

TRONOX INC  
Form 425  
May 24, 2012

Investor Presentation  
May 24, 2012  
Filed by Tronox Incorporated  
Pursuant to Rule 425 of the Securities Act of 1933, as amended  
Subject Company: Tronox Incorporated (File No: 001-32669)

#### Forward-Looking Statements

This document contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995.

statements

are

typically

identified

by

words

or

phrases

such

as

may,

will,

anticipate,

estimate,

expect,

project,

intend,

plan,

believe,

target,

forecast,

and

other

words

and

terms

of

similar

meaning.

Forward-looking

statements

involve

estimates,

expectations,

projections,

goals,

forecasts, assumptions, risks and uncertainties. Tronox Incorporated and Tronox Limited caution readers that any forward-looking

guarantee of future performance and that actual results could differ materially from those contained in the forward-looking statements.

Forward-looking statements include, but are not limited to, statements about the benefits of the proposed transaction involving Tronox Incorporated and Tronox Limited.

Forward-looking statements include, but are not limited to, statements about the benefits of the proposed transaction involving Tronox Incorporated and Tronox Limited and Exxaro Resources Limited ( "Exxaro" ), including future financial and operating results, Tronox Incorporated's, Tronox Limited's, and Exxaro Resources Limited's

plans, objectives, expectations and intentions, the expected timing of completion of the transaction, and other statements that are forward-looking.

Important factors that could cause actual results to differ materially from those indicated by such forward-looking statements include, among other things, the following uncertainties relating to: the ability to obtain the requisite Tronox Incorporated shareholder approvals; the risk that Tronox Incorporated and Exxaro may be unable to obtain governmental and regulatory approvals required for the transaction, or required governmental and regulatory approvals may delay the transaction or result in the imposition of conditions that could cause the parties to abandon the transaction; the ability of Tronox and Exxaro to successfully integrate their Mineral Sands business; the risk that a condition to the closing of the transaction may not be satisfied; the ability of the combined company to obtain necessary financing to refinance existing indebtedness or modifying existing financing arrangements, and financing for the business post-closing and the terms on which such financing or modification may be available; the timing to consummate the transaction; the risk that the businesses will not be integrated successfully; the risk that Tronox Limited will not be able to complete registration with the SEC and/or the listing requirements thereof on a national securities exchange, and the timing of such listing; therefore, the risks to

shareholders  
associated  
with  
becoming  
shareholders  
of

an Australian-domiciled holding company; the risk that the expected cost savings and any other synergies from the transaction

realized  
or

may  
take  
longer

to  
realize  
than

expected;  
disruption  
from

the  
transaction  
making

it  
more  
difficult

to  
maintain  
relationships

with  
customers,

employees or suppliers; the diversion of management time on transaction-related issues; the market value of Tronox Incorporated

for consumer products for which Tronox Incorporated's businesses supply raw materials; the financial resources of competitors  
and/or

equity  
financing;  
the  
ability

to  
achieve  
favorable

tax  
structuring  
for

the  
benefit  
of

Tronox  
Limited  
and

its  
subsidiaries

and  
shareholders;  
the  
ability  
to  
respond  
to  
challenges  
in  
international  
markets;  
changes  
in  
currency  
exchange  
rates;  
political  
or  
economic  
conditions  
in  
areas  
where  
Tronox  
Limited

and its subsidiaries will operate; the risk of changes in laws and regulations applicable to the business and assets of Tronox Limited and its subsidiaries

will  
operate;  
trade  
and  
regulatory  
matters;  
general  
economic  
conditions;  
and  
other  
factors  
and  
risks  
identified  
in  
the  
Risk  
Factors  
Section

of Tronox Incorporated's Registration Statement on form S-4, as amended, filed with the U.S. Securities and Exchange Commission on July 11, 2012. Each forward-looking statement speaks only as of the date of the particular statement and neither Tronox Incorporated nor its subsidiaries undertakes any obligation to update or revise its forward-looking statements, whether as a result of new information, future events or otherwise.

Additional Information and Where to Find it.

This document does not constitute an offer to sell or the solicitation of an offer to buy any securities, or a solicitation of any vote or approval, nor shall there be any sale of securities in any jurisdiction in which such offer, solicitation or sale would be unlawful without registration or qualification under the securities laws of any such jurisdiction. In connection with the proposed transaction involving Tronox Incorporated, Tronox Limited and Exxaro, Tronox Limited and Tronox Incorporated have filed with the SEC a Registration Statement on Form S-4 that includes a definitive proxy statement of Tronox Incorporated that also constitutes a prospectus of Tronox Limited. The registration statement relating to the securities to be offered was declared effective by the Securities and Exchange Commission on May 4, 2012. Tronox Incorporated commenced the mailing of the the proxy statement/prospectus to its stockholders on or about May 7, 2012. Tronox Incorporated urges investors and stockholders to read the proxy statement/prospectus (including amendments or supplements thereto) regarding the proposed transaction, as well as other documents filed with the SEC, because they contain important information. You may obtain copies of all documents filed with the SEC regarding this transaction, free of charge, at the SEC's website ([www.sec.gov](http://www.sec.gov)). You may also obtain these documents, free of charge, from Tronox Incorporated's website ([www.tronox.com](http://www.tronox.com)) under the heading Investor Relations.

Non-GAAP Financial Measures

EBITDA and Adjusted EBITDA, which are used by management to measure performance, are non-GAAP financial measures. Management believes that EBITDA and Adjusted EBITDA are useful to investors, as EBITDA is commonly used in the industry to measure means

of  
evaluating  
operating  
performance  
and  
Adjusted  
EBITDA  
is  
used  
in  
our  
debt  
instruments  
to  
determine  
compliance  
with

financial covenants. Both EBITDA and Adjusted EBITDA are included as a supplemental measure of our operating performance because they eliminate items that have less bearing

on  
operating  
performance  
and  
highlight  
trends  
in  
the  
core  
business  
that  
may  
not

otherwise be apparent when relying solely on GAAP financial measures. In addition, Adjusted EBITDA is one of the primary management uses for planning and budgeting processes and to monitor and evaluate financial and operating results. EBITDA and Adjusted EBITDA are not recognized terms under GAAP and do not purport to be an alternative to measures of our financial performance as determined in accordance with GAAP, such as net income (loss). Because other companies may calculate EBITDA and Adjusted EBITDA differently than we do, EBITDA may not be, and Adjusted EBITDA as presented herein is not, comparable to similarly titled measures reported by other companies.

A  
reconciliation  
of  
EBITDA  
and  
Adjusted  
EBITDA  
to  
net  
income  
are  
included  
at

the end of this presentation

Additional Information & Non-GAAP  
Financial Measures

## Tronox Mineral Sands Operations

### Overview

Tronox Mineral Sands comprises three mining operations: KZN Sands and Namakwa Sands located in South Africa and Tiwest located in Australia

Mineral Sands operations consist of two key product streams

### Titanium Feedstock and Zircon

3rd largest titanium ore feedstock producer globally in 2011 (10% market share) with 3

producing assets

2nd largest zircon producer globally in 2011 (20%  
market share)

Mineral Sands operations also produces high purity Pig  
Iron as a co product

Geographically well positioned to serve markets in Asia,  
the Middle East, Europe, North and South America

Existing inventory will be enough to supply slag furnaces  
until the Fairbreeze mine is online

2

Tronox Mining Operations  
KZN Sands operations are located on the  
East Coast of South Africa  
KZN Sands operations comprise four  
phases:  
Mining  
Mineral Separation

Smelting

Bulk Terminal

Hillendale mine of KZN Sands is expected to end production in 2012

Fairbreeze mine of KZN Sands is expected to begin production in 2014

KZN Sands

Tiwest

17

Namakwa Sands

Heavy mineral resources mine in Namakwa are on the coastal plain along the west coast of South Africa

Namakwa Sands operations comprise three phases:

Dry Mining

Mineral Separation

Smelting

Produces titanium feedstocks including ilmenite, chloride slag, titanium slag, rutile, as well as co products pig iron and zircon

Tiwest operations are located in Western Australia

Tiwest operates:

Mining-

dredging, dry mining techniques

Chandala processing plant

Dry mills, synthetic rutile plant

Bunbury plant operations

Unique mine to mine

concept: self-

contained from extraction through waste disposal

Large geographical span, good springboard into Asia Pacific

Produces titanium feedstocks including ilmenite, rutile, synthetic rutile, leucoxene, zircon, activated carbon and staurolite

3.0 million tonne excess ilmenite stockpile at Namakwa Sands expected to be source of alternate supply prior to Fairbreeze expansion coming on-line

III. Industry Perspectives

20  
Industry Capacity Utilization  
1  
During  
the  
last  
cycle,  
over  
380,000  
MT  
of

capacity  
was  
taken  
out  
of  
market,  
which  
management  
estimates  
to  
be

approximately a 7% reduction

Bringing new capacity online requires significant capex, long lead time and requires difficult to achieve permitting (in particular environmental regulations): as a result a new Chloride facility has not been built since 1994

1.

#### Mineral Sands Market

Mineral Sands industry encompasses producers of titanium raw material including ilmenite, titanium slag, rutile, synthetic rutile, and leucoxene

Zircon is a key co-product of titanium raw material

Industry has benefited from favorable supply / demand characteristics for both high-grade titanium feedstocks & zircon over the last two years

Titanium Feedstock-

Key Producers

Zircon-

Key Producers

Note: Rio Tinto has a 37% interest in Richards Bay Minerals

22

Constrained Feedstock Environment is  
Expected to Persist  
Fundamentals for titanium feedstocks remain strong,  
despite recent softening in China  
Developing countries  
intensity of pigment use  
is expected to grow with rising living standards  
(GDP/capita)  
2  
Supply deficits remain structural for most feedstock  
products, particularly for high quality chloride  
feedstocks

Lack of meaningful investments in titanium minerals mining industry in the past decade  
No new substantive supply expected to enter the market in the near term  
High risk and long lead time (typically 5-7 years) in starting new projects  
China remains primarily import dependent for its titanium ore requirements  
Ore suppliers have succeeded in recent years in moving prices higher and changing prices quickly  
Ore prices are expected to increase for pigment producers, despite short-term demand softening

Overview

Zircon Market Overview

Zircon is a mineral often produced as a co-product of TiO

2

minerals primarily in Australia and South Africa

Global Zircon demand continues to stay significantly higher than supply

Expected strong long-term demand driven by urbanization, especially in developing economies such as China

Inventories throughout the supply chain at historically low levels

Zircon market fundamentals expected to stay

positive over the long-term  
Structural market deficits expected to  
persist  
No significant new supply sources are  
apparent  
to  
fill  
the  
gap

limited  
number  
of quality projects available for  
development

#### Fundamentals Remain Strong

Following three consecutive quarters of  
substantial price movements for zircon, there  
was a moderation in the price increase for Q4  
2011, with suppliers achieving 10-15% higher  
prices QoQ for shipments in the last quarter  
of the year

China has had the most significant influence  
on zircon offtake, as the output of ceramic  
tiles in the country has slowed in response to  
a weaker domestic housing market

The softer zircon demand resulted in a  
supplier response ahead of the seasonally  
slow shipping period in Q1 2012 associated  
with subdued market activity around Chinese  
New Year, and resulted in some inventory  
building at mine sites

Zircon prices are expected to stabilize in the  
next quarter before trending up in the second  
half of the year as market conditions improve

25

IV. Conclusion

TiO  
2  
pigment  
producers  
are  
limited  
in  
their  
ability  
to

make  
significant  
capacity  
expansions  
to  
meet  
incremental  
demand  
due  
to the constrained ore market  
Access to ore is critical for any meaningful capacity increases  
Limited substitutes  
Time and cost to build greenfield plants  
Tronox management estimates that during 2007-2009, approximately 7% of global capacity was shuttered  
The  
projected  
expansion  
of  
TiO  
2  
pigment  
supply  
reflects  
announced  
but  
not  
completed  
production  
facilities,  
most  
of  
which  
are in China and producing via the sulfate process  
Current supply dynamics and projected demand increases is expected to result in a continued favorable pricing  
environment over the long term

(~38.5% of

voting rights)

\*Note:

Assuming no Tronox Incorporated shareholders elect to receive exchangeable shares in Tronox Limited.

On September 26, 2011, Tronox entered into a definitive

agreement to acquire Exxaro Resources

( Exxaro ) mineral

sands operations, which will create the world s largest vertically-

integrated

TiO

2

pigment

company

( New

Tronox )

Exxaro will receive approximately 38.5% of the common

equity in New Tronox in exchange for its mineral sands operations, which will be contributed debt free. Exxaro will retain a 26% ownership interest in the South African operations of the Mineral Sands business in order to comply with South African BEE ownership requirements.

For the LTM period ended 12/31/2011, New Tronox would have generated pro forma revenues of \$2,306 million and Adjusted EBITDA of \$844 million (37% Adjusted EBITDA margin)

New Tronox will have approximately 3,500 employees and 16 locations around the world

The acquisition is expected to close in Q2 2012

Tronox has refinanced its Senior Secured Term Loan (\$425 million at signing) with a new \$550 million Senior Secured Term Loan and \$150 million Senior Secured Delayed Draw Term Loan (together, the Term Facility )

The Term Facility expressly permits the Exxaro Mineral Sands acquisition and, together with cash on hand, will fund all cash uses to permit the Exxaro Mineral Sands acquisition

Tronox's existing \$125 million ABL Revolver has been amended and will remain outstanding

Exxaro Transaction Detail

Transaction Structure Detail

Current Tronox shareholders to exchange existing common stock for new Class A shares in Tronox Limited, a newly-formed Australian-domiciled corporation and \$12.50 per share

Option to receive exchangeable shares with right to exchange later into Class A shares and \$12.50 per share, subject to minimum and maximum (with pro ration) election thresholds

Exxaro contributing mineral sands operations to New Tronox in exchange for Class

B shares in Tronox Limited

Exxaro to retain 26% direct minority ownership in the South African businesses to comply with South African BEE ownership requirements

Approximately 10.0 million shares will be issued to Exxaro excluding put/call shares

Put/call shares: 1.4 million shares in exchange for Exxaro's 26% direct interest in the South African operations in the event that the BEE compliance structure is no longer required

Transaction is taxable to Tronox shareholders

Pro Forma Shares Outstanding

25.9 million shares outstanding (excluding Exxaro's put/call shares)

Intention to list the NYSE after closing

30

30

Key Governance Terms

31

Management and Pro

Forma Board of

Directors

Exxaro Lock-up and

Standstill Provisions

9 member board comprising:

6 Class A directors (nominated by Tronox)

3 Class B directors (nominated by Exxaro)

Tom Casey to remain Chairman & CEO of  
combined company

Key members of Exxaro's senior management expected to join Tronox including current leader of mining operations

Three-year lockup period for Exxaro

Standstill limiting Exxaro's ownership to less than 45% until the third anniversary of the transaction

Thereafter, board approval process and/or majority support from unaffiliated shareholders required in order for Exxaro to go above 50%

Key Governance Terms (cont d)

Limited significant matters require supermajority (6 of 9) approval at board level, including:

Change in Executive Management

Material acquisitions / dispositions

Sale of the Company

Decision to pay dividends

Class voting (approval of Class A and Class B shareholders)

voting separately) to approve merger or sale of the company  
Majority of all the shares in each class for as long as Exxaro's  
Class B voting interest is at least 20%  
Receipt of all regulatory approvals  
Effective New Tronox and Tronox Inc. registration statement  
Tronox shareholder approval  
\$20  
million  
termination  
fee  
if  
Exxaro  
terminates  
following  
a  
fiduciary  
change in recommendation by Tronox's board

Change of Control  
Provisions  
Key Conditions to  
Closing

## Tronox Mineral Resources & Reserves

### Endnotes

33

33

1

Mineral Resources are quoted inclusive of mineral resources that have been modified to ore reserves.

2

Tonnages are quoted in metric million tonnes.

3

"ROM" stands for Run of Mine, which is a mining term that means a stockpile of ore that has been created without any blending meaning that the ore has been mined and transported to the stockpile location in its original condition. ROM is quoted in million tonnes.

4

All extraction methods are open- cut mining operations.

5

"LoMP" stands for Life of Mine Plan, which means either the total number of years needed to extract reserves from a designed design and costing study of an existing operation in which appropriate assessments have been made of realistic assumed modifications demonstrate at the time of reporting that extracting is reasonably justified.

6

Proven reserves means the economically mineable material derived from a measured resource. Proven reserves are estimated with a high level of confidence, include contaminating materials and allow for losses that are expected to occur when the material is mined.

7

Probable reserves means the economically mineable material derived from a measured or indicated resource, or both. Probable reserves are estimated at a lower level of confidence than proven reserves, include contaminating materials and allow for losses that are expected to occur when the material is mined.

8

A renewal for the Port Durnford prospecting right has been submitted. The outcome is still pending.

9

A renewal for the Centane prospecting right has been submitted. The outcome is still pending.

10

A portion of the measured resources within Namakwa Sands's mining right, but falling outside the boundary of the approved environmental management plan ("EMP"), was converted to probable reserves pending approval from the DMR to extend Namakwa Sands's mining right. Exxaro Mineral Sands submitted an application to the DMR to extend the Namakwa Sands's EMP boundary, which was approved in 2012.

11

In 2011, the Namakwa Sands proven and probable reserves amount decreased by approximately 130 million tonnes from the 2010 level due to mining of the reserves and the exclusion in 2011 of the east orange feldspathic sand ("EOFS") material from Namakwa Sands's mineral reserves following a pre- feasibility study conducted in 2011, which concluded that building a proposed new plant to process the EOFS material was not currently economically feasible. The EOFS material, however, still remains part of Namakwa Sands's mineral reserves. Exxaro Mineral Sands is investigating alternative technologies for processing the EOFS material.

12

Block P, Port Dunford, Centane, and Cooljarloo West are exploratory programs without known reserves.
