The actuarial reserving method employed under the PRC GAAP makes an implicit allowance for first year expenses in excess of policy loadings. Under HKFRS, The costs of acquiring new and renewal business which vary with and are primarily related to the production of new and renewal business are deferred. DAC for long-term traditional insurance contracts are amortized over the premium paying period as a constant percentage of expected premiums. DAC for long-term investment type insurance contracts and investment contracts are amortized over the expected life of the contracts as a constant percentage of the present value of estimated gross profits expected to be realized over the life of the contracts.

(ii) Premiums, benefits and reserves of insurance and investment contracts

Under the PRC GAAP, the long-term products comprise life insurance and long-term health insurance, whose premiums received and benefits paid are recognized in current period's income statement. Under HKFRS, the long-term products are classified into 4 categories: long-term traditional insurance contracts, long-term investment type insurance contracts, investment contracts with DPF and investment contracts without DPF. For the last three categories, premiums and interests earned are accounted as deposits to the related policy accounts while benefits as well as policy fees, mortality and surrender charges are accounted as withdrawals from the related policy accounts. The reconciling item also includes an amount resulting from differences in actuarial reserving methodologies. Under the PRC GAAP, unearned premium reserve is provided for the future insurance obligations from insurance business with policy terms of no more than one year. In accordance with HKFRS 4 Insurance Contract, premiums from short-duration contracts ordinarily shall be recognized as revenue over the period of the contract in proportion to the amount of insurance protection provided.

(iii) Impact on associates incurred from difference in accounting standards

The difference between PRC GAAP and HKFRS exists in the Company's associate, China Life Property and Casualty Insurance Company Limited. The impact on the profit and shareholders' equity of China Life Property and Casualty Insurance Company Limited from above difference influences the Group through equity method.

(iv) Reversal of property, plant and equipment revaluation surplus and its related depreciation

Under Hong Kong Accounting Standard 16 Property, Plant and Equipment, the Company has chosen the cost model as its accounting policy and does not recognize any revaluation relating to property, plant and equipment. The revaluation surplus and its related depreciation under the PRC GAAP are reversed under HKFRS.
