Finance charges payable are recognised over the periods of the leases based on the interest rates implicit in the leases so as to give a constant rate of interest on the remaining balance of the liability.
- (iii) All other leases are classified as operating leases. Where the group

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

is the lessor, the assets subject to the operating leases are included in 'Property, plant and equipment' and accounted for accordingly. Impairment losses are recognised to the extent that the carrying value of equipment is impaired through residual values not being fully recoverable. Where the group is the lessee, the leased assets are not recognised on the balance sheet. Rentals payable and receivable under operating leases are accounted for on a straight-line basis over the periods of the leases and are included in 'General and administrative expenses' and 'Other operating income' respectively.

- (iv) There are no freehold interests in land in Hong Kong. Accordingly all such land is considered to be held under operating leases. Unless it qualifies for inclusion in 'Property, plant and equipment' (as described in Note (o) above), such land is included under 'Other assets' in the balance sheet and is stated at cost less amortisation and impairment losses. Amortisation is calculated to write off the cost of the land on a straight-line basis over the terms of the leases, which are generally between 20 and 999 years.

q Income tax

- (i) Income tax for the year comprises current and deferred tax. Income tax is recognised in the income statement except to the extent that it relates to items recognised directly in reserves, in which case it is recognised in reserves.
- (ii) Current tax is the expected tax payable on the taxable income for the year, calculated using tax rates enacted or substantively enacted at the balance sheet date, and any adjustment to tax payable in respect of previous years. Current tax assets and liabilities are offset when the group intends to settle on a net basis and the legal right to set-off exists.
- (iii) Deferred tax is recognised on temporary differences between the carrying amount of assets and liabilities in the balance sheet and the amount attributed to such assets and liabilities for tax purposes. Deferred tax liabilities are generally recognised for all taxable temporary differences and deferred tax assets are recognised to the extent it is probable that future taxable profits will be available against which deductible temporary differences can be utilised.

Deferred tax is calculated using the tax rates that have been enacted or substantively enacted at the balance sheet date and are expected to apply in the periods in which the assets will be realised or the liabilities settled. Deferred tax assets and liabilities are offset when they arise in the same tax reporting group, relate to income taxes levied by the same taxation authority, and a legal right to set-off exists in the entity.

Deferred tax relating to actuarial gains and losses arising from post-employment benefit plans which are recognised directly in equity, is also credited or charged directly to equity.

From 1 January 2005, deferred tax relating to fair value re-measurement of available-for-sale investments and cash flow hedges, which are charged or credited directly to equity, is also credited or charged directly to equity and is subsequently recognised in the income statement when the deferred fair value gain or loss is recognised in the income statement.

r Pension and other post-retirement benefits

The group operates a number of pension plans which include both defined benefit and defined contribution plans.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Payments to defined contribution plans and state-managed retirement benefit plans, where the group's obligations under the plans are equivalent to a defined contribution plan, are charged as an expense as they fall due.

The costs recognised for funding defined benefit plans are determined using the projected unit credit method, with annual actuarial valuations performed on each plan. Actuarial differences that arise are recognised in shareholders' equity and presented in the statement of changes in equity in the period they arise. Past service costs are recognised immediately to the extent the benefits are vested, and are otherwise recognised on a straight-line basis over the average period until the benefits are vested. The current service costs and any past service costs together with the expected return on plan assets less the unwinding of the discount on the plan liabilities are charged to operating expenses.

The net defined benefit asset recognised in the balance sheet represents the excess of the fair value of plan assets over the present value of the defined benefit obligations adjusted for unrecognised past service costs. The asset is limited to unrecognised past service costs plus the present value of available refunds and reductions in future contributions to the plan.

The group implemented HK SSAP 34 (which is materially equivalent to HKAS 19) in relation to the accounting for pensions in 2003, and adopted the corridor approach for the recognition of actuarial gains and losses. The group has changed its policy in 2005 to recognise in full actuarial gains and losses in the statement of changes in equity.

s Share based payments

The group grants shares of HSBC Holdings plc to certain employees under various vesting conditions and the group has the obligation to acquire HSBC Holdings plc shares to deliver to the employees upon vesting. The group's liability under such arrangements is measured at fair value at each reporting date. The changes in fair value are recognised as an expense in each period. The main kinds of awards in this category are as follows:

- shares awarded to an employee to join HSBC that are made available immediately, with no vesting period attached to the award, are expensed immediately;
- when an inducement in the form of shares is awarded to an employee on commencement of employment with HSBC, and the employee must complete a specified period of service before the inducement vests, the expense is spread over the period to vesting;
- discretionary bonuses awarded in respect of service in the past, are expensed over the vesting period which, in this case, is the period from the date the bonus is announced until the award vests.

For share options granted to employees of the group directly by HSBC Holdings plc, the compensation expense to be spread over the vesting period is determined by reference to the fair value of the options on grant date, and the impact of any non-market vesting conditions such as option lapses. The expense is recognised over the vesting period. The corresponding amount is credited to 'Other reserves'.

t Foreign currencies

- (i) Items included in each of the group's entities are measured using the currency of the primary economic environment in which the entity operates ('the functional currency'). The group's financial statements

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

are presented in Hong Kong dollars.

Transactions in foreign currencies are recorded in the functional currency at the rate of exchange prevailing on the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency at the rate of exchange ruling at the balance sheet date. Any resulting exchange differences are included in the income statement. Non-monetary assets and liabilities that are measured in terms of historical cost in a foreign currency are translated into the functional currency using the rate of exchange at the date of the initial transaction. Non-monetary assets and liabilities measured at fair value in a foreign currency are translated into the functional currency using the rate of exchange at the date the fair value was determined.

- (ii) The results of branches, subsidiaries and associates not reporting in Hong Kong dollars are translated into Hong Kong dollars at the average rates of exchange for the reporting period. Exchange differences arising from the retranslation of opening foreign currency net investments and exchange differences arising from retranslation of the result for the reporting period from the average rate to the exchange rate prevailing at the period-end are accounted for in a separate foreign exchange reserve. Exchange differences on a monetary item that is part of a net investment in a foreign operation are recognised in the income statement of the separate subsidiary financial statements. In the consolidated financial statements these exchange differences are recognised in the foreign exchange reserve in shareholders' equity. On disposal of a foreign operation, exchange differences relating thereto and previously recognised in reserves are recognised in the income statement.

u Provisions

Provisions for liabilities and charges are recognised when it is probable that an outflow of economic benefits will be required to settle a present legal or constructive obligation arising from past events and a reliable estimate can be made of the amount of the obligation.

v Insurance contracts

From 1 January 2005

Through its insurance subsidiaries, the group issues contracts to customers that contain insurance risk, financial risk, or a combination thereof. A contract under which the group accepts significant insurance risk from another party, by agreeing to compensate that party on the occurrence of a specified uncertain future event, is classified as an insurance contract. An insurance contract may also transfer financial risk, but is accounted for as an insurance contract if the insurance risk is significant.

Insurance contracts are accounted for as follows:

Premiums

Gross insurance premiums for general insurance business are reported as income over the term of the insurance contract attributable to the risks borne during the accounting period. The unearned premium or the proportion of the business underwritten in the accounting year relating to the period of risk after the balance sheet date is calculated on a daily or monthly pro-rata basis.

Premiums for life assurance are accounted for when receivable, except in unit-linked business where premiums are accounted for when liabilities are established.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Reinsurance premiums are accounted for in the same accounting period as the premiums for the direct insurance to which they relate.

Claims and reinsurance recoveries

Gross insurance claims for general insurance business include paid claims and movements in outstanding claims reserves. The outstanding claims reserves are based on the estimated ultimate cost of all claims that have occurred but not settled at the balance sheet date, whether reported or not, together with related claim handling costs and a reduction for the expected value of salvage and other recoveries. Reserves for claims incurred but not reported ('IBNR') are made on an estimated basis, using appropriate statistical techniques.

Gross insurance claims for life assurance reflect the total cost of claims arising during the year, including claim handling costs and any policyholder bonuses allocated in anticipation of a bonus declaration. The technical reserves for non-linked liabilities (long-term business provision) are calculated by each life assurance operation based on local actuarial principles. The technical reserves for linked liabilities are at least the element of any surrender or transfer value which is calculated by reference to the relevant fund or funds or index. Some insurance contracts may contain discretionary participation features whereby the policyholder is entitled to additional payments whose amount and/or timing is at the discretion of the issuer. The discretionary element of these contracts is included in 'Liabilities under insurance contracts issued'.

Reinsurance recoveries are accounted for in the same period as the related claim.

Value of long-term assurance business

A value is placed on insurance contracts that are classified as long-term assurance business, and are in force at the balance sheet date.

The value of in-force long-term assurance business is determined by discounting future earnings expected to emerge from business currently in force, using appropriate assumptions in assessing factors such as recent experience and general economic conditions. Movements in the value of in-force long-term assurance business are included in 'Other operating income' on a gross of tax basis.

w Investment contracts

Customer liabilities under unit-linked investment contracts and the linked financial assets are designated at fair value, and the movements in fair value are recognised in the income statement in 'Net income from financial instruments designated at fair value'.

Premiums receivable and amounts withdrawn are accounted for as increases or decreases in the liability recorded in respect of investment contracts.

Investment management fees receivable are recognised in the income statement over the period of the provision of the investment management services.

The incremental costs directly related to the acquisition of new investment contracts or renewal of existing investment contracts are capitalised and amortised over the period of the provision of the investment management services.

x Dividends

Dividends proposed or declared after the balance sheet date are disclosed as a separate component of shareholders' equity.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

y Debt securities in issue and subordinated liabilities

From 1 January 2005

Debt securities issued for trading purposes or designated at fair value are reported under the appropriate balance sheet captions. Other debt securities in issue and subordinated liabilities are measured at amortised cost using the effective interest rate method and are reported under 'Debt securities in issue' or 'Subordinated liabilities'.

From 1 January 2004 to 31 December 2004

Debt securities in issue were measured at cost adjusted for amortised premiums and discounts, and were reported under 'Debt securities in issue' or 'Subordinated liabilities'.

z Cash and cash equivalents

For the purpose of the cash flow statement, cash and cash equivalents include highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of change in value. Such investments comprise cash and balances with banks maturing within one month, and treasury bills and certificates of deposit with less than three months' maturity from the date of acquisition.

aa Share capital

From 1 January 2005

Shares are classified as equity when the group has the unconditional right to avoid transferring cash or other financial assets.

From 1 January 2004 to 31 December 2004

Share capital included preference shares issued by the group. These have been reclassified as liabilities upon the adoption of HKAS 32.

2. Effect of changes in accounting policies

A description of the significant changes from accounting policies previously applied by the group together with estimates, to the extent practicable, of the amounts involved are set out below.

Changes in accounting policies have generally been applied retrospectively, except as noted below. Retrospective application of a new accounting policy involves restating the comparative figures and restating the opening balance sheet as at 1 January 2004 as if the new policy had always been applied.

Some standards specify transitional provisions governing the initial application of the standard. In some cases transitional provisions restrict the extent to which a change in accounting policy may be applied retrospectively. The most significant exception to retrospective application is HKAS 39.

a HKAS 32 - Financial instruments: disclosure and presentation

Application of HKAS 32 has resulted in the reclassification of preference shares issued by the group from share capital to liabilities. This has had the effect of increasing liabilities and reducing equity at 31 December 2005 by HK\$71,980 million (2004: HK\$55,602 million). In addition, dividends payable on those preference shares have been reclassified as interest expense whereas they were previously dealt with

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

as an appropriation of retained earnings. This has reduced net interest income and operating profit in 2005 by approximately HK\$3,010 million (2004: HK\$1,540 million).

HKAS 32 also requires that financial assets and liabilities may only be offset in the circumstances described in section 1 - Accounting policies Note (l). This resulted in a grossing up of assets and liabilities by approximately HK\$57,718 million at 31 December 2005 (2004: HK\$52,157 million). This adjustment had no effect on reported profit or equity.

b HKAS 39 - Financial instruments: recognition and measurement

HKAS 39 sets requirements for the classification, recognition, measurement and derecognition of financial instruments as well as hedge accounting. These requirements affect the measurement and timing of income and expense associated with many of the activities of the group as well as the carrying values of financial assets and liabilities in the balance sheet.

The new accounting policies resulting from the application of HKAS 39 are set out in section 1 above. Where the accounting policies have changed as a result of the application of HKAS 39, the previous policies have also been disclosed.

The transitional provisions of HKAS 39 prohibit full retrospective application of the standard and instead require the adjustments to the carrying values of all financial instruments on initial application of the standard to be made in the opening balance sheet at 1 January 2005. This means that the recognition and measurement of certain financial instruments, together with associated income and expense, for 2005 is not necessarily consistent with the amounts reported for 2004.

The more significant changes in the 2005 financial statements resulting from HKAS 39 include (but are not limited to) the following:

- Effective interest rate method (section 1 - Accounting policies Notes (a)&(b))

HKAS 39 requires the use of the effective interest rate method for calculating interest income and the amount of amortisation of premiums, discounts and transaction costs associated with debt instruments. This affects the timing of recognition of certain types of fee income and expense as well as their reclassification to 'Net interest income'.

- Derivatives and hedging (section 1 - Accounting policies Note (j))

HKAS 39 requires all derivatives to be recognised on the balance sheet at fair (market) value regardless of the purpose for which they are held. In addition, the rules for applying hedge accounting under HKAS 39 are more restrictive than the policies previously applied by the group. This results in fewer transactions qualifying for hedge accounting in 2005 compared to previously, while the gains and losses on the derivatives are now generally recognised in 'Net trading income'.

- Acceptances and endorsements

HKAS 39 requires that assets and liabilities associated with acceptances and endorsements related to trade finance should be recognised on the balance sheet. This results in an increase in both 'Other assets' and 'Other liabilities' of HK\$22,744 million. Under the previous accounting policy, these items had been disclosed as off-balance sheet contingent

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

liabilities and commitments. This change has no effect on profit for the year.

- Fair value measurement

HKAS 39 generally requires treasury bills and debt securities intended to be held on a continuing basis to be carried at fair value in the balance sheet. Unless the securities are designated under the 'fair value option' (see below), then the changes in fair value are recognised in equity until the securities are sold. These securities were previously carried at cost.

In addition, the group has early-adopted the 'Amendment to HKAS 39 - The fair value option' in 2005. This allows financial assets and liabilities, under certain restricted circumstances, to be designated at fair value with changes in fair value being recognised in the income statement as they arise. This is described in section 1 - Accounting policies Note (f). There was no such category in 2004.

Upon initial application of HKAS 39 in 2005, the following financial assets and liabilities were designated at fair value under the 'fair value option':

Fair value at 01Jan05	HK\$m
Assets	
Customer advances	3,807
Treasury bills	1,318
Debt securities	15,976
Equity shares	14,971
	36,072
Liabilities	
Customer deposits	1,252
Deposits by banks	1
	1,253

Effect of HKAS 39 on the income statement

To the extent practicable, management has estimated the effect of applying HKAS 39 on the group's income statement in 2005 as follows:

Estimated effect of applying HKAS 39:	HK\$m
Increase in net interest income	1,076
Decrease in net fee income	(298)
Decrease in net trading income	(957)
Net income from financial instruments designated at fair value	372
Increase in gains less losses from financial investments	139
Decrease in dividend income	(105)
Increase in impairment charges and other credit risk provisions	(53)
Increase in net operating income	174
Decrease in operating expenses	193
Increase in profit before tax	367

c HKFRS 4 - Insurance contracts

HKFRS 4 introduced a formal definition of the term 'Insurance contract'.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

Application of this standard has materially affected the financial statements in the manner set out below.

- Certain contracts issued by the group which have the legal form of insurance contracts do not meet the definition of insurance contracts in HKFRS 4. The assets, liabilities, income and expense associated with such contracts are dealt with as investment contracts and from 1 January 2005, are accounted for under HKAS 39.
- Reclassification of items relating to the insurance business
 - Financial assets held by insurance subsidiaries were previously reported as 'Other assets'. These financial assets have been disaggregated and classified into their respective categories. Measurement of such assets is also in accordance with HKAS 39 with effect from 1 January 2005.
 - The income statement captions 'Net earned insurance premiums' and 'Net insurance claims incurred and movement in policyholders' liabilities' now include only the amounts relating to insurance contracts as defined under HKFRS 4. Income and expense relating to contracts which are, in substance, investment contracts are included in other income statement captions according to their nature. Income from related assets is included in 'Net interest income' and 'Net income from financial instruments designated at fair value'. The related assets are included in the balance sheet under 'Financial assets designated at fair value' and 'Financial investments'. The liabilities related to these contracts are included in 'Financial liabilities designated at fair value'.
 - Previously all income and expense related to the insurance business was included in 'Other operating income'. The comparative figures disclosed in the financial statements have been reclassified to show net earned insurance premiums and net insurance claims incurred. However, in accordance with the transitional provisions of HKAS 39, the comparative figures have not been remeasured. These reclassifications have no impact on operating profit.

d HKFRS 2 - Share-based payment

HKFRS 2 requires an expense to be recognised by the group where employees are awarded options over shares in HSBC Holdings plc and where the group awards shares to employees in compensation for services rendered to the group. The group recognises an expense in all cases where equity instruments of HSBC Holdings plc are granted to employees for services rendered to the group, regardless of whether the equity instruments are granted directly by HSBC Holdings plc or by the group. The expense is recognised over the vesting period relevant to each type of award. Details of the new accounting policy are set out in section 1 - Accounting policies Note (s).

Prior to the adoption of HKFRS 2, share options that were awarded by HSBC Holdings plc directly to employees of the group were not recognised in the group's financial statements. When the group awarded its employees shares of HSBC Holdings plc the amount payable by the group to acquire the shares was recorded as an expense.

In accordance with the transitional rules of HKFRS 2, the group has applied the new accounting policy retrospectively to all share-based payment transactions where the grant date was after 7 November 2002 and which had not vested by 31 December 2004.

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

The change in accounting policy has resulted in share-based payment expenses being recognised in 2005 of HK\$876 million (2004: HK\$466 million). At 31 December 2005 the reserve arising from the grant of share options to the group's employees was HK\$629 million (2004: HK\$322 million) and the liability recognised for share awards made by the group was HK\$576 million (2004: HK\$211 million).

e HKAS 17 - Leases

HKAS 17 requires leasehold land to be classified as held under operating leases. With some exceptions, as described in section 1 - Accounting policies Note (o), this has resulted in the remeasurement of certain interests in land (principally held in Hong Kong) from a fair value basis to a historical cost basis. Such interests in land have been removed from 'Property, plant & equipment' and reclassified as 'Other assets'. This has resulted in a decrease in assets and a decrease in previously reported revaluation reserves.

If the previous accounting policy had been applied in 2005, total assets and equity would have been increased by approximately HK\$15,061 million and HK\$12,425 million respectively at 31 December 2005 (2004: HK\$10,746 million and HK\$9,352 million respectively). The deferred tax liability would have been increased by HK\$2,636 million (2004: HK\$1,394 million). In addition, operating profit in 2005 would have been reduced by the additional depreciation charge attributable to the revaluation of approximately HK\$420 million (2004: HK\$245 million).

In the group's interim news release for the six months ended 30 June 2005, leases of land exceeding 500 years to expiry at inception were recognised as finance leases and were included in the balance sheet as 'Property, plant & equipment' at fair value less accumulated depreciation. Following the publication of a summary of a meeting of the International Financial Reporting Interpretations Committee in December 2005, at which a related issue had been discussed, the group considered it would be appropriate to classify all leases of land as operating leases, regardless of the length of the lease, unless the specific conditions described in section 1 - Accounting policies Note (o) are met.

f HKAS 40 - Investment properties (section 1 - Accounting policies Note (o)(iii))

HKAS 40 requires unrealised revaluation gains and losses on investment properties to be recognised directly in the income statement as they arise. Prior to the implementation of this standard, revaluation gains on investment properties were recognised in equity until the investment properties were sold, at which point the cumulative revaluation gains or losses would be included in the calculation of the gain or loss on disposal. The new policy increases operating profit for 2005 by HK\$1,167 million.

In accordance with the transitional provisions of HKAS 40, the 2004 income statement has not been restated to conform to the new accounting policy.

g HKFRS 3 - Business combinations

HKFRS 3 has been applied with effect from 1 January 2004, in accordance with the transitional provisions of the standard. The principal effect of this is that previously recognised goodwill has been frozen at its carrying value (cost less accumulated amortisation and impairment) as at 1 January 2004. Thereafter, goodwill is not amortised, but is

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

tested annually for impairment. Prior to this change of accounting policy, goodwill was amortised over its estimated useful life.

HKFRS 3 also requires intangible assets to be recognised upon acquisition of a subsidiary or an associate. As a result of this, intangible assets have been reclassified from goodwill.

No impairment losses have been recognised as a result of applying the new policy for 2004 and 2005. The comparative figures for 2004 have been restated to comply with the new policy.

The cessation of goodwill amortisation has resulted in an increase in profit before tax for 2005 of HK\$145 million (2004: HK\$43 million). The carrying amount of goodwill in the balance sheet has therefore not been reduced by the same amount.

The net effect of ceasing the amortisation of goodwill and the additional amortisation charged on intangible assets leads to a decrease in profit before tax of HK\$44 million in 2005. For 2004, the net effect was an increase in profit before tax of HK\$43 million.

h HKAS 38 - Intangible assets

The application of HKAS 38 has resulted in the recognition of internally developed software as an asset in 2005 of approximately HK\$628 million. Under the group's previous accounting policy, software development costs were recognised as expenses as they were incurred.

The effect of the new policy is to increase operating profit for 2005 by approximately HK\$590 million, representing the capitalised internally developed software, less amortisation for the year.

3. Critical accounting estimates and judgements in applying accounting policies

The preparation of financial statements requires the group to make certain estimates and to form judgments about the application of its accounting policies. The most significant areas where estimates and judgments have been made are set out below.

Fair value estimation

As disclosed in section 1 - Accounting policies, a significant proportion of the group's financial assets and liabilities are stated in the balance sheet at fair value. Fair value is defined as the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction.

Where there is an active market for financial assets and liabilities and quoted prices are available, then such prices are the best indicator of fair value. In the normal course of business, however, the group also holds financial assets and liabilities, including certain non-exchange traded derivatives, where quoted prices in an active market are not available. The group uses valuation techniques to determine the fair value of such financial instruments. The valuation techniques used for different financial instruments are selected to reflect how the market would be expected to price the instruments, using inputs that reasonably reflect the risk-return factors inherent in the instruments. Depending upon the characteristics of the financial instruments concerned, observable market factors are available for use in most valuations, while others involve a greater degree of judgment and estimation.

In the case of trading assets and liabilities, derivatives, and financial assets and liabilities designated at fair value, the estimation of fair value at the

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

reporting date affects profit for the year. The group has, and maintains, a substantial pool of expertise in the valuation of financial instruments and valuation estimates are benchmarked against actual outcomes, where practicable, to ensure that the valuation techniques reflect actual market activity.

Accounting standards also require disclosure of the estimated fair value of certain financial instruments that are stated in the balance sheet at amortised cost. These disclosures, which are made in the notes on the financial statements, affect neither the profit for the year nor the carrying amounts of any assets or liabilities in the balance sheet. The estimation of fair value of some of these classes of assets and liabilities is performed in the absence of active markets for instruments with similar characteristics. The amounts disclosed, therefore, may involve a higher degree of judgment and estimation than is the case for most of the assets and liabilities which are carried at fair value on the balance sheet.

Loan impairment

Application of the group's methodology for assessing loan impairment, as set out in section 1 - Accounting policies Note (d), involves considerable judgment and estimation.

For individually significant loans, judgment is required in determining first, whether there are indications that an impairment loss may have already been incurred, and then estimating the amount and timing of expected cash flows, which form the basis of the impairment loss that is recorded.

For collectively assessed loans, judgment is involved in selecting and applying the criteria for grouping together loans with similar credit characteristics, as well as in selecting and applying the statistical and other models used to estimate the losses incurred for each group of loans in the reporting period. The benchmarking of loss rates and the ongoing refinement of modelling methodologies provide a means of identifying changes that may be required, but the process is inherently one of estimation.

Special purpose entities

In the normal course of business, the group participates, in a variety of ways, in financial structures involving special purpose entities. Judgment is required in determining whether the rights and obligations taken on result in the group having control of the special purpose entity and whether it should be included in the consolidated financial statements as a subsidiary.

Impairment of available-for-sale financial investments

Judgment is required in determining whether or not a decline in fair value of an available-for-sale financial investment below its original cost is of such a nature as to constitute impairment, and thus whether an impairment loss needs to be recognised under HKAS 39.

Liabilities under investment contracts

Estimating the liabilities for long-term investment contracts where the group has guaranteed a minimum return involves the use of statistical techniques. The selection of these techniques and the assumptions used about future interest rates and rates of return on equity, as well as behavioural and other future events, have a significant impact on the amount recognised as a liability.

Insurance contracts

Classification

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

HKFRS 4 and HKAS 39 require the group to determine whether an insurance contract that transfers both insurance risk and financial risk is classified as an insurance contract under HKFRS 4, or as a financial instrument, or whether the insurance and non-insurance elements of the contract should be accounted for separately. This process involves judgment and estimation of the amounts of different types of risks that are transferred or assumed under a contract. The estimation of such risks often involves the use of assumptions about future events and is thus subject to a degree of uncertainty.

Present value of in-force long-term assurance business ('PVIF')

The value of PVIF, which is recorded as an intangible asset, depends upon assumptions regarding future events. The assumptions are reassessed at each reporting date and changes in the estimates which affect the value of PVIF are reflected in the income statement.

Insurance liabilities

The estimation of insurance claims liabilities involves selecting statistical models and making assumptions about future events which need to be frequently calibrated against experience and forecasts.

Income taxes

The group is subject to income taxes in many jurisdictions and significant judgment is required in estimating the group's provision for income taxes. There are many transactions and interpretations of tax law for which the final outcome will not be established until some time later. The group recognises liabilities for taxation based on estimates of whether additional taxes will be payable. The estimation process includes seeking expert advice where appropriate. Where the final liability for taxation is different from the amounts that were initially recorded, these differences will affect the income tax and deferred tax provisions in the period in which the estimate is revised or the final liability is established.

Held to maturity securities

As indicated in section 1 - Accounting policies Note (g), certain debt instruments within the 'Financial investments' category are classified as held-to-maturity investments. In order to be able to use this classification, the group needs to exercise judgment upon initial recognition of the investments as to whether it has the positive intention and ability to hold them until maturity. A failure to hold these investments to maturity, in all but a limited number of circumstances, would result in the entire held-to-maturity category being reclassified as 'available-for-sale'. They would then be measured at fair value.
