

NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND

Form 497

May 16, 2016

May 9, 2016

PROSPECTUS

## 2.3 Million Common Shares

# Nuveen California Dividend Advantage Municipal Fund

---

Nuveen California Dividend Advantage Municipal Fund (the Fund) is a diversified, closed-end management investment company. The Fund seeks to provide current income exempt from both regular federal and California income taxes. The Fund's secondary investment objective is to enhance portfolio value relative to the municipal bond market by investing in tax-exempt municipal securities that Nuveen Asset Management, LLC (Nuveen Asset Management), the Fund's sub-adviser, believes are underrated or undervalued or that represent municipal market sectors that are undervalued. The Fund seeks to achieve its investment objectives by investing, under normal circumstances, at least 80% of its Managed Assets (as defined below under *Portfolio Contents*) in municipal securities and other related investments the income from which is exempt from regular federal and California income taxes. Under normal circumstances, the Fund invests at least 80% of its Managed Assets in municipal securities that, at the time of investment, are investment grade quality. The Fund may invest up to 20% of its Managed Assets in municipal securities that at the time of investment are rated below investment grade or are unrated but judged to be of comparable quality by Nuveen Asset Management. No more than 10% of the Fund's Managed Assets may be invested in municipal securities rated below B3/B- or that are unrated but judged to be of comparable quality by Nuveen Asset Management. The Fund cannot assure you that it will achieve its investment objectives.

**Investing in the Fund's common shares involves certain risks that are described in the Risk Factors section of this prospectus (the Prospectus).**

Neither the U.S. Securities and Exchange Commission (the SEC) nor any state securities commission has approved or disapproved of these securities or determined if this Prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

You should read this Prospectus, which contains important information about the Fund, before deciding whether to invest and retain it for future reference. A Statement of Additional Information dated May 9, 2016 (the SAI), containing additional information about the Fund, has been filed with the SEC and is incorporated by reference in its entirety into this Prospectus. You may request a free copy of the SAI, the table of contents of which is on the last page of this Prospectus, annual and semi-annual reports to shareholders and other information about the Fund, and make shareholder inquiries by calling (800) 257-8787, by writing to the Fund or from the Fund's website (<http://www.nuveen.com>). The information contained in, or that can be accessed through, the Fund's website is not part of this Prospectus. You also may obtain a copy of the SAI (and other information regarding the Fund) from the SEC's web site (<http://www.sec.gov>).

Edgar Filing: NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND - Form 497

The Fund's common shares do not represent a deposit or obligation of, and are not guaranteed or endorsed by, any bank or other insured depository institution, and are not federally insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board or any other governmental agency.

*Portfolio Contents.* As a fundamental policy, under normal circumstances, the Fund invests at least 80% of its Managed Assets (as defined below) in municipal securities and other related investments the income from

which is exempt from regular federal and California income taxes. The Fund invests in tax-exempt municipal securities that Nuveen Asset Management believes are underrated or undervalued or that represent municipal market sectors that are undervalued. The Fund has not established any limit on the percentage of its portfolio that may be invested in municipal bonds subject to the alternative minimum tax provisions of federal tax law, and the Fund expects that a substantial portion of the income it produces will be includable in alternative minimum taxable income. As a non-fundamental policy, under normal circumstances, the Fund invests at least 80% of its Managed Assets in investment grade securities that at the time of investment are investment grade quality. The Fund will invest at least 80% of its net assets in investment grade quality municipal securities. Investment grade quality securities are those that are, at the time of investment, either (i) rated by one of the nationally recognized statistical rating organizations ( NRSROs ) that rate such securities within the four highest letter grades (by Standard & Poor's Corporation Ratings Group, a division of The McGraw-Hill Companies ( S&P ), Moody's Investors Services, Inc. ( Moody's ) or Fitch Ratings, Inc. ( Fitch ) (BBB- or better for S&P and Fitch and Baa3 or better for Moody's)), or (ii) unrated by any NRSRO but judged to be of comparable quality by Nuveen Asset Management. Investment grade securities may include securities that, at the time of investment, are rated below investment grade by S&P, Moody's or Fitch, so long as at least one NRSRO rates such securities within the four highest grades (such securities are commonly referred to as split-rated securities). Also as a non-fundamental policy, the Fund may invest up to 20% of its Managed Assets in municipal securities that at the time of investment are rated below investment grade or are unrated but judged to be of comparable quality by Nuveen Asset Management. Additionally, as a non-fundamental policy, no more than 10% of the Fund's Managed Assets may be invested in municipal securities rated below B3/B- or that are unrated but judged to be of comparable quality by Nuveen Asset Management. Municipal securities of below investment grade quality are regarded as having predominately speculative characteristics with respect to capacity to pay interest and repay principal, and are commonly referred to as junk bonds. The Fund may invest up to approximately 15% of its Managed Assets in inverse floating rate securities. The Fund currently employs financial leverage primarily through its outstanding variable rate demand preferred shares (referred to herein as VRDP Shares ). Managed Assets means the total assets of the Fund, minus the sum of its accrued liabilities (other than Fund liabilities incurred for the express purpose of creating leverage). Total assets for this purpose shall include assets attributable to the Fund's use of effective leverage (whether or not those assets are reflected in the Fund's financial statements for purposes of generally accepted accounting principles), such as, but not limited to, the portion of assets in special purpose trusts of which the Fund owns the inverse floater certificates that has been effectively financed by the trust's issuance of floating rate certificates.

*Adviser and Sub-Adviser.* Nuveen Fund Advisors, LLC, the Fund's investment adviser, is responsible for determining the Fund's overall investment strategies and their implementation. Nuveen Asset Management, LLC is the Fund's investment sub-adviser and oversees the day-to-day investment operations of the Fund.

The minimum price on any day at which common shares may be sold will not be less than the current net asset value per share plus the per share amount of the commission to be paid to the Fund's distributor, Nuveen Securities, LLC ( Nuveen Securities ). The Fund and Nuveen Securities will suspend the sale of common shares if the per share price of the shares is less than the minimum price. The Fund currently intends to distribute the shares offered pursuant to this Prospectus primarily through at-the-market transactions, although from time to time it may also distribute shares through an underwriting syndicate or a privately negotiated transaction. To the extent shares are distributed other than through at-the-market transactions, the Fund will file a supplement to this Prospectus describing such transactions. For information on how common shares may be sold, see the Plan of Distribution section of this Prospectus.

As of May 2, 2016, the Fund has not sold any Common Shares in this offering.

Common shares are listed on the New York Stock Exchange (the NYSE ). The trading or ticker symbol of the Fund is NAC. The Fund's closing price on the NYSE on May 2, 2016 was \$16.27.

The Fund is not making an offer of these securities in any state where the offer is not permitted. You should not assume that the information contained in this Prospectus is accurate as of any date other than the date on the front of this Prospectus. The Fund will update this Prospectus to reflect any material changes to the disclosures herein.**

## PROSPECTUS SUMMARY

*This is only a summary. You should review the more detailed information contained elsewhere in this Prospectus and in the Statement of Additional Information (the SAI).*

### **The Fund**

Nuveen California Dividend Advantage Municipal Fund (the Fund) is a diversified, closed-end investment management company. See The Fund. The Fund's common shares, \$0.01 par value (Common Shares), are traded on the New York Stock Exchange (the NYSE) under the symbol NAC. See Description of Common Shares. As of March 31, 2016, the Fund had 107,383,777 Common Shares outstanding, 6,996 of variable rate demand preferred shares (referred to herein as VRDP Shares) and net assets applicable to Common Shares of \$1,738,415,612.

### **Investment Objectives and Policies**

The Fund's investment objective is to provide current income exempt from regular federal and California income tax. The Fund's secondary investment objective is to enhance portfolio value relative to the municipal bond market by investing in tax-exempt municipal securities that Nuveen Asset Management (defined below under Sub-Adviser), the Fund's investment sub-adviser, believes are underrated or undervalued or that represent municipal market sectors that are undervalued. The Fund cannot assure you that it will achieve its investment objectives.

As a fundamental investment policy, under normal circumstances, the Fund invests at least 80% of its Managed Assets in municipal securities and other related investments the income from which is exempt from regular federal and California income taxes (as used in this document, the term municipal securities refers to all such investments collectively). The Fund's investment objectives and certain investment policies identified as such are considered fundamental and may not be changed without shareholder approval.

Managed Assets means the total assets of the Fund, minus the sum of its accrued liabilities (other than Fund liabilities incurred for the express purpose of creating leverage). Total assets for this purpose shall include assets attributable to the Fund's use of effective leverage (whether or not those assets are reflected in the Fund's financial statements for purposes of generally accepted accounting principles), such as, but not limited to, the portion of assets in special purpose trusts of which the Fund owns the inverse floater certificates that has been effectively financed by the trust's issuance of floating rate certificates.

As a non-fundamental investment policy, under normal circumstances, the Fund invests at least 80% of its Managed Assets in investment grade securities that, at the time of investment are rated investment grade or are unrated but judged to be of comparable

quality by Nuveen Asset Management. Also as a non-fundamental investment policy, under normal circumstances, the Fund may invest up to 20% of its Managed Assets in municipal securities that at the time of investment are rated below investment grade or are unrated but judged to be of comparable quality by Nuveen Asset Management. Additionally, as a non-fundamental policy, no more than 10% of the Fund's Managed Assets may be invested in municipal securities rated below B3/B- or that are unrated but judged to be of comparable quality by Nuveen Asset Management.

As of March 31, 2016, the effective maturity of the Fund's portfolio was 20.84 years. The Fund will generally invest in municipal securities with a weighted average maturity of at least 15 years, but it may be lengthened or shortened depending on market conditions and on an assessment by the Fund's portfolio manager of which segments of the municipal securities market offer the most favorable relative investment values and opportunities for tax-exempt income and total return.

The Fund has not established any limit on the percentage of its portfolio that may be invested in municipal bonds subject to the alternative minimum tax provisions of federal tax law, and the Fund expects that a substantial portion of the income it produces will be includable in alternative minimum taxable income. For a discussion of how the federal alternative minimum tax may affect shareholders, see Tax Matters.

The Fund will invest at least 80% of its net assets in investment grade quality municipal securities. Investment grade quality securities are those that are, at the time of investment, either (i) rated by one of the nationally recognized statistical rating organizations (NRSROs) that rate such securities within the four highest letter grades (by Standard & Poor's Corporation Ratings Group, a division of The McGraw-Hill Companies (S&P), Moody's Investors Services, Inc. (Moody's) or Fitch Ratings, Inc. (Fitch) (BBB- or better for S&P and Fitch and Baa3 or better for Moody's)), or (ii) unrated by any NRSRO but judged to be of comparable quality by Nuveen Asset Management. Investment grade securities may include securities that, at the time of investment, are rated below investment grade by S&P, Moody's or Fitch, so long as at least one NRSRO rates such securities within the four highest grades (such securities are commonly referred to as split-rated securities). Municipal securities of below investment grade quality are regarded as having predominately speculative characteristics with respect to capacity to pay interest and repay principal, and are commonly referred to as junk bonds.

As of February 29, 2016, approximately 88% of the Fund's total investment exposure was invested in municipal securities rated investment grade by an NRSRO (including S&P, Moody's and Fitch).

The relative percentages of the value of the investments attributable to investment grade municipal securities and to below investment grade municipal securities could change over time as a result of rebalancing the Fund's assets by Nuveen Asset Management, market value fluctuations, issuance of additional shares and other events.

During temporary defensive periods or in order to keep the Fund's cash fully invested, including during the period when the net proceeds of the offering of Common Stock are being invested, the Fund may deviate from its investment policies and objectives. During such periods, the Fund may invest up to 100% of its net assets in short-term investments, including high quality, short-term securities that may be either tax-exempt or taxable. The Fund intends to invest in taxable short-term investments only in the event that suitable tax-exempt short-term investments are not available at reasonable prices and yields. Investment in taxable short-term investments would result in a portion of your dividends being subject to regular federal income tax, and if the proportion of taxable investments exceeded 50% of the Fund's total assets as of the close of any quarter of the Fund's taxable year, the Fund would not satisfy the general eligibility test that would permit it to pay exempt-interest dividends for that taxable year. Such transactions will be used solely to reduce risk. There can be no assurance that such strategies will be successful. For a more complete discussion of the Fund's portfolio composition, see "The Fund's Investments."

See "The Fund's Investments" and "Risk Factors."

**Investment Adviser**

Nuveen Fund Advisors, LLC ( "NFALLC" ), the Fund's investment adviser, is responsible for determining the Fund's overall strategy and its implementation. NFALLC, a registered investment adviser, is a wholly-owned subsidiary of Nuveen Investments, Inc. ( "Nuveen Investments" ). Founded in 1898, Nuveen Investments and its affiliates had approximately \$225 billion in assets as of December 31, 2015. See "Management of the Fund" Investment Adviser, Sub-Adviser and Portfolio Manager.

Nuveen Investments is a wholly-owned subsidiary of TIAA. TIAA is a national financial services organization with approximately \$854 billion in assets under management as of December 31, 2015, and is the leading provider of retirement services in the academic, research, medical and cultural fields. Nuveen Investments operates as a separate subsidiary within TIAA's asset management business.

**Sub-Adviser**

Nuveen Asset Management, LLC ( "Nuveen Asset Management" ) serves as the Fund's sub-adviser. Nuveen Asset Management, a registered investment adviser, is a wholly-owned subsidiary of NFALLC. Nuveen Asset Management oversees the day-to-day investment operations of the Fund.

Nuveen Securities, LLC ( Nuveen Securities ), a registered broker-dealer affiliate of NFALLC and Nuveen Asset Management, is involved in the offering of the Fund's Common Shares. See Plan of Distribution Distribution Through At-The-Market Transactions.

### Use of Leverage

The Fund uses leverage to seek to enhance total returns. Currently, the Fund employs leverage through its outstanding VRDP Shares, which have seniority over the Common Shares. The Fund also invests residual interest certificates of tender option bond trusts, also called inverse floating rate securities, that have the economic effect of leverage because the Fund's investment exposure to the underlying bonds held by the trust have been effectively financed by the trust's issuance of floating rate certificates. See Inverse Floating Rate Securities and Risk Factors Inverse Floating Rate Securities. The combined economic effect of the total leverage used by the Fund is referred to herein as effective leverage.

For the fiscal year ended February 29, 2016, the average liquidation preference of the VRDP Shares outstanding and the annual dividend rate on the VRDP Shares were \$699.6 million and 0.12%, respectively. As of February 29, 2016, the Fund's effective leverage was approximately 35% of its Managed Assets.

During the current fiscal period, the Fund, along with certain other funds managed by the Adviser ( Participating Funds ), established a 364-day, \$2.53 billion standby credit facility with a group of lenders, under which the Participating Funds may borrow for various purposes other than leveraging for investment purposes. A large portion of this facility's capacity (and its associated costs as described below) is currently dedicated for use by a small number of Participating Funds, which does not include the Fund. The remaining capacity under the facility (and the corresponding portion of the facility's annual costs) is separately dedicated to most of the other open-end funds in the Nuveen fund family, along with a number of Nuveen closed-end funds, including the Fund. The credit facility expires in July 2016 unless extended or renewed. During the current fiscal period, the Fund did not utilize this facility.

Leverage involves special risks. See Risk Factors Leverage Risk. There is no assurance that the Fund's leveraging strategy will be successful. The Fund will seek to invest the proceeds of any future offerings in a manner consistent with the Fund's investment objectives and policies. See Use of Leverage.

The Fund pays a management fee to NFALLC (which in turn pays a portion of its fee to the Fund's sub-adviser, Nuveen Asset Management) based on a percentage of Managed Assets. Managed Assets include the proceeds realized and managed from the Fund's use of leverage as set forth in the Fund's investment management agreement. NFALLC and Nuveen Asset Management will be responsible for using leverage to pursue the Fund's investment

objective, and will base their decision regarding whether and how much leverage to use for the Fund based on their assessment of whether such use of leverage will advance the Fund's investment objective. However, the fact that a decision to increase the Fund's leverage will have the effect, all other things being equal, of increasing Managed Assets and therefore NFALLC's and Nuveen Asset Management's fees means that NFALLC and Nuveen Asset Management may have a conflict of interest in determining whether to increase the Fund's use of leverage. NFALLC and Nuveen Asset Management will seek to manage that potential conflict by only increasing the Fund's use of leverage when they determine that such increase is consistent with the Fund's investment objective, and by periodically reviewing the Fund's performance and use of leverage with the Fund's Board of Trustees.

#### **Offering Methods**

The Fund may offer shares using one or more of the following methods: (i) at-the-market transactions through one or more broker-dealers that have entered into a selected dealer agreement with Nuveen Securities, one of the Fund's underwriters; (ii) through an underwriting syndicate; and (iii) through privately negotiated transactions between the Fund and specific investors. See Plan of Distribution.

*Distribution Through At-The-Market Transactions.* The Fund from time to time may issue and sell its Common Shares through Nuveen Securities, to certain broker-dealers that have entered into selected dealer agreements with Nuveen Securities. Currently, Nuveen Securities has entered into a selected dealer agreement with UBS Securities LLC (UBS) pursuant to which UBS will be acting as Nuveen Securities' sub-placement agent with respect to at-the-market offerings of Common Shares. Common Shares will only be sold on such days as shall be agreed to by the Fund and Nuveen Securities. Common Shares will be sold at market prices, which shall be determined with reference to trades on the NYSE, subject to a minimum price to be established each day by the Nuveen Securities. The minimum price on any day will not be less than the current net asset value per share plus the per share amount of the commission to be paid to Nuveen Securities. The Fund and Nuveen Securities will suspend the sale of Common Shares if the per share price of the shares is less than the minimum price.

The Fund will compensate Nuveen Securities with respect to sales of the Common Shares at a commission rate of up to 1.0% of the gross proceeds of the sale of Common Shares. Nuveen Securities will compensate broker-dealers participating in the offering at a rate of up to 0.8% of the gross sales proceeds of the sale of Common Shares sold by that broker-dealer.

Settlements of Common Share sales will occur on the third business day following the date of sale. In connection with the sale of the

Common Shares on behalf of the Fund, Nuveen Securities may be deemed to be an underwriter within the meaning of the Securities Act of 1933, as amended (the "1933 Act"), and the compensation of Nuveen Securities may be deemed to be underwriting commissions or discounts. Unless otherwise indicated in a further Prospectus supplement, Nuveen Securities will act as underwriter on a reasonable efforts basis.

The offering of Common Shares pursuant to the Distribution Agreement (defined below under "Plan of Distribution - Distribution Through At-The-Market Transactions") will terminate upon the earlier of (i) the sale of all Common Shares subject thereto or (ii) termination of the Distribution Agreement. The Fund and Nuveen Securities each have the right to terminate the Distribution Agreement in its discretion at any time. See "Plan of Distribution - Distribution Through At-The-Market Transactions." The Fund currently intends to distribute the shares offered pursuant to this Prospectus primarily through at-the-market transactions, although from time to time it may also distribute shares through an underwriting syndicate or a privately negotiated transaction. To the extent shares are distributed other than through at-the-market transactions, the Fund will file a supplement to this Prospectus describing such transactions.

UBS, its affiliates and their respective employees hold or may hold in the future, directly or indirectly, investment interests in Nuveen Investments and its funds. The interests held by employees of UBS or its affiliates are not attributable to, and no investment discretion is held by, UBS or its affiliates.

The Fund's closing price on the NYSE on May 2, 2016, was \$16.27.

*Distribution Through Underwriting Syndicates.* The Fund from time to time may issue additional Common Shares through a syndicated secondary offering. In order to limit the impact on the market price of the Fund's Common Shares, underwriters will market and price the offering on an expedited basis (e.g., overnight or similarly abbreviated offering period). The Fund will launch a syndicated offering on a day, and upon terms, mutually agreed upon between the Fund, Nuveen Securities and the underwriting syndicate.

The Fund will offer its shares at a price equal to a specified discount of up to 5% from the closing market price of the Fund's Common Shares on the day prior to the offering date. The applicable discount will be negotiated by the Fund and Nuveen Securities in consultation with the underwriting syndicate on a transaction-by-transaction basis. The Fund will compensate the underwriting syndicate out of the proceeds of the offering based upon a sales load of up to 4% of the gross proceeds of the sale of Common Shares. The minimum net proceeds per share to the Fund will not be less than the greater of (i) the Fund's latest net asset value per share of Common Shares or (ii) 91% of the closing market price of the Fund's Common Shares on

the day prior to the offering date. See Plan of Distribution Distribution Through Underwriting Syndicates.

*Distribution Through Privately Negotiated Transactions.* The Fund, through Nuveen Securities, from time to time may sell directly to, and solicit offers from, institutional and other sophisticated investors, who may be deemed to be underwriters as defined in the 1933 Act for any resale of Common Shares.

The terms of such privately negotiated transactions will be subject to the discretion of the management of the Fund. In determining whether to sell Common Shares through a privately negotiated transaction, the Fund will consider relevant factors including, but not limited to, the attractiveness of obtaining additional funds through the sale of Common Shares, the purchase price to apply to any such sale of Common Shares and the investor seeking to purchase the Common Shares.

Common Shares issued by the Fund through privately negotiated transactions will be issued at a price equal to the greater of (i) the net asset value per share of the Fund's Common Shares or (ii) at a discount ranging from 0% to 5% of the average daily closing market price of the Fund's Common Shares at the close of business on the two business days preceding the date upon which Common Shares are sold pursuant to the privately negotiated transaction. The applicable discount will be determined by the Fund on a transaction-by-transaction basis. See Plan of Distribution Distribution Through Privately Negotiated Transactions.

The principal business address of Nuveen Securities is 333 West Wacker Drive, Suite 3300, Chicago, Illinois 60606.

### **Special Risk Considerations**

Investment in the Fund involves special risk considerations, which are summarized below. The Fund is designed as a long-term investment and not as a trading vehicle. The Fund is not intended to be a complete investment program. See Risk Factors for a more complete discussion of the special risk considerations of an investment in the Fund.

*Investment and Market Risk.* An investment in the Fund's Common Shares is subject to investment risk, including the possible loss of the entire principal amount that you invest. Your investment in Common Shares represents an indirect investment in the municipal securities owned by the Fund, substantially all of which are traded on a national securities exchange or in the over-the-counter markets. Your Common Shares at any point in time may be worth less than your original investment, even after taking into account the reinvestment of Fund dividends and distributions. See Risk Factors Investment and Market Risk

*Recent Market Circumstances.* In the recent past, the debt and equity capital markets in the United States were negatively impacted by significant write-offs in the financial services sector relating to sub-prime mortgages and the re-pricing of credit risk in the broadly syndicated market, among other things. In addition, domestic and international markets have experienced acute turmoil due to a variety of factors, including economic unrest in Italy, Greece, Spain, Ireland, Portugal, other European Union countries and China. These events, along with the downgrade to the United States credit rating, deterioration of the housing market, the failure of major financial institutions and the resulting United States federal government actions (as well as the actions of many governments or quasi-governmental organizations throughout the world, which responded to the turmoil with a variety of significant fiscal and monetary policy changes) led in the recent past, and may lead in the future, to worsening general economic circumstances, which did, and could, materially and adversely impact the broader financial and credit markets and reduce the availability of debt and equity capital for the market as a whole and financial firms in particular. These events may increase the volatility of the value of securities owned by the Fund and/or result in sudden and significant valuation decreases in its portfolio. These events also may make it more difficult for the Fund to accurately value its securities or to sell its securities on a timely basis.

While the extreme volatility and disruption that U.S. and global markets experienced for an extended period of time beginning in 2007 and 2008 has generally subsided, uncertainty and periods of volatility remain, and risks to a robust resumption of growth persist. Federal Reserve policy, including with respect to certain interest rates as well as the decision to cease purchasing securities pursuant to quantitative easing, may cause interest rates to rise, and may adversely affect the value, volatility and liquidity of dividend and interest paying securities. Market volatility, rising interest rates and/or a return to unfavorable economic circumstances could impair the Fund's ability to achieve its investment objectives.

General market uncertainty and consequent re-pricing of risk have led to market imbalances of sellers and buyers, which in turn have resulted in significant valuation uncertainties in a variety of securities and significant and rapid value decline in certain instances. Additionally, periods of market volatility remain, and may continue to occur in the future, in response to various political, social and economic events both within and outside of the United States. These circumstances resulted in, and in many cases continue to result in, greater price volatility, less liquidity, widening credit spreads and a lack of price transparency, with many securities remaining illiquid and of uncertain value. Such market circumstances may make valuation of some of the Fund's investments uncertain and/or result in sudden and significant valuation increases or declines in its holdings. If there is a significant decline in the value of the Fund's portfolio, this may impact the asset coverage levels for any outstanding leverage the Fund may have.

*Legislation and Regulatory Risk.* At any time after the date of this prospectus, legislation or additional regulations may be enacted that could negatively affect the assets of the Fund, securities held by the Fund or the issuers of such securities. Fund shareholders may incur increased costs resulting from such legislation or additional regulation. There can be no assurance that future legislation, regulation or deregulation will not have a material adverse effect on the Fund or will not impair the ability of the Fund to achieve its investment objectives.

*Economic and Political Events Risk.* The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the bonds of similar projects (such as those relating to the education, health care, housing, transportation, or utilities industries), industrial development bonds, or in particular types of municipal securities (such as general obligation bonds, private activity bonds or moral obligation bonds). Such developments may adversely affect a specific industry or local political and economic conditions, and thus may lead to declines in the bonds' creditworthiness and value.

*Market Discount from Net Asset Value.* Shares of closed-end investment companies like the Fund have during some periods traded at prices higher than net asset value and have during other periods traded at prices lower than net asset value. The Fund cannot predict whether Common Shares will trade at, above or below net asset value. This characteristic is a risk separate and distinct from the risk that the Fund's net asset value could decrease as a result of investment activities. Investors bear a risk of loss to the extent that the price at which they sell their shares is lower in relation to the Fund's net asset value than at the time of purchase, assuming a stable net asset value. Proceeds from the sale of Common Shares in this offering will be reduced by shareholder transaction costs (if applicable, which vary depending on the offering method used). The net asset value per Common Share will be reduced by costs associated with any future issuances of common or preferred shares, including VRDP Shares. Common Shares are designed primarily for long-term investors, and you should not view the Fund as a vehicle for trading purposes. See Risk Factors Market Discount from Net Asset Value.

*Credit and Below Investment Grade Risk.* Credit risk is the risk that one or more municipal securities in the Fund's portfolio will decline in price, or the issuer thereof will fail to pay interest or principal when due, because the issuer experiences a decline in its financial status. Credit risk is increased when a portfolio security is downgraded or the perceived creditworthiness of the issuer deteriorates. The Fund may invest up to 20% (measured at the time of investment) of its Managed Assets in municipal securities that are rated below investment grade or that are unrated but judged to be of comparable quality by Nuveen Asset Management; provided, that no more than 10% of the Fund's

Managed Assets may be invested in municipal securities rated below B-/B3 or that are unrated but judged to be of comparable quality by Nuveen Asset Management. If a municipal security satisfies the rating requirements described above at the time of investment and is subsequently downgraded below that rating, the Fund will not be required to dispose of the security. If a downgrade occurs, Nuveen Asset Management will consider what action, including the sale of the security, is in the best interests of the Fund and its shareholders. This means that the Fund may invest in municipal securities that are involved in bankruptcy or insolvency proceedings or are experiencing other financial difficulties at the time of acquisition (such securities are commonly referred to as distressed securities). Municipal securities of below investment grade quality are predominately speculative with respect to the issuer's capacity to pay interest and repay principal when due, and are susceptible to default or decline in market value due to adverse economic and business developments, and are commonly referred to as junk bonds. Also, to the extent that the rating assigned to a municipal security in the Fund's portfolio is downgraded by any NRSRO, the market price and liquidity of such security may be adversely affected. The market values for municipal securities of below investment grade quality tend to be volatile, and these securities are less liquid than investment grade municipal securities. For these reasons, an investment in the Fund compared with a portfolio consisting solely of investment grade securities, may experience the following:

increased price sensitivity resulting from changing interest rates and/or a deteriorating economic environment;

greater risk of loss due to default or declining credit quality;

adverse issuer specific events that are more likely to render the issuer unable to make interest and/or principal payments; and

the possibility that a negative perception of the below investment grade market develops, resulting in the price and liquidity of below investment grade securities becoming depressed, and this negative perception could last for a significant period of time.

See Risk Factors Credit and Below Investment Grade Risk.

*Interest Rate Risk.* Generally, when market interest rates rise, bond prices fall, and vice versa. Interest rate risk is the risk that the municipal securities in the Fund's portfolio will decline in value because of increases in market interest rates. As interest rates decline, issuers of municipal securities may prepay principal earlier than scheduled, forcing the Fund to reinvest in lower-yielding securities and potentially reducing the Fund's income. As interest rates increase, slower than expected principal payments may extend the average life of securities, potentially locking in a below-market interest rate and reducing the Fund's value. Currently, market interest rates are at or near historically low levels. In typical market interest rate

environments, the prices of longer-term municipal securities generally fluctuate more than prices of shorter-term municipal securities as interest rates change. In comparison to maturity (which is the date on which a debt instrument ceases and the issuer is obligated to repay the principal amount), duration is a measure of the price volatility of a debt instrument as a result of changes in market rates of interest, based on the weighted average timing of the instrument's expected principal and interest payments. Duration differs from maturity in that it considers a security's yield, coupon payments, principal payments and call features in addition to the amount of time until the security finally matures. As the value of a security changes over time, so will its duration.

Prices of securities with longer durations tend to be more sensitive to interest rate changes than securities with shorter durations. In general, a portfolio of securities with a longer duration can be expected to be more sensitive to interest rate changes than a portfolio with a shorter duration. For example, the price of a bond with an effective duration of two years will rise (fall) two percent for every one percent decrease (increase) in its yield, and the price of a five-year duration bond will rise (fall) five percent for a one percent decrease (increase) in its yield.

Yield curve risk is the associated with either a flattening or steepening of the yield curve, which is a result of changing yields among comparable bonds with different maturities. When market interest rates, or yields, increase, the price of a bond will decrease and vice versa. When the yield curve shifts, the price of the bond, which was initially priced based on the initial yield curve, will change in price. If the yield curve flattens, then the yield spread between long- and short-term interest rates narrows, and the price of the bond will change accordingly. If the bond is short-term and the yield decreases, the price of this bond will increase. If the yield curve steepens, this means that the spread between long- and short-term interest rates increases. Therefore, long-term bond prices, like the ones held by the Fund, will decrease relative to short-term bonds. Changes in the yield curve are based on bond risk premiums and expectations of future interest rates.

Because the Fund will invest primarily in long-term municipal securities, the Common Stock net asset value and market price per share will fluctuate more in response to changes in market interest rates than if the Fund invested primarily in shorter-term municipal securities. Because the values of lower-rated and comparable unrated debt securities are affected both by credit risk and interest rate risk, the price movements of such lower grade securities in response to changes in interest rates typically have not been highly correlated to the fluctuations of the prices of investment grade quality securities in response to changes in market interest rates. The Fund's investments in interest rate floating securities, as described herein, will tend to increase Common Stock interest rate risk. See Risk Factors Interest Rate Risk.

*Municipal Securities Market Risk.* The amount of public information available about the municipal securities in the Fund's portfolio is generally less than that for corporate equities or bonds, and the investment performance of the Fund may therefore be more dependent on the analytical abilities of Nuveen Asset Management than if the Fund were a stock fund or taxable bond fund. The secondary market for municipal securities, particularly the below investment grade bonds in which the Fund may invest, also tends to be less well-developed or liquid than many other securities markets, which may adversely affect the Fund's ability to sell its bonds at attractive prices. See *Risk Factors* *Municipal Securities Market Risk* and *Risk Factors* *Special Risks Related to Certain Municipal Obligations*.

*Concentration in California Issuers.* The Fund's policy of investing in municipal securities of issuers located in California makes the Fund more susceptible to the adverse economic, political or regulatory occurrences affecting such issuers.

*Reinvestment Risk.* Reinvestment risk is the risk that income from the Fund's portfolio will decline if and when the Fund invests the proceeds from matured, traded or called bonds at market interest rates that are below the portfolio's current earnings rate. A decline in income could affect the Common Share's market price or your overall returns. See *Risk Factors* *Reinvestment Risk*.

*Tax Risk.* To qualify for the favorable U.S. federal income tax treatment generally accorded to regulated investment companies, among other things, the Fund must derive in each taxable year at least 90% of its gross income from certain prescribed sources and satisfy a diversification test on a quarterly basis. If the Fund fails to satisfy the qualifying income or diversification requirements in any taxable year, the Fund may be eligible for relief provisions if the failures are due to reasonable cause and not willful neglect and if a penalty tax is paid with respect to each failure to satisfy the applicable requirements. Additionally, relief is provided for certain de minimis failures of the diversification requirements where the Fund corrects the failure within a specified period. In order to be eligible for the relief provisions with respect to a failure to meet the diversification requirements, the Fund may be required to dispose of certain assets. If these relief provisions were not available to the Fund and it were to fail to qualify for treatment as a regulated investment company for a taxable year, all of its taxable income (including its net capital gain) would be subject to tax at regular corporate rates without any deduction for distributions to shareholders, and such distributions would be taxable as ordinary dividends to the extent of the Fund's current and accumulated earnings and profits.

To qualify to pay exempt-interest dividends, which are treated as items of interest excludable from gross income for federal income tax purposes, at least 50% of the value of the total assets of the Fund must

consist of obligations exempt from regular income tax as of the close of each quarter of the Fund's taxable year. If the proportion of taxable investments held by the Fund exceeds 50% of the Fund's total assets as of the close of any quarter of any Fund taxable year, the Fund will not for that taxable year satisfy the general eligibility test that otherwise permits it to pay exempt-interest dividends.

The Fund may enter into various types of derivatives transactions, including credit default swap contracts and interest rate swap contracts, among others. The use of such derivatives may generate taxable income. The Fund's use of derivatives may also affect the amount, timing, and character of distributions to shareholders and, therefore, may increase the amount of taxes payable by shareholders.

The value of the Fund's investments and its net asset value may be adversely affected by changes in tax rates and policies. Because interest income from municipal securities is normally not subject to regular federal income taxation, the attractiveness of municipal securities in relation to other investment alternatives is affected by changes in federal income tax rates or changes in the tax-exempt status of interest income from municipal securities. Any proposed or actual changes in such rates or exempt status, therefore, can significantly affect the demand for and supply, liquidity and marketability of municipal securities. This could in turn affect the Fund's net asset value and ability to acquire and dispose of municipal securities at desirable yield and price levels. Additionally, the Fund is not a suitable investment for individual retirement accounts, for other tax-exempt or tax-deferred accounts or for investors who are not sensitive to the federal income tax consequences of their investments.

*Leverage Risk.* The use of financial leverage created through the Fund's outstanding preferred shares, including VRDP Shares, or the use of tender option bonds creates an opportunity for increased Common Shares net income and returns, but also creates special risks for holders of Common Shares ( Common Shareholders ). There is no assurance that the Fund's leveraging strategy will be successful. The risk of loss attributable to the Fund's use of leverage is borne by Common Shareholders. The Fund's use of financial leverage can result in a greater decrease in net asset values in declining markets. The Fund's use of financial leverage similarly can magnify the impact of changing market conditions on Common Share market prices. See Risk Factors Inverse Floating Rate Securities Risk. Because the long-term municipal securities in which the Fund invests generally pay fixed rates of interest while the Fund's costs of leverage generally fluctuate with short- to intermediate-term yields, the incremental earnings from leverage will vary over time. However, the Fund may use derivatives, such as interest rate swaps, to fix the effective rate paid on all or a portion of the Fund's leverage, in an effort to lower leverage costs over an extended period. Accordingly, the Fund cannot assure you that the use of leverage will result in a higher yield or return to Common Shareholders. The income benefit from leverage

will be reduced to the extent that the difference narrows between the net earnings on the Fund's portfolio securities and its cost of leverage. The income benefit from leverage will increase to the extent that the difference widens between the net earnings on the Fund's portfolio securities and its cost of leverage. If short- or intermediate-term rates rise, the Fund's cost of leverage could exceed the fixed rate of return on longer-term bonds held by the Fund that were acquired during periods of lower interest rates, reducing income and returns to Common Shareholders. This could occur even if short- or intermediate-term and long-term municipal rates rise. Because of the costs of leverage, the Fund may incur losses even if the Fund has positive returns if they are not sufficient to cover the costs of leverage. The Fund's cost of leverage includes dividends paid on VRDP Shares, or the interest expense attributable to tender option bonds (See *Inverse Floating Rate Securities Risk*), as well as any one-time costs (e.g., issuance costs) and ongoing fees and expenses associated with such leverage.

The Fund is required to maintain certain regulatory and rating agency asset coverage requirements in connection with its use of leverage, in order to be able to maintain the ability to declare and pay Common Share distributions and to maintain the VRDP Shares rating. An NRSRO could downgrade its ratings on the Fund's outstanding preferred shares, including VRDP Shares. A ratings downgrade of the Fund's preferred shares may result in higher dividend rates and may also force the redemption of such preferred shares at what might be an inopportune time in the market. These factors may result in reduced net earnings or returns to Common Shareholders.

In order to maintain required asset coverage levels, the Fund may be required to alter the composition of its investment portfolio or take other actions, such as redeeming preferred shares or reducing leverage levels with the proceeds from portfolio transactions, at what might be an inopportune time in the market. Such actions could reduce the net earnings or returns to Common Shareholders over time.

Furthermore, the amount of fees paid to NFALLC (which in turn pays a portion of its fees to Nuveen Asset Management) for investment advisory services will be higher if the Fund uses leverage because the fees will be calculated based on the Fund's Managed Assets; this may create an incentive for NFALLC and Nuveen Asset Management to leverage the Fund.

The Fund may invest in the securities of other investment companies, which may themselves be leveraged and therefore present similar risks to those described above and magnify the Fund's leverage risk.

See *Risk Factors* *Leverage Risk* and *Use of Leverage*.

*Inverse Floating Rate Securities Risk.* The Fund may invest in inverse floating rate securities. Typically, inverse floating rate

securities represent beneficial interests in a special purpose trust (sometimes called a tender option bond trust ) formed by a third party sponsor for the purpose of holding municipal bonds. See The Fund's Investments Municipal Securities Inverse Floating Rate Securities. In general, income on inverse floating rate securities will decrease when interest rates increase and increase when interest rates decrease. Thus, distributions paid to the Fund on its inverse floaters will be reduced or even eliminated as short-term municipal interest rates rise and will increase when short-term municipal rates fall. Inverse floating rate securities generally will underperform the market for fixed rate municipal bonds in a rising interest rate environment. Investments in inverse floating rate securities may subject the Fund to the risks of reduced or eliminated interest payments and losses of principal. In addition, because of the leveraged nature of such investments, inverse floating rate securities will increase or decrease in value at a greater rate than the underlying fixed rate municipal bonds held by the tender option bond. As a result, the market value of such securities generally is more volatile than that of fixed rate securities.

The Fund may invest in inverse floating rate securities, issued by special purpose trusts that have recourse to the Fund. In Nuveen Asset Management's discretion, the Fund may enter into a separate shortfall and forbearance agreement with the third party sponsor of a special purpose trust. The Fund may enter into such recourse agreements (i) when the liquidity provider to the special purpose trust requires such an agreement because the level of leverage in the special purpose trust exceeds the level that the liquidity provider is willing to support absent such an agreement; and/or (ii) to seek to prevent the liquidity provider from collapsing the special purpose trust in the event that the municipal obligation held in the trust has declined in value. Such an agreement would require the Fund to reimburse the third-party sponsor of the trust, upon termination of the trust issuing the inverse floater, the difference between the liquidation value of the bonds held in the trust and the principal amount due to the holders of floating rate interests. In such instances, the Fund may be at risk of loss that exceeds its investment in the inverse floating rate securities.

The Fund's investments in inverse floating rate securities issued by special purpose trusts that have recourse to the Fund may be highly leveraged. The structure and degree to which the Fund's inverse floating rate securities are highly leveraged will vary based upon a number of factors, including the size of the trust itself and the terms of the underlying municipal security. An inverse floating rate security generally is considered highly leveraged if the principal amount of the short-term floating rate interests issued by the related special purpose trust is in excess of three times the principal amount of the inverse floating rate securities owned by the trust (the ratio of the principal amount of such short-term floating rate interests to the principal amount of the inverse floating rate securities is referred to as the

gearing ). In the event of a significant decline in the value of an underlying security, the Fund may suffer losses in excess of the amount of its investment (up to an amount equal to the value of the municipal securities underlying the inverse floating rate securities) as a result of liquidating special purpose trusts or other collateral required to maintain the Fund's anticipated effective leverage ratio.

The Fund's investment in inverse floating rate securities creates financial leverage that provides an opportunity for increased Common Share net income and returns, but also creates the risk that Common Share long-term returns will be reduced if the cost of leverage exceeds the net return on the Fund's investment portfolio.

Inverse floating rate securities have varying degrees of liquidity based upon the liquidity of the underlying securities deposited in a tender option bond trust. The market price of inverse floating rate securities is more volatile than the underlying securities due to leverage. The leverage attributable to such inverse floating rate securities may be called away on relatively short notice and therefore may be less permanent than more traditional forms of leverage. The Fund may be required to sell its inverse floating rate securities at less than favorable prices, or liquidate other Fund portfolio holdings in certain circumstances, including, but not limited to, the following:

If the Fund has a need for cash and the securities in a special purpose trust are not actively trading due to adverse market conditions;

If special purpose trust sponsors (as a collective group or individually) experience financial hardship and consequently seek to terminate their respective outstanding special purpose trusts; and

If the value of an underlying security declines significantly (to a level below the notional value of the floating rate securities issued by the trust) and if additional collateral has not been posted by the Fund.

See Risk Factors Inverse Floating Rate Securities Risk.

*Inflation Risk.* Inflation risk is the risk that the value of assets or income from investments will be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the Common Shares and distributions can decline. See Risk Factors Inflation Risk.

*Derivatives Risk, Including the Risk of Swaps.* The Fund's use of derivatives involves risks different from, and possibly greater than, the risks associated with investing directly in the investments underlying the derivatives. Whether the Fund's use of derivatives is successful will depend on, among other things, if NFALLC and Nuveen Asset Management correctly forecast market values, interest

rates and other applicable factors. If NFALLC and Nuveen Asset Management incorrectly forecast these and other factors, the investment performance of the Fund will be unfavorably affected. In addition, the derivatives market is largely unregulated. It is possible that developments in the derivatives market could adversely affect the Fund's ability to successfully use derivative instruments.

The Fund may enter into various types of derivatives transactions, including futures, options, swaps (including credit default swaps, interest rate swaps and total return swaps), among others. Like most derivative instruments, the use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. In addition, the use of derivatives requires an understanding by Nuveen Asset Management not only of the referenced asset, rate or index, but also of the derivative contract itself and the markets in which they trade. Successful implementation of most hedging strategies would generate taxable income. The derivatives market is subject to a changing regulatory environment. It is possible that regulatory or other developments in the derivatives market could adversely affect the Fund's ability to successfully use derivative instruments. As of February 29, 2016, the Fund was not invested in derivatives. See [Risk Factors Derivatives Risk](#), [Risk Factors Counterparty Risk](#), [Risk Factors Hedging Risk](#), [Risk Factors Tax Risk](#) and the SAI.

*Counterparty Risk.* Changes in the credit quality of the companies that serve as the Fund's counterparties with respect to derivatives, insured municipal securities or other transactions supported by another party's credit will affect the value of those instruments. Certain entities that have served as counterparties in the markets for these transactions have recently incurred significant financial hardships including bankruptcy and losses as a result of exposure to sub-prime mortgages and other lower quality credit investments that have experienced recent defaults or otherwise suffered extreme credit deterioration. As a result, such hardships have reduced these entities' capital and called into question their continued ability to perform their obligations under such transactions. By using such derivatives or other transactions, the Fund assumes the risk that its counterparties could experience similar financial hardships. See [Risk Factors Counterparty Risk](#).

*Hedging Risk.* The Fund's use of derivatives or other transactions to reduce risks involves costs and will be subject to Nuveen Asset Management's ability to predict correctly changes in the relationships of such hedge instruments to the Fund's portfolio holdings or other factors. No assurance can be given that Nuveen Asset Management's judgment in this respect will be correct. In addition, no assurance can be given that the Fund will enter into hedging or other transactions at

times or under circumstances in which it may be advisable to do so. See Risk Factors Hedging Risk.

See Risk Factors Recent Market Conditions Credit Crisis Liquidity and Volatility Risk and Risk Factors Municipal Securities Market Risk.

*Anti-Takeover Provisions.* The Fund's Declaration of Trust (the Declaration) and the Fund's By-Laws (the By-Laws) include provisions that could limit the ability of other entities or persons to acquire control of the Fund or convert the Fund to open-end status. These provisions could have the effect of depriving the Common Shareholders of opportunities to sell their Common Shares at a premium over the then current market price of the Common Shares. See Certain Provisions in the Declaration of Trust Anti-Takeover Provisions and Risks Anti-Takeover Provisions.

In addition, an investment in the Fund's Common Shares raises other risks, which are more fully disclosed in the Risk Factors section of this Prospectus, including: reinvestment risk, sector and industry risk, special risks relating to certain municipal obligations, market disruption risk, impact of offering methods risk, risks relating to certain affiliations; and risks that provisions in the Fund's Declaration could affect the opportunities of Common Shareholders to sell their Common Shares. See Risk Factors.

*Potential Conflicts of Interest Risk.* NFALLC Nuveen Asset Management and TIAA each provide a wide array of portfolio management and other asset management services to a mix of clients and may engage in ordinary course activities in which their respective interests or those of their clients may compete or conflict with those of the Fund. For example, NFALLC and Nuveen Asset Management may provide investment management services to other funds and accounts that follow investment objectives similar to those of the Fund. In certain circumstances, and subject to its fiduciary obligations under the Investment Advisers Act of 1940, Nuveen Asset Management may have to allocate a limited investment opportunity among its clients, which include closed-end funds, open-end funds and other commingled funds. NFALLC and Nuveen Asset Management have each adopted policies and procedures designed to address such situations and other potential conflicts of interests. For additional information about potential conflicts of interest, and the way in which NFALLC and Nuveen Asset Management address such conflicts, please see the SAI.

## Distributions

The Fund pays monthly distributions to Common Shareholders at a level rate (stated in terms of a fixed cents per Common Share dividend rate) based on the projected performance of the Fund. The Fund's ability to maintain a level Common Share dividend rate will depend on a number of factors, including dividends payable on VRDP

Shares. As portfolio and market conditions change, the rate of dividends on the Common Shares and the Fund's dividend policy could change. For each taxable year, the Fund will distribute all or substantially all of its net investment income (after it pays accrued dividends on VRDP Shares). In addition, the Fund intends to distribute, at least annually, all or substantially all of its net capital gain (which is the excess of net long-term capital gain over net short-term capital loss) and taxable ordinary income, if any, to Common Shareholders so long as the net capital gain and taxable ordinary income are not necessary to pay accrued dividends on, or redeem or liquidate, any preferred shares, including VRDP Shares, then outstanding or pay any interest and required principal payments on borrowings. You may elect to reinvest automatically some or all of your distributions in additional Common Shares under the Fund's Dividend Reinvestment Plan.

The Fund might not distribute all or a portion of any net capital gain for a taxable year. If the Fund does not distribute all of its net capital gain for a taxable year, it will pay federal income tax on the retained gain. Each Common Shareholder of record as of the end of the Fund's taxable year will include in income for federal income tax purposes, as long-term capital gain, his or her share of the retained gain, will be deemed to have paid his or her proportionate share of tax paid by the Fund on such retained gain, and will be entitled to an income tax credit or refund for that share of the tax. The Fund will treat the retained capital gain amount as a substitute for equivalent cash distributions. See [Distributions](#) and [Dividend Reinvestment Plan](#).

The Fund reserves the right to change its distribution policy and the basis for establishing the rate of its monthly distributions at any time.

**Custodian and Transfer Agent**

State Street Bank and Trust Company serves as custodian and transfer agent of the Fund's assets. See [Custodian and Transfer Agent](#).

**Special Tax Considerations**

The Fund has not established any limit on the percentage of its portfolio that may be invested in municipal bonds subject to the alternative minimum tax provisions of federal tax law, and the Fund expects that a substantial portion of the income it produces will be includable in alternative minimum taxable income. If you are, or as a result of investment in the Fund would become, subject to the federal alternative minimum tax, the Fund may not be a suitable investment for you. In addition, distributions of ordinary taxable income (including any net short-term capital gain) will be taxable to shareholders as ordinary income (and not eligible for favorable taxation as [qualified dividend income](#)), and capital gain dividends will be taxable as long-term capital gains. See [Tax Matters](#).

**Voting Rights**

The holders of the Fund's VRDP Shares, voting as a separate class, would have the right to elect at least two Trustees at all times and to elect a majority of the Trustees in the event two full years' dividends on the preferred shares, including VRDP Shares, are unpaid. In each case, the remaining Trustees will be elected by holders of shares of Common Shares and preferred shares, including VRDP Shares, voting together as a single class. The holders of preferred shares, including VRDP Shares, will vote as a separate class or classes on certain other matters as required under the Declaration, the Investment Company Act of 1940, as amended (the "1940 Act") and Massachusetts law. See "Description of Shares - VRDP Shares - Voting Rights" and "Certain Provisions in the Declaration of Trust."

---

**SUMMARY OF FUND EXPENSES**

The table shows the expenses of the Fund as a percentage of the average net assets applicable to Common Shares, and not as a percentage of total assets or Managed Assets. The purpose of the table below and the Examples below are to help you understand all fees and expenses that you, as a Common Shareholder, would bear directly or indirectly.

<b>Shareholder Transaction Expenses</b> (as a percentage of offering price)	
Maximum Sales Charge	4.00%
	<b>As a Percentage of Net Assets Attributable to Common Shares(1)</b>
<hr/>	
<b>Annual Expenses</b>	
Management Fees (2)	0.87%
Fees on VRDP Shares and Interest and Related Expenses from Inverse Floaters (3)	0.48%
Other Expenses (4)	0.07%
	<hr/>
<b>Total Annual Expenses</b>	<b>1.42%</b>
	<hr/>

- 
- (1) Stated as percentages of average net assets attributable to Common Shares for the fiscal year ended February 29, 2016.
  - (2) The Management Fees shown in the fee table are higher than the contractual management fee rates because the Management Fees in the table are calculated as a percentage of the Fund's average net assets applicable to Common Shares, rather than the Fund's Managed Assets. Managed Assets includes assets attributable to leverage. The management fee consists of a fund-level fee and complex-level fee. For the fiscal year ended February 29, 2016, the Fund-level fee was 0.4035% of Managed Assets or 0.6159% of Net Assets Attributable to Common Shares and the complex-level fee was 0.1643% of Managed Assets or 0.2509% of Net Assets Attributable to Common Shares. See Management of the Fund Investment Management and Sub-Advisory Agreements for a complete discussion of how the Management Fee is calculated.
  - (3) Currently, the Fund employs leverage through its investment in VRDP Shares and through certain of its investments in inverse floating rate securities. For the fiscal year ended February 29, 2016, the Fund's effective leverage was approximately 34% of the Fund's Managed Assets. Fees on VRDP Shares assumes annual liquidity and remarketing fees, as well as the amortization of offering costs. Interest and Related Expenses from Inverse Floaters include interest expense attributable to inverse floating rate securities created by selling a fixed-rate bond to a broker dealer for deposit into the special purpose trust and receiving in turn the residual interest in the trust ( self-deposited inverse floating rate securities ). To the extent each Fund creates self-deposited inverse floating rate securities, the Fund recognizes interest expense because accounting rules require the Fund to treat interest paid by such trusts as having been paid (indirectly) by the Fund. Because the Fund also recognizes a corresponding amount of additional interest earned (also indirectly), the Fund's net asset value per share, net investment income and total return are not affected by this accounting treatment. The actual fees on VRDP Shares and interest and related expenses from inverse floaters incurred in the future may be higher or lower. The Funds' use of leverage will increase the amount of management fees paid to NFALLC and Nuveen Asset Management.
  - (4) Other Expenses are estimated based on actual expenses from the prior fiscal year.

The purpose of the table above is to help you understand all fees and expenses that you, as a Common Shareholder, would bear directly or indirectly. See Management of the Fund Investment Adviser.

**Examples**

The following examples illustrate the expenses that a shareholder would pay on a \$1,000 investment that is held for the time periods provided in the table. Each example assumes that all dividends and other distributions are reinvested in the Fund and that the Fund's Annual Expenses, as provided above, remain the same. The examples also assume a 5% annual return.(1)

**Example # 1 (At-the-Market Transaction)**

The following example assumes a transaction fee of 1.00%, as a percentage of the offering price.

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$ 24	\$ 54	\$ 87	\$ 178

**Example # 2 (Underwriting Syndicate Transaction)**

The following example assumes a transaction fee of 4.00%, as a percentage of the offering price.

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$ 54	\$ 83	\$ 115	\$ 203

**Example # 3 (Privately Negotiated Transaction)**

The following example assumes there is no transaction fee.

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$ 14	\$ 45	\$ 78	\$ 170

**The examples should not be considered a representation of future expenses. Actual expenses may be greater or less than those shown above.**

(1) The examples assume that all dividends and distributions are reinvested at Common Shares net asset value. Actual expenses may be greater or less than those assumed. Moreover, the Fund's actual rate of return may be greater or less than the hypothetical 5% return shown in the example.

## FINANCIAL HIGHLIGHTS

The following Financial Highlights table is intended to help a prospective investor understand the Fund's financial performance for the periods shown. Certain information reflects financial results for a single Common share of the Fund. The total returns in the table represent the rate an investor would have earned or lost on an investment in Common shares of the Fund (assuming reinvestment of all dividends). The Fund's annual financial statements as of and for the fiscal years ended February 29, 2016 and February 28, 2015, including the financial highlights for the fiscal years then ended, have been audited by KPMG LLP, independent registered public accounting firm. KPMG has not reviewed or examined any records, transactions or events after the date of such reports. The information with respect to the fiscal years ended prior to February 28, 2015 has been audited by Ernst & Young LLP, an independent registered public accounting firm. A copy of the Annual Report may be obtained from [www.sec.gov](http://www.sec.gov) or by visiting [www.nuveen.com](http://www.nuveen.com). The information contained in, or that can be accessed through, the Fund's website is not part of this Prospectus. Past results are not indicative of future performance.

The following per share data and ratios have been derived from information provided in the financial statements.

Selected data for a Common Share outstanding throughout each period:

	Year Ended February 28/29				
	2016	2015	2014	2013	2012

- (a) The amounts shown for ARPS are based on Common Share equivalents.
- (b) Total Return Based on Common Share NAV is the combination of changes in common share NAV, reinvested dividend income at NAV and reinvested capital gains distributions at NAV, if any. The last dividend declared in the period, which is typically paid on the first business day of the following month, is assumed to be reinvested at the ending NAV. The actual reinvest price for the last dividend declared in the period may often be based on the Fund's market price (and not its NAV), and therefore may be different from the price used in the calculation. Total returns are not annualized.  
 Total Return Based on Common Share Price is the combination of changes in the market price per share and the effect of reinvested dividend income and reinvested capital gains distributions, if any, at the average price paid per share at the time of reinvestment. The last dividend declared in the period, which is typically paid on the first business day of the following month, is assumed to be reinvested at the ending market price. The actual reinvestment for the last dividend declared in the period may take place over several days, and in some instances may not be based on the market price, so the actual reinvestment price may be different from the price used in the calculation. Total returns are not annualized.
- (c) Ratios do not reflect the effect of dividend payments to ARPS shareholders, during periods when ARPS were outstanding; Net Investment Income (Loss) ratios reflect income earned and expenses incurred on assets attributable to ARPS, and other subsequent forms of preferred shares issued by the Fund, where applicable.
- (d) After expense reimbursement from the Adviser, where applicable. As of July 31, 2009 the Adviser is no longer contractually reimbursing the Fund for any fees or expenses.
- (e) The expense ratios reflect, among other things, all interest expense and other costs related to Preferred Shares and/or the interest expense deemed to have been paid by the Fund on the floating rate certificates issued by the special purpose trusts for the self-deposited inverse floaters held by the Fund where applicable, as follows:

<b>Year Ended 2/28-2/29</b>	
2016	0.48%
2015	0.50
2014	0.61
2013	0.61
2012	0.46
2011	0.06
2010	0.08
2009 (f)	0.14*
<b>Year Ended 8/31</b>	
2008	0.11
2007	0.05
2006	

- (f) For the six months ended February 28, 2009.
- (g) Portfolio Turnover Rate is calculated based on the lesser of long-term purchases or sales divided by the average long-term market value during the period.
- (h) During the fiscal year ended February 28, 2015, NFALLC voluntarily reimbursed the Fund for certain expenses incurred in connection with a equity shelf program. As a result, the Expenses and Net Investment Income (Loss) Ratios to Average Net Assets reflect this voluntary expense reimbursement from NFALLC. The Expenses and Net Investment Income (Loss) Ratios to Average Net Assets excluding this expense reimbursement from NFALLC are 1.53% and 5.95%, respectively.
- \* Annualized.
- N/A. The Fund no longer has a contractual reimbursement agreement with the Adviser.

---

**TRADING AND NET ASSET VALUE INFORMATION**

The following table shows for the periods indicated: (i) the high and low sales prices for Common Shares reported as of the end of the day on the NYSE, (ii) the high and low net asset values of the Common Shares, and (iii) the high and low of the premium/(discount) to net asset value (expressed as a percentage) of the Common Shares.

<u>Fiscal Quarter Ended</u>	<u>Market Price</u>		<u>Net Asset Value</u>		<u>Premium/(Discount)</u>

The net asset value per share, the market price and percentage of premium/(discount) to net asset value per share of the Fund's Common Stock on May 2, 2016 was \$16.33, \$16.27 and (0.37)%, respectively. As of March 31, 2016, the Fund had 107,383,777 Common Shares outstanding 6,996 VRDP Shares and net assets applicable to Common Shares of \$1,738,415,612. See Repurchase of Fund Shares; Conversion to Open-End Fund.

**THE FUND**

The Fund is a diversified, closed-end management investment company registered under the 1940 Act. The Fund was organized as a Massachusetts business trust on December 1, 1998, pursuant to the Declaration and governed by the laws of the Commonwealth of Massachusetts. The Fund issues Common Shares and preferred shares. The Fund's Common Shares are listed on the NYSE under the symbol NAC. The Fund has previously offered MuniPreferred Shares, a type of preferred stock. As of February 28, 2011, all of the Fund's MuniPreferred Shares have been redeemed. The Fund has also issued variable rate demand preferred shares, another type of preferred shares, referred to herein as VRDP Shares.

The Fund's principal office is located at 333 West Wacker Drive, Chicago, Illinois 60606, and its telephone number is (800) 257-8787.

The following provides information about the Fund's outstanding shares as of March 31, 2016:

## USE OF PROCEEDS

The net proceeds from the issuance of Common Shares hereunder will be used by the Fund to invest in municipal securities in accordance with the Fund's investment objectives and policies as stated below. To the extent the Fund uses the net proceeds of any offering to invest in municipal securities, it is presently anticipated that the Fund will be able to invest substantially all of such proceeds in securities that meet the Fund's investment objectives and policies within one month from the date on which the proceeds from an offering are received by the Fund. Pending such investment, it is anticipated that the proceeds will be invested in short-term or long-term securities issued by the U.S. Government and its agencies or instrumentalities or in high-quality, short-term money market instruments. See Risk Factors Leverage Risk and Use of Leverage.

## THE FUND'S INVESTMENTS

### Investment Objectives

The Fund's investment objectives are:

to provide current income exempt from regular federal and California income taxes; and

to enhance portfolio value relative to the California municipal bond market by investing in tax-exempt California municipal securities that Nuveen Asset Management believes are underrated or undervalued or that represent municipal market sectors that are undervalued.

Underrated municipal securities are those whose ratings do not, in Nuveen Asset Management's opinion, reflect their true value. Municipal securities may be underrated because of the time that has elapsed since their rating was assigned or reviewed, or because of positive factors that may not have been fully taken into account by rating agencies, or for other similar reasons. Municipal securities that are undervalued or that represent undervalued municipal market sectors are municipal securities that, in Nuveen Asset Management's opinion, are worth more than the value assigned to them in the marketplace. Municipal securities of particular types or purposes (*e.g.*, hospital bonds, industrial revenue bonds or bonds issued by a particular municipal issuer) may be undervalued because there is a temporary excess of supply in that market sector, or because of a general decline in the market price of municipal securities of the market sector for reasons that do not apply to the particular municipal securities that are considered undervalued. The Fund's investment in underrated or undervalued California municipal securities will be based on Nuveen Asset Management's belief that the prices of such municipal securities should ultimately reflect their true value. Accordingly, enhancement of portfolio value relative to the municipal bond market refers to the Fund's objective of attempting to realize above-average capital appreciation in a rising market, and to experience less than average capital losses in a declining market. Thus, the Fund's secondary investment objective is not intended to suggest that capital appreciation is itself an objective of the Fund. Instead, the Fund seeks enhancement of portfolio value relative to the California municipal bond market by prudent selection of California municipal securities, regardless of which direction the market may move. Any capital appreciation realized by the Fund will generally result in the distribution of taxable capital gains to Common Shareholders. There can be no assurance that the Fund will achieve its investment objectives. See The Fund's Investments Investment Policies.

Any capital appreciation realized by the Fund will generally result in the distribution of taxable capital gains to Common Shareholders and VRDP shareholders. The Fund has not established any limit on the percentage of its portfolio that may be invested in municipal bonds subject to the alternative minimum tax provisions of federal tax law, and the Fund expects that a substantial portion of the income it produces will be includable in alternative minimum taxable income.

It is a fundamental policy that, under normal circumstances, the Fund invests at least 80% of its Managed Assets in municipal securities and other related investments, the income from which is exempt from regular federal and California income tax.

As a non-fundamental policy, under normal circumstances, the Fund invests at least 80% of its Managed Assets in investment grade securities that, at the time of investment are rated within the four highest grades (Baa or BBB or better) by at least one NRSRO that rate such security or are unrated but judged to be of comparable quality by Nuveen Asset Management. Also, as a non-fundamental policy, the Fund may invest up to 20% of its Managed Assets in municipal securities that at the time of investment are rated below investment grade or are unrated but judged to be of comparable quality by Nuveen Asset Management. Additionally, as a non-fundamental policy, no more than 10% of the Fund's Managed Assets may be invested in municipal securities rated below B3/B- or that are unrated but judged to be of comparable quality by Nuveen Asset Management. There can be no assurance that the Fund will achieve its investment objectives. See The Fund's Investments Investment Policies.

## **Investment Philosophy**

Nuveen Asset Management believes that the unique tax treatment of municipal securities and the structural characteristics in the municipal securities market create attractive opportunities to enhance the after-tax total return and diversification of the investment portfolios of taxable investors. Nuveen Asset Management believes that these unique characteristics also present unique risks that may be managed to realize the benefits of the asset class.

*After-Tax Income Potential.* The primary source of total return from municipal securities comes from the tax-exempt income derived therefrom. Nuveen Asset Management believes that, at acceptable levels of credit risk and maturity principal risk, the municipal securities market offers the potential for higher after-tax income when compared with other fixed income markets.

*Managing Multi-Faceted Risks.* Risk in the municipal securities market is derived from multiple sources, including credit risk at the issuer and sector levels, structural risks such as call risk, yield curve risk, and legislative and tax-related risks. Nuveen Asset Management believes that managing these risks at both the individual security and Fund portfolio levels is an important element of realizing the after-tax income and total return potential of the asset class.

*Market Inefficiencies.* Nuveen Asset Management believes that the scale and intricacy of the municipal securities market often results in pricing anomalies and other inefficiencies that can be identified and capitalized on through trading strategies.

## **Investment Process**

Nuveen Asset Management believes that a bottom-up, value-oriented investment strategy that seeks to identify underrated and undervalued securities and sectors is positioned to capture the opportunities inherent in the municipal securities market and potentially outperform the general municipal securities market over time. The primary elements of Nuveen Asset Management's investment process are:

*Credit Analysis and Surveillance.* Nuveen Asset Management focuses on bottom-up, fundamental analysis of municipal securities issuers. Analysts screen each sector for issuers that meet the fundamental tests of creditworthiness and favor those securities with demonstrable growth potential, solid coverage of debt service and a priority lien on hard assets, dedicated revenue streams or tax resources. As part of Nuveen Asset Management's overall risk management process, analysts actively monitor the credit quality of portfolio holdings.

*Sector Analysis.* Organized by sector, analysts continually assess the key issues and trends affecting each sector in order to maintain a sector outlook. Evaluating such factors as historical default rates and average credit spreads within each sector, analysts provide top-down analysis that

supports decisions to overweight or underweight a given sector in a portfolio.

*Diversification.* Nuveen Asset Management seeks to invest in a large number of sectors and specific issuers in order to help insulate a portfolio from events that affect any individual industry or credit.

*Trading Strategies.* Through its trading strategies, Nuveen Asset Management seeks to enhance portfolio value by trading to take advantage of inefficiencies found in the municipal market. This may entail selling issues Nuveen Asset Management deems to be overvalued and purchasing issues Nuveen Asset Management considers to be undervalued.

*Sell Discipline.* Nuveen Asset Management generally sells securities when it (i) determines a security has become overvalued or over-rated, (ii) identifies credit deterioration, or (iii) modifies a portfolio strategy, such as sector allocation. Nuveen Asset Management may also sell securities when such securities exceed the portfolio's diversification targets.

### **Investment Policies**

Under normal circumstances, the Fund invests its Managed Assets in a portfolio of municipal securities that pay interest that is exempt from regular and California federal income tax. It is a fundamental policy that, under normal circumstances, the Fund invest at least 80% of its Managed Assets in municipal securities and other related investments, the income from which is exempt from regular federal and California income tax. The Fund has not established any limit on the percentage of its portfolio that may be invested in municipal bonds subject to the alternative minimum tax provisions of federal tax law, and the Fund expects that a substantial portion of the income it produces will be includable in alternative minimum taxable income. For a discussion of how the federal alternative minimum tax may affect shareholders, see Tax Matters.

As a non-fundamental policy, under normal circumstances, the Fund invests at least 80% of its Managed Assets in municipal securities that, at the time of investment, are investment grade quality. Also, as a non-fundamental policy, the Fund may invest up to 20% of its Managed Assets in municipal securities that at the time of investment are rated below investment grade or are unrated but judged to be of comparable quality by Nuveen Asset Management. Additionally, as a non-fundamental policy, no more than 10% of the Fund's Managed Assets may be invested in municipal securities rated below B3/B- or that are unrated but judged to be of comparable quality by Nuveen Asset Management. The Fund may invest up to approximately 15% of its Managed Assets in inverse floating rate securities (discussed below). The economic effect of leverage through the Fund's purchase of inverse floating rate securities creates an opportunity for increased net income and returns, but also creates the possibility that the Fund's long-term returns will be diminished if the cost of leverage exceeds the return on the inverse floating rate securities purchased by the Fund. The Fund's policy of investing under normal market circumstances at least 80% of its Managed Assets in municipal securities that, at the time of investment, are investment grade quality is not considered to be fundamental by the Fund and can be changed without shareholder approval. However, this policy may only be changed by the Fund's Board of Trustees following the provision of 60 days prior notice to Common Shareholders.

Securities of below investment grade quality are commonly referred to as junk bonds. Issuers of securities rated Ba/BB or B are regarded as having current capacity to make principal and interest payments but are subject to business, financial or economic conditions which could adversely affect such payment capacity. Municipal securities rated Baa or BBB are considered investment grade securities; municipal securities rated Baa are considered medium grade obligations which lack outstanding investment characteristics and have speculative characteristics, while municipal securities rated BBB are regarded as having adequate capacity to pay principal and interest. Municipal securities rated AAA in which the Fund may invest may have been so rated on the basis of the existence of insurance guaranteeing the timely payment, when due, of all principal and interest. Municipal securities rated below investment grade quality are obligations of issuers that are considered predominately speculative with respect to the issuer's capacity to pay interest and repay principal according to the terms of the obligation and, therefore, carry greater investment risk, including the possibility of issuer default and bankruptcy and increased market price volatility. Municipal securities rated below investment grade tend to be less

marketable than higher-quality securities because the market for them is less broad. The market for unrated municipal securities is even narrower. During periods of thin trading in these markets, the spread between bid and asked prices is likely to increase significantly and the Fund may have greater difficulty selling its portfolio securities. The Fund will be more dependent on Nuveen Asset Management's research and analysis when investing in these securities.

The ratings of S&P, Moody's and Fitch represent their opinions as to the quality of the municipal securities they rate. It should be emphasized, however, that ratings are general and are not absolute standards of quality. Consequently, municipal securities with the same maturity, coupon and rating may have different yields while obligations of the same maturity and coupon with different ratings may have the same yield.

The foregoing credit quality policies apply only at the time a security is purchased, and the Fund is not required to dispose of a security in the event that an NRSRO downgrades its assessment of the credit characteristics of a particular issuer or that valuation changes of various bonds cause the Fund's portfolio to fail to satisfy those policies. In determining whether to retain or sell such a security, Nuveen Asset Management may consider such factors as Nuveen Asset Management's assessment of the credit quality of the issuer of such security, the price at which such security could be sold and the rating, if any, assigned to such security by other rating agencies. See [Municipal Securities](#) below. The Fund may also invest in securities of other open- or closed-end investment companies (up to 10% of its Managed Assets) that invest primarily in municipal bonds of the types in which the Fund may invest directly. See [Other Investment Companies](#) below.

As of March 31, 2016, the effective maturity of the Fund's portfolio was 20.84 years. The Fund will generally invest in municipal securities with a weighted average maturity of at least 15 years, but it may be lengthened or shortened depending on market conditions and on an assessment by the Fund's portfolio manager of which segments of the municipal securities market offer the most favorable relative investment values and opportunities for tax-exempt income and total return. Moreover, during temporary defensive periods (*e.g.*, times when, in NFALLC opinion, temporary imbalances of supply and demand or other temporary dislocations in the tax-exempt bond market adversely affect the price at which long-term or intermediate-term municipal securities are available), and in order to keep the Fund's cash fully invested, the Fund may invest any percentage of its net assets in short-term investments including high quality, short-term debt securities that may be either tax-exempt or taxable (or in securities of other open- or closed-end investment companies that invest primarily in municipal securities of the types in which the Fund may invest directly). The Fund may not achieve its investment objectives during such period. Investment in taxable short-term investments would result in a portion of your dividends being subject to regular federal or California income tax, and if the proportion of taxable investments exceeded 50% of the Fund's total assets as of the close of any quarter of the Fund's taxable year, the Fund would not satisfy the general eligibility test that would permit it to pay exempt-interest dividends for that taxable year. Such transactions will be used solely to reduce risk.

The Fund may purchase municipal securities that are additionally secured by insurance, bank credit agreements, or escrow accounts. The credit quality of companies which provide such credit enhancements may affect the value of those securities. Although the insurance feature may reduce certain financial risks, the premiums for insurance and the higher market price paid for insured obligations may reduce the Fund's income. The insurance feature does not guarantee the market value of the insured obligations, and the effectiveness and value of the insurance itself is dependent on the continued creditworthiness of the insurer.

Obligations of issuers of municipal securities are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of creditors, such as the Bankruptcy Reform Act of 1978. In addition, the obligations of such issuers may become subject to the laws enacted in the future by Congress, state legislatures or referenda extending the time for payment of principal or interest, or both, or imposing other constraints upon enforcement of such obligations or upon municipalities to levy taxes. There is also the possibility that, as a result of legislation or other conditions, the power or ability of any issuer to pay, when due, the principal of and interest on its municipal securities may be materially affected.

The Fund cannot change its investment objectives without the approval of the holders of a majority of the outstanding Common Shares and VRDP Shares, voting together as a single class, and of the holders of a majority of the outstanding VRDP Shares, voting as a separate class. When used with respect to particular shares of the Fund, a majority of the outstanding shares under the 1940 Act, means (i) 67% or more of the shares present at a meeting, if the holders of more than 50% of the shares are present or represented by proxy, or (ii) more than 50% of the shares, whichever is less. See Description of VRDP Shares Voting Rights for additional information with respect to the voting rights of Fund shareholders.

As of February 29, 2016, approximately 88% of the Fund's total investment exposure was invested in municipal securities rated investment grade by an NRSRO (including S&P, Moody's or Fitch). The relative percentages of the value of the investments attributable to investment grade municipal securities and to below investment grade municipal securities could change over time as a result of rebalancing the Fund's assets by Nuveen Asset Management, market value fluctuations, issuance of additional shares and other events.

During temporary defensive periods or in order to keep the Fund's cash fully invested, including during the period when the net proceeds of the offering of Common Shares are being invested, the Fund may deviate from its investment policies and objectives. During such periods, the Fund may invest up to 100% of its net assets in short-term investments, including high quality, short-term securities that may be either tax-exempt or taxable. The Fund intends to invest in taxable short-term investments only in the event that suitable tax-exempt short-term investments are not available at reasonable prices and yields. Investment in taxable short-term investments would result in a portion of your dividends being subject to regular federal income tax, and if the proportion of taxable investments exceeded 50% of the Fund's total assets as of the close of any quarter of any Fund taxable year, the Fund would not for that taxable year satisfy the general eligibility test that would otherwise permit it to pay exempt-interest dividends. Such transactions will be used solely to reduce risk. There can be no assurance that such strategies will be successful. For more information, see the SAI under Tax Matters.

The Fund is diversified for purposes of the 1940 Act. Consequently, as to 75% of its assets, the Fund may not invest more than 5% of its total assets in the securities of any single issuer.

## **Municipal Securities**

*General.* The Fund may invest in various municipal securities, including municipal bonds and notes, other securities issued to finance and refinance public projects, and other related securities and derivative instruments creating exposure to municipal bonds, notes and securities that provide for the payment of interest income that is exempt from regular federal income tax. Municipal securities are often issued by state and local governmental entities to finance or refinance public projects such as roads, schools, and water supply systems. Municipal securities may also be issued on behalf of private entities or for private activities, such as housing, medical and educational facility construction, or for privately owned transportation, electric utility and pollution control projects. Municipal securities may be issued on a long-term basis to provide permanent financing. The repayment of such debt may be secured generally by a pledge of the full faith and credit taxing power of the issuer, a limited or special tax, or any other revenue source, including project revenues, which may include tolls, fees and other user charges, lease payments and mortgage payments. Municipal securities may also be issued to finance projects on a short-term interim basis, anticipating repayment with the proceeds of the later issuance of long-term debt. The Fund may purchase municipal securities in the form of bonds, notes, leases or certificates of participation; structured as callable or non-callable; with payment forms including fixed coupon, variable rate, zero coupon, capital appreciation bonds, tender option bonds, and residual interest bonds or inverse floating rate securities; or acquired through investments in pooled vehicles, partnerships or other investment companies. Inverse floating rate securities are securities that pay interest at rates that vary inversely with changes in prevailing short-term tax-exempt interest rates and represent a leveraged investment in an underlying municipal security, which could have the economic effect of financial leverage.

Municipal securities are either general obligation or revenue bonds and typically are issued to finance public projects (such as roads or public buildings), to pay general operating expenses, or to refinance outstanding debt.

Municipal securities may also be issued on behalf of private entities or for private activities, such as housing, medical and educational facility construction, or for privately owned industrial development and pollution control projects. General obligation bonds are backed by the full faith and credit, or taxing authority, of the issuer and may be repaid from any revenue source; revenue bonds may be repaid only from the revenues of a specific facility or source. The Fund may also purchase municipal securities that represent lease obligations, municipal notes, pre-refunded municipal securities, private activity bonds, tender option bonds and other related securities and derivative instruments that create exposure to municipal bonds, notes and securities and that provide for the payment of interest income that is exempt from regular federal and California income tax.

The municipal securities in which the Fund invests are generally issued by the State of California, a municipality of California, or a political subdivision of either, and pay interest that, in the opinion of bond counsel to the issuer (or on the basis of other authority believed by Nuveen Asset Management to be reliable), is exempt from regular federal and California income taxes, although the interest may be subject to the federal alternative minimum tax. The Fund may invest in municipal securities issued by U.S. territories (such as Puerto Rico or Guam) that are exempt from regular federal and California income taxes.

The yields on municipal securities depend on a variety of factors, including prevailing interest rates and the condition of the general money market and the municipal bond market, the size of a particular offering, the maturity of the obligation and the rating of the issue. The market value of municipal securities will vary with changes in interest rate levels and as a result of changing evaluations of the ability of their issuers to meet interest and principal payments.

A municipal security's market value generally will depend upon its form, maturity, call features, and interest rate, as well as the credit quality of the issuer, all such factors examined in the context of the municipal securities market and interest rate levels and trends.

*Maturity and Duration.* The Fund will generally invest in California municipal securities with intermediate or long-term maturities. The average effective maturity of securities held by the Fund may be shortened or lengthened, depending on market conditions and on an assessment by the Fund's portfolio manager of which segments of the municipal securities market offer the most favorable relative investment values and opportunities for tax-exempt income and total return. As of March 31, 2016, the effective maturity of the Fund's portfolio was 20.84 years. In comparison to maturity (which is the date on which a debt instrument ceases and the issuer is obligated to repay the principal amount), duration is a measure of the price volatility of a debt instrument as a result of changes in market rates of interest, based on the weighted average timing of the instrument's expected principal and interest payments. Duration differs from maturity in that it considers a security's yield, coupon payments, principal payments and call features in addition to the amount of time until the security finally matures. As the value of a security changes over time, so will its duration. Prices of securities with longer durations tend to be more sensitive to interest rate changes than securities with shorter durations. In general, a portfolio of securities with a longer duration can be expected to be more sensitive to interest rate changes than a portfolio with a shorter duration. For example, the price of a bond with an effective duration of two years will rise (fall) two percent for every one percent decrease (increase) in its yield, and the price of a five-year duration bond will rise (fall) five percent for a one percent decrease (increase) in its yield. As of March 31, 2016, the average effective duration of the Fund's portfolio was 8.43 years, which includes the effects of leverage and takes into account the effect of option call provisions of the municipal securities in the Fund's portfolio.

*Municipal Leases and Certificates of Participation.* The Fund also may purchase municipal securities that represent lease obligations and certificates of participation in such leases. These carry special risks because the issuer of the securities may not be obligated to appropriate money annually to make payments under the lease. A municipal lease is an obligation in the form of a lease or installment purchase which is issued by a state or local government to acquire equipment and facilities. Income from such obligations is generally exempt from state and local taxes in the state of issuance. Leases and installment purchase or conditional sale contracts (which normally provide for title to the leased asset to pass eventually to the governmental issuer) have evolved as a means for

governmental issuers to acquire property and equipment without meeting the constitutional and statutory requirements for the issuance of debt. The debt issuance limitations are deemed to be inapplicable because of the inclusion in many leases or contracts of non-appropriation clauses that relieve the governmental issuer of any obligation to make future payments under the lease or contract unless money is appropriated for such purpose by the appropriate legislative body on a yearly or other periodic basis. In addition, such leases or contracts may be subject to the temporary abatement of payments in the event the issuer is prevented from maintaining occupancy of the leased premises or utilizing the leased equipment or facilities. Although the obligations may be secured by the leased equipment or facilities, the disposition of the property in the event of non-appropriation or foreclosure might prove difficult, time consuming and costly, and result in a delay in recovering, or the failure to recover fully, the Fund's original investment. To the extent that the Fund invests in unrated municipal leases or participates in such leases, the credit quality rating and risk of cancellation of such unrated leases will be monitored on an ongoing basis. In order to reduce this risk, the Fund will only purchase municipal securities representing lease obligations where Nuveen Asset Management believes the issuer has a strong incentive to continue making appropriations until maturity.

A certificate of participation represents an undivided interest in an unmanaged pool of municipal leases, an installment purchase agreement or other instruments. The certificates are typically issued by a municipal agency, a trust or other entity that has received an assignment of the payments to be made by the state or political subdivision under such leases or installment purchase agreements. Such certificates provide the Fund with the right to a pro rata undivided interest in the underlying municipal securities. In addition, such participations generally provide the Fund with the right to demand payment, on not more than seven days' notice, of all or any part of the Fund's participation interest in the underlying municipal securities, plus accrued interest.

*Municipal Notes.* Municipal securities in the form of notes generally are used to provide for short-term capital needs, in anticipation of an issuer's receipt of other revenues or financing, and typically have maturities of up to three years. Such instruments may include tax anticipation notes, revenue anticipation notes, bond anticipation notes, tax and revenue anticipation notes and construction loan notes. Tax anticipation notes are issued to finance the working capital needs of governments. Generally, they are issued in anticipation of various tax revenues, such as income, sales, property, use and business taxes, and are payable from these specific future taxes. Revenue anticipation notes are issued in expectation of receipt of other kinds of revenue, such as federal revenues available under federal revenue sharing programs. Bond anticipation notes are issued to provide interim financing until long-term bond financing can be arranged. In most cases, the long-term bonds then provide the funds needed for repayment of the bond anticipation notes. Tax and revenue anticipation notes combine the funding sources of both tax anticipation notes and revenue anticipation notes. Construction loan notes are sold to provide construction financing. Mortgage notes insured by the Federal Housing Authority secure these notes; however, the proceeds from the insurance may be less than the economic equivalent of the payment of principal and interest on the mortgage note if there has been a default. The anticipated revenues from taxes, grants or bond financing generally secure the obligations of an issuer of municipal notes. An investment in such instruments, however, presents a risk that the anticipated revenues will not be received or that such revenues will be insufficient to satisfy the issuer's payment obligations under the notes or that refinancing will be otherwise unavailable.

*Pre-Refunded Municipal Securities.* The principal of and interest on pre-refunded municipal securities are no longer paid from the original revenue source for the securities. Instead, the source of such payments is typically an escrow fund consisting of U.S. government securities. The assets in the escrow fund are derived from the proceeds of refunding bonds issued by the same issuer as the pre-refunded municipal securities. Issuers of municipal securities use this advance refunding technique to obtain more favorable terms with respect to securities that are not yet subject to call or redemption by the issuer. For example, advance refunding enables an issuer to refinance debt at lower market interest rates, restructure debt to improve cash flow or eliminate restrictive covenants in the indenture or other governing instrument for the pre-refunded municipal securities. However, except for a change in the revenue source from which principal and interest payments are made, the pre-refunded municipal securities remain outstanding on their original terms until they mature or are redeemed by the issuer.

*Private Activity Bonds.* Private activity bonds, formerly referred to as industrial development bonds, are issued by or on behalf of public authorities to obtain funds to provide privately operated housing facilities, airport, mass transit or port facilities, sewage disposal, solid waste disposal or hazardous waste treatment or disposal facilities and certain local facilities for water supply, gas or electricity. Other types of private activity bonds, the proceeds of which are used for the construction, equipment, repair or improvement of privately operated industrial or commercial facilities, may constitute municipal securities, although the current federal tax laws place substantial limitations on the size of such issues. The Fund's distributions of its interest income from private activity bonds may subject certain investors to the federal alternative minimum tax.

*Inverse Floating Rate Securities.* The Fund may invest up to approximately 15% of its Managed Assets in inverse floating rate securities. Inverse floating rate securities (sometimes referred to as inverse floaters or residual interests of a tender option bond) are securities whose interest rates bear an inverse relationship to the interest rate on another security or the value of an index. Generally, inverse floating rate securities represent beneficial interests in a special purpose trust formed by a third party sponsor for the purpose of holding municipal bonds. The special purpose trust typically sells two classes of beneficial interests or securities: short-term floating rate municipal securities (sometimes referred to as short-term floaters or tender option bonds), which are sold to third party investors, and inverse floating rate municipal securities, which the Fund would purchase. The short-term floating rate securities have first priority on the cash flow from the municipal bonds held by the special purpose trust. Typically, a third party, such as a bank, broker-dealer or other financial institution, grants the floating rate security holders the option, at periodic intervals, to tender their securities to the institution and receive the face value thereof. As consideration for providing the option, the financial institution receives periodic fees. The holder of the short-term floater effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. However, an institution will not be obligated to accept tendered short-term floaters in the event of certain defaults or a significant downgrade in the credit rating assigned to the bond issuer. For its inverse floating rate investment, the Fund receives the residual cash flow from the special purpose trust. Because the holder of the short-term floater is generally assured liquidity at the face value of the security, the Fund as the holder of the inverse floater assumes the interest rate cash flow risk and the market value risk associated with the municipal security deposited into the special purpose trust. The volatility of the interest cash flow and the residual market value will vary with the degree to which the trust is leveraged. This is expressed in the ratio of the face value of the short-term floaters in relation to the residual inverse floaters that are issued by the special purpose trust. The higher the percentage of the special purpose trust's total value represented by the short-term floaters, the greater the effective leverage. For example, if municipal bonds worth \$100 are deposited in a special purpose trust and the trust issues short-term floaters worth \$75 and inverse floaters worth \$25, the trust will have a leverage ratio of 3:1 and the inverse floaters will exhibit price movements at a rate that is four times that of the underlying bonds deposited into the trust. If that same trust were to issue only \$50 of floaters, the leverage ratio would be 1:1 and the inverse floaters would exhibit price movements at a rate that is only two times that of the underlying bonds. The Fund expects to make limited investments in inverse floaters, with leverage ratios that may vary between one and three times. In addition, all voting rights and decisions to be made with respect to any other rights relating to the municipal bonds held in the special purpose trust are passed through to the Fund, as the holder of the residual inverse floating rate securities.

Because increases in the interest rate on the short-term floaters reduce the residual interest paid on inverse floaters, and because fluctuations in the value of the municipal bond deposited in the special purpose trust affect the value of the inverse floater only, and not the value of the short-term floater issued by the trust, inverse floaters' value are more volatile than that of fixed rate bonds. The market price of inverse floating rate securities is generally more volatile than the underlying bonds due to the leveraging effect of this ownership structure. These securities generally will underperform the market of fixed rate bonds in a rising interest rate environment (*i.e.*, when bond values are falling), but tend to out-perform the market of fixed rate bonds when interest rates decline or remain relatively stable. Although volatile, inverse floaters typically offer the potential for yields available on fixed rate bonds with comparable credit quality, coupon, call provisions and maturity. Inverse floaters have varying degrees of liquidity based upon the liquidity of the underlying bonds deposited in a special purpose trust.

The Fund may invest in inverse floating rate securities issued by special purpose trusts that have recourse to the Fund. In Nuveen Asset Management's discretion, the Fund may enter into a separate shortfall and forbearance agreement with the third party sponsor of a special purpose trust. The Fund may enter into such recourse agreements (i) when the liquidity provider to the special purpose trust requires such an agreement because the level of leverage in the trust exceeds the level that the liquidity provider is willing to support absent such an agreement; and/or (ii) to seek to prevent the liquidity provider from collapsing the trust in the event that the municipal obligation held in the trust has declined in value. Such an agreement would require the Fund to reimburse the third party sponsor of such inverse floater, upon termination of the trust issuing the inverse floater, the difference between the liquidation value of the bonds held in the trust and the principal amount due to the holders of floating rate interests. Such agreements may expose the Fund to a risk of loss that exceeds its investment in the inverse floating rate securities. Absent a shortfall and forbearance agreement, the Fund would not be required to make such a reimbursement. If the Fund chooses not to enter into such an agreement, the special purpose trust could be liquidated and the Fund could incur a loss.

The Fund's investments in inverse floating rate securities issued by special purpose trusts that have recourse to the Fund may be highly leveraged. The structure and degree to which the Fund's inverse floating rate securities are highly leveraged will vary based upon a number of factors, including the size of the trust itself and the terms of the underlying municipal security held in a special purpose trust. An inverse floating rate security generally is considered highly leveraged if the principal amount of the short-term floating rate interests issued by the related special purpose trust is in excess of three times the principal amount of the inverse floating rate securities owned by the trust (the ratio of the principal amount of such short-term floating rate interests to the principal amount of the inverse floating rate securities is referred to as the "gearing"). In the event of a significant decline in the value of an underlying security, the Fund may suffer losses in excess of the amount of its investment (up to an amount equal to the value of the municipal securities underlying the inverse floating rate securities) as a result of liquidating special purpose trusts or other collateral required to maintain the Fund's anticipated effective leverage ratio.

Investments in inverse floating rate securities create effective leverage. The use of leverage creates special risks for Common Shareholders. See "Leverage and Risk Factors - Inverse Floating Rate Securities Risk." The Fund will segregate or earmark liquid assets with its custodian in accordance with the 1940 Act to cover its obligations with respect to its investments in special purpose trusts. See also "Segregation of Assets" in the SAI.

*Tender Option Bonds.* A tender option bond is a municipal security (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued with the agreement of a third party, such as a bank, broker-dealer or other financial institution, which grants the security holders the option, at periodic intervals, to tender their securities to the institution and receive the face value thereof. As consideration for providing the option, the financial institution receives periodic fees equal to the difference between the bond's fixed coupon rate and the rate, as determined by a remarketing or similar agent at or near the commencement of such period, that would cause the securities, coupled with the tender option, to trade at par on the date of such determination. Thus, after payment of this fee, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. However, an institution will not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrade in the credit rating assigned to the issuer of the bond. The Fund intends to invest in tender option bonds the interest on which will, in the opinion of bond counsel, counsel for the issuer of interests therein or counsel selected by Nuveen Asset Management, be exempt from regular federal income tax. However, because there can be no assurance that the Internal Revenue Service (the "IRS") will agree with such counsel's opinion in any particular case, there is a risk that the Fund will not be considered the owner of such tender option bonds and thus will not be entitled to treat such interest as exempt from such tax. Additionally, the federal income tax treatment of certain other aspects of these investments, including the proper tax treatment of tender option bonds and the associated fees in relation to various regulated investment company tax provisions, is unclear. The Fund intends to manage its portfolio in a manner designed to eliminate or minimize any adverse impact from the tax rules applicable to these investments.

*Special Taxing Districts.* Special taxing districts are organized to plan and finance infrastructure developments to induce residential, commercial and industrial growth and redevelopment. The bond financing methods such as tax increment finance, tax assessment, special services district and Mello-Roos bonds, are generally payable solely from taxes or other revenues attributable to the specific projects financed by the bonds without recourse to the credit or taxing power of related or overlapping municipalities. They often are exposed to real estate development-related risks and can have more taxpayer concentration risk than general tax-supported bonds, such as general obligation bonds. Further, the fees, special taxes, or tax allocations and other revenues that are established to secure such financings are generally limited as to the rate or amount that may be levied or assessed and are not subject to increase pursuant to rate covenants or municipal or corporate guarantees. The bonds could default if development failed to progress as anticipated or if larger taxpayers failed to pay the assessments, fees and taxes as provided in the financing plans of the districts.

*When-Issued and Delayed Delivery Transactions.* The Fund may buy and sell municipal securities on a when-issued or delayed delivery basis, making payment or taking delivery at a later date, normally within 15 to 45 days of the trade date. This type of transaction may involve an element of risk because no interest accrues on the bonds prior to settlement and, because bonds are subject to market fluctuations, the value of the bonds at time of delivery may be less (or more) than cost. A separate account of the Fund will be established with its custodian consisting of cash, cash equivalents, or liquid securities having a market value at all times at least equal to the amount of the commitment. Income generated by any such assets which provide taxable income for federal income tax purposes is includable in the taxable income of the Fund and, to the extent distributed, will be taxable distributions to shareholders. The Fund may enter into contracts to purchase municipal bonds on a forward basis (*i.e.*, where settlement will occur more than 60 days from the date of the transaction) only to the extent that the Fund specifically collateralizes such obligations with a security that is expected to be called or mature within sixty days before or after the settlement date of the forward transaction. The commitment to purchase securities on a when-issued, delayed delivery or forward basis may involve an element of risk because no interest accrues on the bonds prior to settlement and at the time of delivery the market value may be less than cost.

*Zero Coupon Bonds.* A zero coupon bond is a bond that typically does not pay interest either for the entire life of the obligation or for an initial period after the issuance of the obligation. When held to its maturity, the holder receives the par value of the zero coupon bond, which generates a return equal to the difference between the purchase price and its maturity value. A zero coupon bond is normally issued and traded at a deep discount from face value. This original issue discount (OID) approximates the total amount of interest the security will accrue and compound prior to its maturity and reflects the payment deferral and credit risk associated with the instrument. Because zero coupon securities and other OID instruments do not pay cash interest at regular intervals, the instruments' ongoing accruals require ongoing judgments concerning the collectability of deferred payments and the value of any associated collateral. As a result, these securities may be subject to greater value fluctuations and less liquidity in the event of adverse market conditions than comparably rated securities that pay cash on a current basis. Because zero coupon bonds, and OID instruments generally, allow an issuer to avoid or delay the need to generate cash to meet current interest payments, they may involve greater payment deferral and credit risk than coupon loans and bonds that pay interest currently or in cash. The Fund generally will be required to distribute dividends to shareholders representing the income of these instruments as it accrues, even though the Fund will not receive all of the income on a current basis or in cash. Thus, the Fund may have to sell other investments, including when it may not be advisable to do so, and use the cash proceeds to make income distributions to its shareholders. For accounting purposes, these cash distributions to shareholders will not be treated as a return of capital.

Further, NFALLC collects management fees on the value of a zero coupon bond or OID instrument attributable to the ongoing non-cash accrual of interest over the life of the bond or other instrument. As a result, NFALLC receives non-refundable cash payments based on such non-cash accruals while investors incur the risk that such non-cash accruals ultimately may not be realized.

*Structured Notes.* The Fund may utilize structured notes and similar instruments for investment purposes and also for hedging purposes. Structured notes are privately negotiated debt obligations where the principal and/

or interest is determined by reference to the performance of a benchmark asset, market or interest rate (an embedded index), such as selected securities, an index of securities or specified interest rates, or the differential performance of two assets or markets. The terms of such structured instruments normally provide that their principal and/or interest payments are to be adjusted upwards or downwards (but not ordinarily below zero) to reflect changes in the embedded index while the structured instruments are outstanding. As a result, the interest and/or principal payments that may be made on a structured product may vary widely, depending upon a variety of factors, including the volatility of the embedded index and the effect of changes in the embedded index on principal and/or interest payments. The rate of return on structured notes may be determined by applying a multiplier to the performance or differential performance of the referenced index or indices or other assets. Application of a multiplier involves leverage that will serve to magnify the potential for gain and the risk of loss. These types of investments may generate taxable income.

### **Special Considerations Relating to California Municipal Securities**

As described above, the Fund will invest at least 80% of its managed assets in California municipal securities and other related investments, the income from which is exempt from regular federal and California income tax. The Fund is therefore susceptible to political, economic or regulatory factors affecting issuers of California municipal securities. See *Concentration Risk in California Issuers* and Appendix A of this Prospectus (*Factors Affecting Municipal Securities in California*). Information regarding the financial condition of the State of California is ordinarily included in various public documents issued thereby, such as the official statements prepared in connection with the issuance of general obligation bonds of the State of California. Such official statements may be obtained by contacting the State Treasurer's Office at 800-900-3873 or at [www.treasurer.ca.gov](http://www.treasurer.ca.gov). Complete text of the 2016-2017 proposed budget, the 2015-2016 budget, and prior budgets may be found at the electronic budget website of the Department of Finance ([www.ebudget.ca.gov](http://www.ebudget.ca.gov)).

The State of California is a party to numerous legal proceedings, many of which normally occur in governmental operations. Information regarding some of the more significant litigation pending against the State would ordinarily be included in various public documents issued thereby, such as the official statements referred to above prepared in connection with the issuance of general obligation bonds of California.

The Legislative Analyst's Office (the LAO) has released several reports which include their estimates and assessments of State budget acts and associated fiscal and economic projections. Publications from the LAO can be read in full by accessing the LAO's website ([www.lao.ca.gov](http://www.lao.ca.gov)) or by contacting the LAO at 916-445-4656. Complete text of the State Controller's monthly summary analysis may be accessed at the State Controller's website ([www.sco.ca.gov](http://www.sco.ca.gov)).

It should be noted that the creditworthiness of obligations issued by local California issuers may be unrelated to the creditworthiness of obligations issued by the State of California, and that there is no obligation on the part of the State of California to make payment on such local obligations in the event of default.

None of the information on the above websites is incorporated herein by reference.

### **Derivatives**

The Fund may invest in certain derivative instruments in pursuit of its investment objectives. Such instruments include financial futures contracts, swap contracts (including interest rate and credit default swaps), options on financial futures, options on swap contracts or other derivative instruments. The Fund may use also credit default swaps and interest rate swaps. Credit default swaps may require initial premium (discount) payments as well as periodic payments (receipts) related to the interest leg of the swap or to the default of a reference obligation. If

the Fund is a seller of a contract, the Fund would be required to pay the par (or other agreed upon) value of a referenced debt obligation to the counterparty in the event of a default or other credit event by the reference issuer, such as a U.S. or foreign corporate issuer, with respect to such debt obligations. In

return, the Fund would receive from the counterparty a periodic stream of payments over the term of the contract provided that no event of default has occurred. If no default occurs, the Fund would keep the stream of payments and would have no payment obligations. As the seller, the Fund would be subject to investment exposure on the notional amount of the swap. If the Fund is a buyer of a contract, the Fund would have the right to deliver a referenced debt obligation and receive the par (or other agreed-upon) value of such debt obligation from the counterparty in the event of a default or other credit event (such as a credit downgrade) by the reference issuer, such as a U.S. or foreign corporation, with respect to its debt obligations. In return, the Fund would pay the counterparty a periodic stream of payments over the term of the contract provided that no event of default has occurred. If no default occurs, the counterparty would keep the stream of payments and would have no further obligations to the Fund. Interest rate swaps involve the exchange by the Fund with a counterparty of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. The Fund will usually enter into interest rate swaps on a net basis; that is, the two payment streams will be netted out in a cash settlement on the payment date or dates specified in the instrument, with the Fund receiving or paying, as the case may be, only the net amount of the two payments.

See Hedging Strategies and Other Uses of Derivatives and Segregation of Assets in the SAI.

The requirements for qualification as a regulated investment company may also limit the extent to which the Fund may employ futures, options on futures or swaps.

NFALLC and Nuveen Asset Management may use derivative instruments to seek to enhance return, to hedge some of the risk of the Fund's investments in municipal securities or as a substitute for a position in the underlying asset. These types of strategies may generate taxable income.

There is no assurance that these derivative strategies will be available at any time or that NFALLC and Nuveen Asset Management will determine to use them for the Fund or, if used, that the strategies will be successful.

### **Other Investment Companies**

The Fund may invest up to 10% of its Managed Assets in securities of other open- or closed-end investment companies (including exchange-traded funds (ETFs)) that invest primarily in municipal securities of the types in which the Fund may invest directly. In addition, the Fund may invest a portion of its Managed Assets in pooled investment vehicles (other than investment companies) that invest primarily in municipal securities of the types in which the Fund may invest directly. The Fund generally expects that it may invest in other investment companies and/or other pooled investment vehicles either during periods when it has large amounts of uninvested cash, such as the period shortly after the Fund receives the proceeds of the offering of its Common Shares, or during periods when there is a shortage of attractive, high-yielding municipal securities available in the market. The Fund may invest in investment companies that are advised by NFALLC, Nuveen Asset Management or their respective affiliates to the extent permitted by applicable law and/or pursuant to exemptive relief from the U.S. Securities and Exchange Commission (the SEC). The Fund has not received or applied for, nor does it currently intend to apply for, any such relief. As a stockholder in an investment company, the Fund will bear its ratable share of that investment company's expenses, and would remain subject to payment of the Fund's advisory and administrative fees with respect to assets so invested. Common Shareholders would therefore be subject to duplicative expenses to the extent the Fund invests in other investment companies.

Nuveen Asset Management will take expenses into account when evaluating the investment merits of an investment in an investment company relative to available municipal security investments. In addition, the securities of other investment companies may also be leveraged and will therefore be subject to the same leverage risks described herein. As described in the section entitled Risk Factors, the net asset value and market value of leveraged shares will be more volatile and the yield to Common Shareholders will tend to fluctuate more than the yield generated by unleveraged shares.

## Portfolio Turnover

The Fund may buy and sell municipal securities to accomplish its investment objectives in relation to actual and anticipated changes in interest rates. The Fund also may sell one municipal security and buy another of comparable quality at about the same time to take advantage of what Nuveen Asset Management believes to be a temporary price disparity between the two bonds that may result from imbalanced supply and demand. The Fund also may engage in a limited amount of short-term trading, consistent with its investment objectives. The Fund may sell securities in anticipation of a market decline (a rise in interest rates) or buy securities in anticipation of a market rise (a decline in interest rates) and later sell them, but the Fund will not engage in trading solely to recognize a gain. The Fund will attempt to achieve its investment objectives by prudently selecting California municipal securities with a view to holding them for investment. Although the Fund cannot accurately predict its annual portfolio turnover rate, the Fund expects, though it cannot guarantee, that its annual portfolio turnover rate generally will not exceed 25% under normal circumstances. For the fiscal year ended February 29, 2016, the Fund's portfolio turnover rate was 15%. There are no limits on the rate of portfolio turnover, and investments may be sold without regard to length of time held when investment considerations warrant such action. A higher portfolio turnover rate results in correspondingly greater brokerage commissions and other transactional expenses that are borne by the Fund. In addition, high portfolio turnover may result in the realization of net short term capital gains by the Fund which, when distributed to shareholders, will be taxable as ordinary income. See Tax Matters.

## USE OF LEVERAGE

The Fund uses leverage to seek to enhance total returns. Currently, the Fund employs financial leverage through its outstanding VRDP Shares, which have seniority over the Common Shares. The Fund also invests in residual interest certificates of tender option bond trusts, also called inverse floating rate securities, that have the economic effect of leverage because the Fund's investment exposure to the underlying bonds held by the trust have been effectively financed by the trust's issuance of floating rate certificates. See Inverse Floating Rate Securities and Risk Factors Inverse Floating Rate Securities. The combined economic effect of the total leverage used by the Fund is referred to herein as effective leverage.

For the fiscal year ended February 29, 2016, the average liquidation preference of the VRDP Shares outstanding and the annual dividend rate on the VRDP Shares were \$699.6 million and 0.12% respectively. As of February 29, 2016, the Fund's effective leverage was approximately 35% of its Managed Assets.

During the current fiscal period, the Fund, along with certain other funds managed by the Adviser ( Participating Funds ), established a 364-day, \$2.53 billion standby credit facility with a group of lenders, under which the Participating Funds may borrow for various purposes other than leveraging for investment purposes. A large portion of this facility's capacity (and its associated costs as described below) is currently dedicated for use by a small number of Participating Funds, which does not include the Fund. The remaining capacity under the facility (and the corresponding portion of the facility's annual costs) is separately dedicated to most of the other open-end funds in the Nuveen fund family, along with a number of Nuveen closed-end funds, including the Fund. The credit facility expires in July 2016 unless extended or renewed. During the current fiscal period, the Fund did not utilize this facility.

The timing and terms of any leverage transactions is determined by the Fund's Board. The Fund will seek to invest the proceeds from financial leverage in a manner consistent with the Fund's objectives and policies. Leverage involves special risks. See Risk Factors Leverage Risk. There is no assurance that the Fund's leveraging strategy will be successful.

Following an offering of additional Common Shares from time to time, the Fund's leverage ratio will decrease as a result of the increase in net assets attributable to Common Shares. A lower leverage ratio may result in either lower (or higher) returns to Common Shareholders over a period of time to the extent that net returns on

the Fund's investment portfolio exceed (or fall below) its cost of leverage over that period. Any change in returns may impact the level of the Fund's distributions.

The Fund's investments in inverse floating rate securities pay dividends at rates based on short-term periods, which are reset periodically. So long as the Fund's portfolio is invested in securities that provide a higher rate of return than the Fund's cost of leverage (after taking expenses into consideration), the leverage will cause you to receive a higher current rate of return than if the Fund were not leveraged.

Changes in the value of the Fund's bond portfolio, including costs attributable to preferred shares will be borne entirely by the Common Shareholders. If there is a net decrease (or increase) in the value of the Fund's investment portfolio, the leverage will decrease (or increase) the net asset value per Common Share to a greater extent than if the Fund were not leveraged.

The Fund pays NFALLC (which in turn pays a portion of its fees to Nuveen Asset Management) a management fee based on a percentage of Managed Assets. Managed Assets for this purpose includes the proceeds realized from the Fund's use of financial leverage. See Management of the Fund Investment Management Agreements. NFALLC and Nuveen Asset Management will base its decision whether and how much to leverage the Fund based solely on its assessment of whether such use of leverage will advance the Fund's investment objective. NFALLC and Nuveen Asset Management will be responsible for using leverage to achieve the Fund's investment objective. However, the fact that a decision to increase the Fund's leverage will have the effect of increasing Managed Assets and therefore NFALLC's management fee, as well as the portion payable to Nuveen Asset Management, means that NFALLC and Nuveen Asset Management may have an incentive to increase the Fund's use of leverage. NFALLC and Nuveen Asset Management will seek to manage that incentive by only increasing the Fund's use of leverage when it determines that such increase is consistent with the Fund's investment objective, and by periodically reviewing the Fund's performance and use of leverage with the Fund's Board of Trustees.

For tax purposes, the Fund is currently required to allocate net capital gain and other taxable income, if any, between the Common Shares and preferred shares, including VRDP Shares, in proportion to total dividends paid to each class for the year in which the net capital gain or other taxable income is realized. If net capital gain or other taxable income is allocated to preferred shares (instead of solely tax-exempt income), the Fund will likely have to pay higher total dividends to preferred shareholders or make special payments to preferred shareholders to compensate them for the increased tax liability. This would reduce the total amount of dividends paid to the Common Shareholders.

Under the 1940 Act, the Fund is not permitted to issue preferred shares unless immediately after such issuance, the value of the Fund's asset coverage is at least 200% of the liquidation value of the outstanding preferred shares (i.e., such liquidation value may not exceed 50% of the Fund's asset coverage). In addition, the Fund is not permitted to declare any cash dividend or other distribution on its Common Shares unless, at the time of such declaration, the value of the Fund's asset coverage less liabilities other than borrowings is at least 200% of such liquidation value. The Fund intends, to the extent possible, to purchase or redeem preferred shares, including VRDP Shares, from time to time to the extent necessary in order to maintain coverage of any preferred shares of at least 200%. When the Fund has preferred shares outstanding, two of the Fund's trustees will be elected by the holders of preferred shares, voting separately as a class. The remaining trustees of the Fund are elected by holders of Common Shares and preferred shares voting together as a single class. In the event the Fund fails to pay dividends on preferred shares on for two years, preferred shareholders would be entitled to elect a majority of the trustees of the Fund.

The Fund may be subject to certain restrictions imposed by either guidelines of one or more rating agencies that may issue ratings for preferred shares. These guidelines may impose asset coverage or portfolio composition requirements that are more stringent than those imposed on the Fund by the 1940 Act. It is not anticipated that these covenants or guidelines will impede NFALLC and Nuveen Asset Management from managing the Fund's portfolio in accordance with the Fund's investment objectives and policies. In addition to other considerations, to

the extent that the Fund believes that the covenants and guidelines required by the rating agencies or lenders would impede its ability to meet its investment objective, or if the Fund is unable to obtain the rating on preferred shares (also expected to be at least AA/Aa), the Fund will not issue preferred shares, including additional VRDP Shares.

Assuming the utilization of leverage through the use of preferred shares in the aggregate amount of approximately 32% of the Fund's Managed Assets, at an aggregate cost of leverage of 1.50%, the income generated by the Fund's portfolio (net of non-leverage expenses) must exceed 0.48% in order to cover such costs of leverage. Of course, these numbers are merely estimates, used for illustration. Actual costs of leverage may vary frequently and may be significantly higher or lower than the rate estimated above.

The Fund may borrow money for repurchase of its shares or as a temporary measure for extraordinary or emergency purposes, including the payment of dividends and the settlement of securities transactions which otherwise might require untimely dispositions of Fund securities.

The following table is furnished in response to requirements of the SEC. It is designed to illustrate the effect of leverage on Common Share total return, assuming investment portfolio total returns (comprised of income and changes in the value of bonds held in the Fund's portfolio net of expenses) at the assumed portfolio total return rates provided in the table. These assumed investment portfolio returns are hypothetical figures and are not necessarily indicative of the investment portfolio returns expected to be experienced by the Fund. The table further reflects the use of leverage through preferred shares representing 32% of the Fund's total capital as well as an estimated aggregate cost of 1.35% on the Fund's leverage. See Risk Factors Leverage Risk and Use of Leverage.

Assumed Portfolio Total Return	-10%	-5%	0%	5%	10%
Common Shares Total Return	-15.41%	-8.06%	-0.71%	6.65%	14.00%

Common Share total return is composed of two elements the Common Share dividends paid by the Fund (the amount of which is largely determined by the net investment income of the Fund after paying dividends on VRDP Shares and other expenses associated with outstanding VRDP shares) and gains or losses on the value of the securities the Fund owns. As required by SEC rules, the table assumes that the Fund is more likely to suffer capital losses than capital appreciation. For example, to assume a total return of 0%, the Fund must assume that the tax-exempt interest it receives on its municipal securities investments is entirely offset by losses in the value of those securities.

## RISK FACTORS

Risk is inherent in all investing. Investing in any investment company security involves risk, including the risk that you may receive little or no return on your investment or even that you may lose part or all of your investment. Therefore, before investing you should consider carefully the following risks that you assume when you invest in Common Shares.

### Investment and Market Risk

An investment in the Fund's Common Shares is subject to investment risk, including the possible loss of the entire principal amount that you invest. Your investment in Common Shares represents an indirect investment in the municipal securities owned by the Fund, which generally trade in the over-the-counter markets. Your Common Shares at any point in time may be worth less than your original investment, even after taking into account the reinvestment of Fund dividends and distributions. In addition, if the current national economic downturn deteriorates into a prolonged recession, the ability of municipalities to collect revenue and service their obligations could be materially and adversely affected.

### Recent Market Circumstances

In the recent past, the debt and equity capital markets in the United States were negatively impacted by significant write-offs in the financial services sector relating to sub-prime mortgages and the re-pricing of credit risk in the broadly syndicated market, among other things. In addition, domestic and international markets have experienced acute turmoil due to a variety of factors, including economic unrest in Italy, Greece, Spain, Ireland, Portugal, other EU countries and China. These events, along with the downgrade to the U.S. credit rating, deterioration of the housing market, the failure of major financial institutions and the resulting U.S. federal government actions (as well as the actions of many governments or quasigovernmental organizations throughout the world, which responded to the turmoil with a variety of significant fiscal and monetary policy changes) led in the recent past, and may lead in the future, to worsening general economic circumstances, which did, and could, materially and adversely impact the broader financial and credit markets and reduce the availability of debt and equity capital for the market as a whole and financial firms in particular. These events may increase the volatility of the value of securities owned by the Fund and/or result in sudden and significant valuation decreases in its portfolio. These events also may make it more difficult for the Fund to accurately value its securities or to sell its securities on a timely basis. In addition, illiquidity and volatility in the credit markets may directly and adversely affect the setting of the Fund's distribution rates on its Common Shares.

While the extreme volatility and disruption that U.S. and global markets experienced for an extended period of time beginning in 2007 and 2008 has generally subsided, uncertainty and periods of volatility remain, and risks to a robust resumption of growth persist. Federal Reserve policy, including with respect to certain interest rates, as well as the decision to cease purchasing securities pursuant to quantitative easing, may cause interest rates to rise and may adversely affect the value, volatility and liquidity of dividend and interest paying securities. Market volatility, rising interest rates and/or a return to unfavorable economic circumstances could impair the Fund's ability to achieve its investment objectives.

General market uncertainty and consequent re-pricing of risk have led to market imbalances of sellers and buyers, which in turn have resulted in significant valuation uncertainties in a variety of securities and significant and rapid value decline in certain instances. Additionally, periods of market volatility remain, and may continue to occur in the future, in response to various political, social and economic events both within and outside of the United States. These circumstances resulted in, and in many cases continue to result in, greater price volatility, less liquidity, widening credit spreads and a lack of price transparency, with many securities remaining illiquid and of uncertain value. Such market circumstances may make valuation of some of the Fund's investments uncertain and/or result in sudden and significant valuation increases or declines in its holdings. If there is a significant decline in the value of the Fund's portfolio, this may impact the asset coverage levels for any outstanding leverage the Fund may have.

### **Market Disruption and Geopolitical Risk**

The aftermath of the war in Iraq, instability in Afghanistan, Pakistan, Egypt, Libya, Syria, Russia, Ukraine and the Middle East, possible terrorist attacks in the United States and around the world, growing social and political discord in the United States, the European debt crisis, the response of the international community through economic sanctions and otherwise to Russia's recent annexation of the Crimea region of Ukraine and posture vis-a-vis Ukraine, further downgrade of U.S. Government securities and other similar events, may have long-term effects on the U.S. and worldwide financial markets and may cause further economic uncertainties in the United States and worldwide. The Fund does not know and cannot predict how long the securities markets may be affected by these events and the effects of these and similar events in the future on the U.S. economy and securities markets. The Fund may be adversely affected by abrogation of international agreements and national laws which have created the market instruments in which the Fund may invest, failure of the designated national and international authorities to enforce compliance with the same laws and agreements, failure of local, national and international organization to carry out their duties prescribed to them under the relevant agreements, revisions of these laws and agreements which dilute their effectiveness or conflicting interpretation of provisions of the same laws and agreements. The Fund may be adversely affected by uncertainties such as terrorism, international political developments, and changes in government policies, taxation, restrictions on foreign investment and currency repatriation, currency fluctuations and other developments in the laws and regulations of the countries in which it is invested.

### **Legislation and Regulatory Risk**

At any time after the date of this prospectus, legislation or additional regulations may be enacted that could negatively affect the assets of the Fund, securities held by the Fund or the issuers of such securities. Changing approaches to regulation may have a negative impact on the entities and/or securities in which the Fund invests. Legislation or regulation may also change the way in which the Fund itself is regulated. Fund shareholders may incur increased costs resulting from such legislation or additional regulation. There can be no assurance that future legislation, regulation or deregulation will not have a material adverse effect on the Fund or will not impair the ability of the Fund to achieve its investment objectives.

For example, the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act) is designed to impose stringent regulation on the over-the-counter derivatives market in an attempt to increase transparency and accountability and provides for, among other things, new clearing, execution, margin, reporting, recordkeeping, business conduct, disclosure, position limit, minimum net capital and registration requirements. Although the U.S. Commodity Futures Trading Commission (CFTC) has released final rules under the Dodd-Frank Act, many of the provisions are subject to further final rulemaking, and thus the Dodd-Frank Act's ultimate impact remains unclear.

The SEC also indicated that it may adopt new policies on the use of derivatives by registered investment companies. Such policies could affect the nature and extent of derivatives use by the Fund. While the nature of any such regulations is uncertain at this time, it is possible that such regulations could limit the implementation of the Fund's use of derivatives, which could have an adverse impact on the Fund.

Additionally, the Fund is operated by persons who have claimed an exclusion, granted to operators of registered investment companies like the Fund, from registration as a commodity pool operator under Rule 4.5 promulgated by the CFTC pursuant to its authority under the Commodity Exchange Act (CEA) and, therefore, is not subject to registration or regulation as a commodity pool operator. As a result, the Fund is limited in its ability to use commodity futures (which include futures on broad-based securities indexes and interest rate futures) or options on commodity futures, engage in swaps transactions or make certain other investments (whether directly or indirectly through investments in other investment vehicles) for purposes other than bona fide hedging. With respect to transactions other than for bona fide hedging purposes, either: (1) the aggregate initial margin and premiums required to establish the Fund's positions in such investments may not exceed 5% of the liquidation value of the Fund's portfolio (after accounting for unrealized profits and unrealized losses on any

such investments); or (2) the aggregate net notional value of such instruments, determined at the time the most recent position was established, may not exceed 100% of the liquidation value of the Fund's portfolio (after accounting for unrealized profits and unrealized losses on any such positions). In addition to meeting one of the foregoing trading limitations, the Fund may not market itself as a commodity pool or otherwise as a vehicle for trading in the futures, options or swaps markets. If the Fund does not continue to claim the exclusion, it would likely become subject to registration and regulation as a commodity pool operator. The Fund may incur additional expenses as a result of the CFTC's registration and regulatory requirements.

### **Market Discount from Net Asset Value**

Shares of closed-end investment companies like the Fund have during some periods traded at prices higher than net asset value and have during other periods traded at prices lower than net asset value. The Fund cannot predict whether Common Shares will trade at, above or below net asset value. This characteristic is a risk separate and distinct from the risk that the Fund's net asset value could decrease as a result of investment activities. Investors bear a risk of loss to the extent that the price at which they sell their shares is lower in relation to the Fund's net asset value than at the time of purchase, assuming a stable net asset value. Proceeds from the sale of Common Shares in this offering will be reduced by transaction costs (if applicable, which vary depending on the offering method used). The Common Shares are designed primarily for long-term investors, and you should not view the Fund as a vehicle for trading purposes.

### **Credit and Below Investment Grade Risk**

Credit risk is the risk that one or more municipal securities in the Fund's portfolio will decline in price, or the issuer thereof will fail to pay interest or principal when due, because the issuer of the security experiences a decline in its financial status. In general, lower-rated municipal securities carry a greater degree of risk that the issuer will lose its ability to make interest and principal payments, which could have a negative impact on the Fund's net asset value or dividends. Credit risk is increased when a portfolio security is downgraded or the perceived creditworthiness of the issuer deteriorates. The Fund may invest up to 20% of its Managed Assets in municipal securities that are rated below investment grade at the time of investment or that are unrated but judged to be of comparable quality by Nuveen Asset Management. No more than 10% of the Fund's Managed Assets may be invested in municipal securities rated below B3/B- or that are unrated but judged to be of comparable quality by Nuveen Asset Management. If a municipal security satisfies the rating requirements described above at the time of investment and is subsequently downgraded below that rating, the Fund will not be required to dispose of the security. If a downgrade occurs, Nuveen Asset Management will consider what action, including the sale of the security, is in the best interests of the Fund and its shareholders. This means that the Fund may invest in municipal securities that are involved in bankruptcy or insolvency proceedings or are experiencing other financial difficulties at the time of acquisition (such securities are commonly referred to as distressed securities). Municipal securities of below investment grade quality, commonly referred to as junk bonds, are regarded as having predominately speculative characteristics with respect to capacity to pay interest and repay principal when due, are susceptible to default or decline in market value due to adverse economic and business developments. Also, to the extent that the rating assigned to a municipal security in the Fund's portfolio is downgraded by any NRSRO, the market price and liquidity of such security may be adversely affected. The market values for municipal securities of below investment grade quality tend to be volatile, and these securities are less liquid than investment grade municipal securities. For these reasons, an investment in the Fund, compared with a portfolio consisting solely of investment grade securities, may experience the following:

increased price sensitivity resulting from changing interest rates and/or a deteriorating economic environment;

greater risk of loss due to default or declining credit quality;

adverse issuer specific events that are more likely to render the issuer unable to make interest and/or principal payments; and

the possibility that a negative perception of the below investment grade market develops, resulting in the price and liquidity of below investment grade securities becoming depressed, and this negative perception could last for a significant period of time.

Adverse changes in economic conditions are more likely to lead to a weakened capacity of a below investment grade issuer to make principal payments and interest payments compared to an investment grade issuer. The principal amount of below investment grade securities outstanding has proliferated in the past decade as an increasing number of issuers have used below investment grade securities for financing. The current downturn may severely affect the ability of highly leveraged issuers to service their debt obligations or to repay their obligations upon maturity. As the national economy experiences the current economic downturn, resulting in decreased tax and other revenue streams of municipal issuers, or in the event interest rates rise sharply, increasing the interest cost on variable rate instruments and negatively impacting economic activity, the number of defaults by below investment grade municipal issuers is likely to increase. Similarly, downturns in profitability in specific industries could adversely affect private activity bonds. The market values of lower quality debt securities tend to reflect individual developments of the issuer to a greater extent than do higher quality securities, which react primarily to fluctuations in the general level of interest rates. Factors having an adverse impact on the market value of lower quality securities may have an adverse impact on the Fund's net asset value and the market value of its Common Shares. In addition, the Fund may incur additional expenses to the extent it is required to seek recovery upon a default in payment of principal or interest on its portfolio holdings. In certain circumstances, the Fund may be required to foreclose on an issuer's assets and take possession of its property or operations. In such circumstances, the Fund would incur additional costs in disposing of such assets and potential liabilities from operating any business acquired.

The secondary market for below investment grade securities may not be as liquid as the secondary market for more highly rated securities, a factor that may have an adverse effect on the Fund's ability to dispose of a particular security. There are fewer dealers in the market for below investment grade municipal securities than the market for investment grade municipal securities. The prices quoted by different dealers for below investment grade municipal securities may vary significantly, and the spread between the bid and ask price is generally much larger for below investment grade municipal securities than for higher quality instruments. Under adverse market or economic conditions, the secondary market for below investment grade securities could contract further, independent of any specific adverse changes in the condition of a particular issuer, and these instruments may become illiquid. As a result, the Fund could find it more difficult to sell these securities or may be able to sell the securities only at prices lower than if such securities were widely traded. Prices realized upon the sale of such lower rated or unrated securities, under these circumstances, may be less than the prices used in calculating the Fund's net asset value.

Issuers of such below investment grade securities are highly leveraged and may not have available to them more traditional methods of financing. Therefore, the risk associated with acquiring the securities of such issuers generally is greater than is the case with higher rated securities. For example, during an economic downturn or a sustained period of rising interest rates, highly leveraged issuers of below investment grade securities may experience financial stress. During such periods, such issuers may not have sufficient revenues to meet their interest payment obligations. The issuer's ability to service its debt obligations also may be adversely affected by specific developments, the issuer's inability to meet specific projected forecasts or the unavailability of additional financing. The risk of loss from default by the issuer is significantly greater for the holders of below investment grade securities because such securities are generally unsecured and are often subordinated to other creditors of the issuer. Prices and yields of below investment grade securities will fluctuate over time and, during periods of economic uncertainty, volatility of below investment grade securities may adversely affect the Fund's net asset value. In addition, investments in below investment grade zero coupon bonds rather than income-bearing below investment grade securities, may be more speculative and may be subject to greater fluctuations in value due to changes in interest rates.

The Fund may invest in distressed securities, which are securities issued by companies that are involved in bankruptcy or insolvency proceedings or are experiencing other financial difficulties at the time of acquisition by

the Fund. The issuers of such securities may be in transition, out of favor, financially leveraged or troubled, or potentially troubled, and may be or have recently been involved in major strategic actions, restructurings, bankruptcy, reorganization or liquidation. These characteristics of these companies can cause their securities to be particularly risky, although they also may offer the potential for high returns. These companies securities may be considered speculative, and the ability of the companies to pay their debts on schedule could be affected by adverse interest rate movements, changes in the general economic climate, economic factors affecting a particular industry or specific developments within the companies. Distressed securities frequently do not produce income while they are outstanding and may require the Fund to bear certain extraordinary expenses in order to protect and recover its investment.

Investments in lower rated or unrated securities may present special tax issues for the Fund to the extent that the issuers of these securities default on their obligations pertaining thereto, and the federal income tax consequences to the Fund as a holder of such distressed securities may not be clear.

### **Interest Rate Risk**

Generally, when market interest rates rise, bond prices fall, and vice versa. Interest rate risk is the risk that the municipal securities in the Fund's portfolio will decline in value because of increases in market interest rates. As interest rates decline, issuers of municipal securities may prepay principal earlier than scheduled, forcing the Fund to reinvest in lower-yielding securities and potentially reducing the Fund's income. As interest rates increase, slower than expected principal payments may extend the average life of securities, potentially locking in a below-market interest rate and reducing the Fund's value. In typical market interest rate environments, the prices of longer-term municipal securities generally fluctuate more than prices of shorter-term municipal securities as interest rates change. Because the Fund invests primarily in longer-term municipal securities, the Common Shares net asset value and market price per share will fluctuate more in response to changes in market interest rates than if the Fund invested primarily in shorter-term municipal securities. Because the values of lower-rated and comparable unrated debt securities are affected both by credit risk and interest rate risk, the price movements of such lower grade securities typically have not been highly correlated to the fluctuations of the prices of investment grade quality securities in response to changes in market interest rates. The Fund's use of leverage, as described herein, will also tend to increase Common Shares interest rate risk.

### **Municipal Securities Market Risk**

Investing in the municipal securities market involves certain risks. The municipal market is one in which dealer firms make markets in bonds on a principal basis using their proprietary capital, and during the recent market turmoil these firms' capital was severely constrained. As a result, some firms were unwilling to commit their capital to purchase and to serve as a dealer for municipal bonds. The amount of public information available about the municipal securities in the Fund's portfolio is generally less than that for corporate equities or bonds, and the investment performance of the Fund may therefore be more dependent on the analytical abilities of Nuveen Asset Management than if the Fund were a stock fund or taxable bond fund. The secondary market for municipal securities, particularly the below investment grade bonds in which the Fund may invest, also tends to be less well-developed or liquid than many other securities markets, which may adversely affect the Fund's ability to sell its municipal securities at attractive prices or at prices approximating those at which the Fund currently values them.

The ability of municipal issuers to make timely payments of interest and principal may be diminished during general economic downturns and as governmental cost burdens are reallocated among federal, state and local governments. In addition, laws enacted in the future by Congress or state legislatures or referenda could extend the time for payment of principal and/or interest, or impose other constraints on enforcement of such obligations, or on the ability of municipalities to levy taxes. Issuers of municipal securities might seek protection under the bankruptcy laws. In the event of bankruptcy of such an issuer, the Fund could experience delays in collecting principal and interest and the Fund may not, in all circumstances, be able to collect all principal and interest to

which it is entitled. To enforce its rights in the event of a default in the payment of interest or repayment of principal, or both, the Fund may take possession of and manage the assets securing the issuer's obligations on such securities, which may increase the Fund's operating expenses. Any income derived from the Fund's ownership or operation of such assets may not be tax-exempt.

### **Reinvestment Risk**

Reinvestment risk is the risk that income from the Fund's portfolio will decline if and when the Fund invests the proceeds from matured, traded or called bonds at market interest rates that are below the portfolio's current earnings rate. A decline in income could affect the market price of the Common Shares or their overall returns.

### **Leverage Risk**

Leverage risk is the risk associated with the use of the Fund's outstanding preferred shares, including VRDP Shares, use of tender option bonds to leverage the Common Shares or borrowings (if any). There can be no assurance that the Fund's leveraging strategy will be successful. Because the long-term municipal securities in which the Fund invests generally pay fixed rates of interest while the Fund's costs of leverage generally fluctuate with short- to intermediate-term yields, the incremental earnings from leverage will vary over time. However, the Fund may use derivatives, such as interest rate swaps, to fix the effective rate paid on all or a portion of the Fund's leverage, in an effort to lower leverage costs over an extended period. Accordingly, the Fund cannot assure you that the use of leverage will result in a higher yield or return to Common Shareholders. The income benefit from leverage will be reduced to the extent that the difference narrows between the net earnings on the Fund's portfolio securities and its cost of leverage. The income benefit from leverage will increase to the extent that the difference widens between the net earnings on the Fund's portfolio securities and its cost of leverage. If short-term rates rise, the Fund's cost of leverage could exceed the fixed rate of return on longer-term bonds held by the Fund that were acquired during periods of lower interest rates, reducing returns to Common Shareholders. This could occur even if short- to intermediate-term and long-term municipal rates rise. Because of the costs of leverage, the Fund may incur losses even if the Fund has positive returns, if they are not sufficient to cover the costs of leverage. The Fund's cost of leverage includes the dividends paid on VRDP Shares, the expenses relating to the issuance and ongoing maintenance of any borrowings, and/or the interest attributable to tender option bonds as well as any one-time costs (*e.g.*, issuance costs) and ongoing fees and expenses associated with such leverage.

The risk of loss attributable to the Fund's use of leverage is borne by Common Shareholders. The Fund's use of financial leverage can result in a greater decrease in net asset values in declining markets. The Fund's use of financial leverage similarly can magnify the impact of changing market conditions on Common Shares market prices. See [Inverse Floating Rate Securities Risk](#). Furthermore, the amount of fees paid to NFALLC (which in turn pays a portion of its fees to Nuveen Asset Management) for investment advisory services will be higher if the Fund uses leverage because the fees will be calculated based on the Fund's Managed Assets; this may create an incentive for NFALLC and Nuveen Asset Management to leverage the Fund. The Fund is required to maintain certain regulatory and rating agency asset coverage requirements in connection with its use of leverage, in order to be able to maintain the ability to declare and pay Common Shares distributions and to maintain the VRDP Shares' rating. An NRSRO could downgrade its ratings on the Fund's outstanding preferred shares, including VRDP Shares. A ratings downgrade of the Fund's preferred shares may result in higher dividend rates and may also force the redemption of such preferred shares at what might be an inopportune time in the market. These factors may result in reduced net earnings or returns to Common Shareholders.

In order to maintain required asset coverage levels, the Fund may be required to alter the composition of its investment portfolio or take other actions, such as redeeming preferred shares, including VRDP shares, or prepaying borrowings with the proceeds from portfolio transactions, at what might be an inopportune time in the market. Such actions could reduce the net earnings or returns to Common Shareholders over time.

The Fund may invest in the securities of other investment companies, which may themselves be leveraged and therefore present similar risks to those described above.

### **Concentration Risk in California Issuers**

The Fund's policy of investing in municipal securities of issuers located in California makes the Fund more susceptible to the adverse economic, political or regulatory occurrences affecting such issuers.

The information set forth below and the related information in Appendix A of this Prospectus is derived from sources that are generally available to investors. The information is intended to give a recent historical description and is not intended to indicate future or continuing trends in the financial or other positions of California. It should be noted that the creditworthiness of obligations issued by local California issuers may be unrelated to the creditworthiness of obligations issued by the State of California, and that there is no obligation on the part of the State to make payment on such local obligations in the event of default.

California's fiscal situation heightens the risk of investing in bonds issued by the State and its political subdivisions, agencies, instrumentalities and authorities, including the risk of default, and also heightens the risk that the prices of California municipal securities, and the Fund's net asset value, will experience greater volatility. As of April 2016, California general obligation bonds were rated Aa3 by Moody's, AA- by S&P and A+ by Fitch. There can be no assurance that such ratings will be maintained in the future. The State's credit rating, and any future revisions or withdrawal of a credit rating, could have a negative effect on the market price of the State's general obligation bonds, as well as notes and bonds issued by California's public authorities and local governments. Lower credit ratings make it more expensive for the State to raise revenue, and in some cases, could prevent the State from issuing general obligation bonds in the quantity otherwise desired. Further, downgrades can negatively impact the marketability and price of securities in the Fund's portfolio.

The foregoing information constitutes only a brief summary of some of the general factors that may impact certain issuers of municipal bonds and does not purport to be a complete or exhaustive description of all adverse conditions to which the issuers of municipal bonds held by the Fund are subject. Additionally, many factors, including national economic, social and environmental policies and conditions, which are not within the control of the issuers of the municipal bonds, could affect or could have an adverse impact on the financial condition of the issuers. The Fund is unable to predict whether or to what extent such factors or other factors may affect the issuers of the municipal securities, the market value or marketability of the municipal securities or the ability of the respective issuers of the municipal bonds acquired by the Fund to pay interest on or principal of the municipal securities. This information has not been independently verified. See Appendix A of this Prospectus for a further discussion of factors affecting municipal securities in California.

### **Inverse Floating Rate Securities Risk**

The Fund may invest in inverse floating rate securities. Typically, inverse floating rate securities represent beneficial interests in a special purpose trust (sometimes called a tender option bond trust) formed by a third party sponsor for the purpose of holding municipal bonds. See The Fund's Investments Municipal Securities Inverse Floating Rate Securities. In general, income on inverse floating rate securities will decrease when interest rates increase and increase when interest rates decrease. Investments in inverse floating rate securities may subject the Fund to the risks of reduced or eliminated interest payments and losses of principal.

The Fund may invest in inverse floating rate securities issued by special purpose trusts that have recourse to the Fund. In Nuveen Asset Management's discretion, the Fund may enter into a separate shortfall and forbearance agreement with the third party sponsor of a special

purpose trust. The Fund may enter into such recourse agreements (i) when the liquidity provider to the special purpose trust requires such an agreement because the level of leverage in the trust exceeds the level that the liquidity provider is willing to support absent such an agreement; and/or (ii) to seek to prevent the liquidity provider from collapsing the trust in the event that the municipal obligation held in the trust has declined in value. Such an agreement would require the Fund to

reimburse the third party sponsor of the trust, upon termination of the trust issuing the inverse floater, the difference between the liquidation value of the bonds held in the trust and the principal amount due to the holders of floating rate interests. In such instances, the Fund may be at risk of loss that exceeds its investment in the inverse floating rate securities.

Inverse floating rate securities may increase or decrease in value at a greater rate than the underlying interest rate, which effectively leverages the Fund's investment. As a result, the market value of such securities generally will be more volatile than that of fixed rate securities.

The Fund's investments in inverse floating rate securities issued by special purpose trusts that have recourse to the Fund may be highly leveraged. The structure and degree to which the Fund's inverse floating rate securities are highly leveraged will vary based upon a number of factors, including the size of the trust itself and the terms of the underlying municipal security. An inverse floating rate security generally is considered highly leveraged if the principal amount of the short-term floating rate interests issued by the related special purpose trust has a three to one gearing to the principal amount of the inverse floating rate securities owned by the trust. In the event of a significant decline in the value of an underlying security, the Fund may suffer losses in excess of the amount of its investment (up to an amount equal to the value of the municipal securities underlying the inverse floating rate securities) as a result of liquidating special purpose trusts or other collateral required to maintain the Fund's anticipated effective leverage ratio.

The Fund's investment in inverse floating rate securities will create effective leverage. Any effective leverage achieved through the Fund's investment in inverse floating rate securities will create an opportunity for increased Common Share net income and returns, but will also create the possibility that Common Share long-term returns will be diminished if the cost of leverage exceeds the return on the inverse floating rate securities purchased by the Fund.

The amount of fees paid to Nuveen Asset Management for investment advisory services will be higher if the Fund uses leverage because the fees will be calculated based on the Fund's managed assets this may create an incentive for Nuveen Asset Management to leverage the Fund. Managed assets means the total assets of the Fund, minus the sum of its accrued liabilities (other than liabilities incurred for the express purpose of creating effective leverage). Total assets for this purpose shall include assets attributable to the Fund's use of effective leverage (whether or not those assets are reflected in the Fund's financial statements for purposes of generally accepted accounting principles), such as, but not limited to, the portion of assets in special purpose trusts of which the Fund owns the inverse floater certificates that has been effectively financed by the trust's issuance of floating rate certificates.

There is no assurance that the Fund's strategy of investing in inverse floating rate securities will be successful.

Inverse floating rate securities have varying degrees of liquidity based, among other things, upon the liquidity of the underlying securities deposited in a special purpose trust. The market price of inverse floating rate securities is more volatile than the underlying securities due to leverage. The leverage attributable to such inverse floating rate securities may be called away on relatively short notice and therefore may be less permanent than more traditional forms of leverage. In certain circumstances, the likelihood of an increase in the volatility of net asset value and market price of the Common Shares may be greater for a fund (like the Fund) that relies primarily on inverse floating rate securities to achieve a desired effective leverage ratio. The Fund may be required to sell its inverse floating rate securities at less than favorable prices, or liquidate other Fund portfolio holdings in certain circumstances, including, but not limited to, the following:

If the Fund has a need for cash and the securities in a special purpose trust are not actively trading due to adverse market conditions;

If special purpose trust sponsors (as a collective group or individually) experience financial hardship and consequently seek to terminate their respective outstanding trusts; and

If the value of an underlying security declines significantly (to a level below the notional value of the floating rate securities issued by the trust) and if additional collateral has not been posted by the Fund.

### **Insurance Risk**

The Fund may purchase municipal securities that are secured by insurance, bank credit agreements or escrow accounts. The credit quality of the companies that provide such credit enhancements will affect the value of those securities. Certain significant providers of insurance for municipal securities have recently incurred significant losses as a result of exposure to sub-prime mortgages and other lower credit quality investments that have experienced recent defaults or otherwise suffered extreme credit deterioration. As a result, such losses have reduced the insurers' capital and called into question their continued ability to perform their obligations under such insurance if they are called upon to do so in the future. While an insured municipal security will typically be deemed to have the rating of its insurer, if the insurer of a municipal security suffers a downgrade in its credit rating or the market discounts the value of the insurance provided by the insurer, the rating of the underlying municipal security will be more relevant and the value of the municipal security would more closely, if not entirely, reflect such rating. In such a case, the value of insurance associated with a municipal security would decline and may not add any value. The insurance feature of a municipal security does not guarantee the full payment of principal and interest through the life of an insured obligation, the market value of the insured obligation or the net asset value of the Common Shares represented by such insured obligation.

### **Tax Risk**

To qualify for the favorable U.S. federal income tax treatment generally accorded to regulated investment companies, among other things, the Fund must derive in each taxable year at least 90% of its gross income from certain prescribed sources and satisfy a diversification test on a quarterly basis. If the Fund fails to satisfy the qualifying income or diversification requirements in any taxable year, the Fund may be eligible for relief provisions if the failures are due to reasonable cause and not willful neglect and if a penalty tax is paid with respect to each failure to satisfy the applicable requirements. Additionally, relief is provided for certain de minimis failures of the diversification requirements where the Fund corrects the failure within a specified period. In order to be eligible for the relief provisions with respect to a failure to meet the diversification requirements, the Fund may be required to dispose of certain assets. If these relief provisions were not available to the Fund and it were to fail to qualify for treatment as a regulated investment company for a taxable year, all of its taxable income (including its net capital gain) would be subject to tax at regular corporate rates without any deduction for distributions to shareholders, and such distributions would be taxable as ordinary dividends to the extent of the Fund's current and accumulated earnings and profits.

To qualify to pay exempt-interest dividends, which are treated as items of interest excludable from gross income for federal income tax purposes, at least 50% of the value of the total assets of the Fund must consist of obligations exempt from regular income tax as of the close of each quarter of the Fund's taxable year. If the proportion of taxable investments held by the Fund exceeds 50% of the Fund's total assets as of the close of any quarter of a taxable year, the Fund will not for that taxable year satisfy the general eligibility test that otherwise permits it to pay exempt-interest dividends.

The value of the Fund's investments and its net asset value may be adversely affected by changes in tax rates and policies. Because interest income from municipal securities is normally not subject to regular federal income taxation, the attractiveness of municipal securities in relation to other investment alternatives is affected by changes in federal income tax rates or changes in the tax-exempt status of interest income from municipal securities. Any proposed or actual changes in such rates or exempt status, therefore, can significantly affect the demand for and supply, liquidity and marketability of municipal securities. This could in turn affect the Fund's net asset value and ability to acquire and dispose of municipal securities at desirable yield and price levels. Additionally, the Fund is not a suitable investment for individual retirement accounts, for other tax-exempt or tax-deferred accounts or for investors who are not sensitive to the federal income tax consequences of their investments.

### **Taxability Risk**

The Fund invests in municipal securities in reliance at the time of purchase on an opinion of bond counsel to the issuer that the interest paid on those securities will be excludable from gross income for federal income tax purposes, and Nuveen Asset Management will not independently verify that opinion. Subsequent to the Fund's acquisition of such a municipal security, however, the security may be determined to pay, or to have paid, taxable income. As a result, the treatment of dividends previously paid or to be paid by the Fund as exempt-interest dividends could be adversely affected, subjecting the Fund's shareholders to increased federal income tax liabilities.

Distributions of ordinary taxable income (including any net short-term capital gain) will be taxable to shareholders as ordinary income (and not eligible for favorable taxation as qualified dividend income), and capital gain dividends will be taxable as long-term capital gains. See Tax Matters.

### **Borrowing Risks**

The Fund may borrow for temporary or emergency purposes, including to meet redemption requests, pay dividends, repurchase its shares, or clear portfolio transactions. Borrowing may exaggerate changes in the net asset value of the Fund's shares and may affect the Fund's net income. When the Fund borrows money, it must pay interest and other fees, which will reduce the fund's returns if such costs exceed the returns on the portfolio securities purchased or retained with such borrowings. Any such borrowings are intended to be temporary. However, under certain market conditions, including periods of low demand or decreased liquidity in the municipal bond market such borrowings might be outstanding for longer periods of time.

### **Inflation Risk**

Inflation risk is the risk that the value of assets or income from investment will be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the dividends paid to VRDP Shareholders can decline, and the real value of Common Shares and the distributions can decline. In addition, during any period of rising inflation, interest rates on borrowings would likely increase, which would tend to further reduce returns to Common Shareholders.

### **Sector and Industry Risk**

The Fund may invest up to 25% of its net assets in municipal securities in any one industry or in any one state of origin. In addition, subject to the concentration limits of the Fund's investment policies and guidelines, the Fund may invest a significant portion of its net assets in certain sectors of the municipal securities market, such as hospitals and other health care facilities, charter schools and other private educational facilities, special taxing districts and start-up utility districts, and private activity bonds including industrial development bonds on behalf of transportation companies such as airline companies, whose credit quality and performance may be more susceptible to economic, business, political, regulatory and other developments than other sectors of municipal issuers. If the Fund invests a significant portion of its net assets in the sectors noted above, the Fund's performance may be subject to additional risk and variability. To the extent that the Fund focuses its net assets in the hospital and healthcare facilities sector, for example, the Fund will be subject to risks associated with such sector, including adverse government regulation and reduction in reimbursement rates, as well as government approval of products and services and intense competition. Securities issued with respect to special taxing districts will be subject to various risks, including real-estate development related risks and taxpayer concentration risk. Further, the fees, special taxes or tax allocations and other revenues established to secure the obligations of securities issued with respect to special taxing districts are generally limited as to the rate or amount that may be levied or assessed and are not

subject to increase pursuant to rate covenants or municipal or corporate guarantees. Charter schools and other private educational facilities are subject to various risks, including the reversal of legislation authorizing or funding charter schools, the failure to renew or secure a charter, the failure of a funding entity to appropriate necessary funds and competition from alternatives such as

voucher programs. Issuers of municipal utility securities can be significantly affected by government regulation, financing difficulties, supply and demand of services or fuel and natural resource conservation. The transportation sector, including airports, airlines, ports and other transportation facilities, can be significantly affected by changes in the economy, fuel prices, labor relations, insurance costs and government regulation.

### **Special Risks Related to Certain Municipal Obligations**

The Fund may invest in municipal leases and certificates of participation in such leases. Municipal leases and certificates of participation involve special risks not normally associated with general obligations or revenue bonds. Leases and installment purchase or conditional sale contracts (which normally provide for title to the leased asset to pass eventually to the governmental issuer) have evolved as a means for governmental issuers to acquire property and equipment without meeting the constitutional and statutory requirements for the issuance of debt. The debt issuance limitations are deemed to be inapplicable because of the inclusion in many leases or contracts of non-appropriation clauses that relieve the governmental issuer of any obligation to make future payments under the lease or contract unless money is appropriated for such purpose by the appropriate legislative body on a yearly or other periodic basis. In addition, such leases or contracts may be subject to the temporary abatement of payments in the event the governmental issuer is prevented from maintaining occupancy of the leased premises or utilizing the leased equipment. Although the obligations may be secured by the leased equipment or facilities, the disposition of the property in the event of non-appropriation or foreclosure might prove difficult, time consuming and costly, and may result in a delay in recovering or the failure to fully recover the Fund's original investment. In the event of non-appropriation, the issuer would be in default and taking ownership of the assets may be a remedy available to the Fund, although the Fund does not anticipate that such a remedy would normally be pursued. To the extent that the Fund invests in unrated municipal leases or participates in such leases, the credit quality rating and risk of cancellation of such unrated leases will be monitored on an ongoing basis. Certificates of participation, which represent interests in unmanaged pools of municipal leases or installment contracts, involve the same risks as the underlying municipal leases. In addition, the Fund may be dependent upon the municipal authority issuing the certificates of participation to exercise remedies with respect to the underlying securities. Certificates of participation also entail a risk of default or bankruptcy, both of the issuer of the municipal lease and also the municipal agency issuing the certificate of participation.

### **Derivatives Risk, Including the Risk of Swaps**

The Fund's use of derivatives involves risks different from, and possibly greater than, the risks associated with investing directly in the investments underlying the derivatives. Whether the Fund's use of derivatives is successful will depend on, among other things, if NFALLC and Nuveen Asset Management correctly forecast market values, interest rates and other applicable factors. If NFALLC and Nuveen Asset Management incorrectly forecast these and other factors, the investment performance of the Fund will be unfavorably affected. In addition, the derivatives market is largely unregulated. It is possible that developments in the derivatives market could adversely affect the Fund's ability to successfully use derivative instruments.

The Fund may enter into debt-related derivatives instruments including credit swap default contracts and interest rate swaps. Like most derivative instruments, the use of swaps is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. In addition, the use of swaps requires an understanding by NFALLC and Nuveen Asset Management not only of the referenced asset, rate or index, but also of the swap itself. Because they are two-party contracts and because they may have terms of greater than seven days, swap agreements may be considered to be illiquid. Moreover, the Fund bears the risk of loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty. It is possible that developments in the swaps market, including potential government regulation, could adversely affect the Fund's ability to terminate existing swap agreements or to realize amounts to be received under such agreements. The derivatives market is subject to a changing regulatory environment. It is possible that regulatory or other developments in the derivatives market could adversely affect the Fund's ability to successfully use derivative instruments. See also, Risk Factors Counterparty Risk, Risk Factors Hedging Risk and the SAI.

### **Counterparty Risk**

Changes in the credit quality of the companies that serve as the Fund's counterparties with respect to derivatives, insured municipal securities or other transactions supported by another party's credit will affect the value of those instruments. Certain entities that have served as counterparties in the markets for these transactions have recently incurred significant financial hardships including bankruptcy and losses as a result of exposure to sub-prime mortgages and other lower quality credit investments that have experienced recent defaults or otherwise suffered extreme credit deterioration. As a result, such hardships have reduced these entities' capital and called into question their continued ability to perform their obligations under such transactions. By using such derivatives or other transactions, the Fund assumes the risk that its counterparties could experience similar financial hardships.

### **Hedging Risk**

The Fund's use of derivatives or other transactions to reduce risk involves costs and will be subject to NFALLC and Nuveen Asset Management's ability to predict correctly changes in the relationships of such hedge instruments to the Fund's portfolio holdings or other factors. No assurance can be given that Nuveen Asset Management's judgment in this respect will be correct. In addition, no assurance can be given that the Fund will enter into hedging or other transactions at times or under circumstances in which it may be advisable to do so.

### **Deflation Risk**

Deflation risk is the risk that prices throughout the economy decline over time, which may have an adverse effect on the market valuation of companies, their assets and revenues. In addition, deflation may have an adverse effect on the creditworthiness of issuers and may make issuer default more likely, which may result in a decline in the value of the Fund's portfolio.

### **Illiquid Securities Risk**

The Fund may invest in municipal securities and other instruments that, at the time of investment, are illiquid. Illiquid securities are securities that are not readily marketable and may include some restricted securities, which are securities that may not be resold to the public without an effective registration statement under the 1933 Act, if they are unregistered, may be sold only in a privately negotiated transaction or pursuant to an exemption from registration. Illiquid securities involve the risk that the securities will not be able to be sold at the time desired by the Fund or at prices approximating the value at which the Fund is carrying the securities on its books.

### **Call Risk**

If interest rates fall, it is possible that issuers of callable bonds with higher interest coupons will call (or prepay) their bonds before their maturity date. If a call were exercised by the issuer during a period of declining interest rates, the Fund is likely to replace such called security with a lower yielding security.

**Impact of Offering Methods Risk**

The issuance of Common Shares through the various methods described in the Prospectus may have an adverse effect on prices in the secondary market for the Fund's Common Shares by increasing the number of Common Shares available for sale. In addition, the Common Shares may be issued at a discount to the market price for such shares, which may put downward pressure on the market price for Common Shares of the Fund.

### **Certain Affiliations**

Certain broker-dealers may be considered to be affiliated persons of the Fund, NFALLC, TIAA and/or Nuveen Investments. Absent an exemption from the SEC or other regulatory relief, the Fund is generally precluded from effecting certain principal transactions with affiliated brokers, and its ability to purchase securities being underwritten by an affiliated broker or a syndicate including an affiliated broker, or to utilize affiliated brokers for agency transactions, is subject to restrictions. The Fund has not applied for and does not currently intend to apply for such relief. This could limit the Fund's ability to engage in securities transactions, purchase certain adjustable rate senior loans, if applicable, and take advantage of market opportunities. In addition, unless and until the underwriting syndicate is broken in connection with the initial public offering of the Common Shares, the Fund will be precluded from effecting principal transactions with brokers who are members of the syndicate.

### **Anti-Takeover Provisions**

The Fund's Declaration include provisions that could limit the ability of other entities or persons to acquire control of the Fund or convert the Fund to open-end status. These provisions could have the effect of depriving the Common Shareholders of opportunities to sell their Common Shares at a premium over the then current market price of the Common Shares. See Certain Provisions in the Declaration of Trust.

## **MANAGEMENT OF THE FUND**

### **Trustees and Officers**

The Board of Trustees is responsible for the management of the Fund, including supervision of the duties performed by NFALLC. The names and business addresses of the Trustees and officers of the Fund and their principal occupations and other affiliations during the past five years are set forth under Management of the Fund in the SAI.

### **Investment Adviser, Sub-Adviser and Portfolio Manager**

*Investment Adviser.* Nuveen Fund Advisors, LLC, the Fund's investment adviser, offers advisory and investment management services to a broad range of mutual fund and closed-end fund clients. NFALLC is responsible for the Fund's overall investment strategy and its implementation. NFALLC also is responsible for managing the Fund's business affairs and providing certain clerical, bookkeeping and other administrative services.

NFALLC, 333 West Wacker Drive, Chicago, Illinois 60606, a registered investment adviser, is a wholly owned subsidiary of Nuveen Investments. Founded in 1898, Nuveen Investments and its affiliates had approximately \$225 billion of assets under management as of December 31, 2015.

## Edgar Filing: NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND - Form 497

Eligible assets do not include assets attributable to investments in other Nuveen funds or assets in excess of \$2 billion added to the Nuveen fund complex in connection with NFALLC's assumption of the management of the former First American Funds effective January 1, 2011. As of February 29, 2016, the complex-level fee rate for the Fund was 0.1640%.

Nuveen Investments is a wholly-owned subsidiary of TIAA. TIAA is a national financial services organization with approximately \$854 billion in assets under management as of December 31, 2015, and is the leading provider of retirement services in the academic, research, medical and cultural fields. Nuveen Investments operates as a separate subsidiary within TIAA's asset management business.

*Sub-Adviser.* Nuveen Asset Management, LLC, 333 West Wacker Drive, Chicago, Illinois 60606, serves as the Fund’s sub-adviser pursuant to a sub-advisory agreement between NFALLC and Nuveen Asset Management. Nuveen Asset Management is a registered investment adviser, and a wholly-owned subsidiary of NFALLC. Nuveen Asset Management oversees day-to-day investment operations of the Fund.

*Portfolio Manager.* Nuveen Asset Management is responsible for the execution of specific investment strategies and day-to-day investment operations of the Fund. Nuveen Asset Management manages the funds using a team of analysts and portfolio managers that focuses on a specific group of funds. The day-to-day operation of the Fund and the execution of its specific investment strategies is the primary responsibility of Scott R. Romans, the designated portfolio manager of the Fund.

Scott R. Romans, PhD (the Portfolio Manager), Senior Vice President of Nuveen Asset Management, joined Nuveen Investments in 2000 as a senior analyst in the education sector. In 2003, he was assigned management responsibility for several closed- and open-ended municipal bond funds. Currently, he manages investments for 14 Nuveen-sponsored investment companies. He holds an undergraduate degree from the University of Pennsylvania and an MA and PhD from the University of Chicago.

Additional information about the Portfolio Manager’s compensation, other accounts managed by the Portfolio Manager and the Portfolio Manager’s ownership of securities in the Fund is provided in the SAI. The SAI is available free of charge by calling (800) 257-8787 or by visiting the Fund’s website at [www.nuveen.com](http://www.nuveen.com). The information contained in, or that can be accessed through, the Fund’s website is not part of this Prospectus or the SAI.

**Investment Management and Sub-Advisory Agreements**

*Investment Management Agreement.* Pursuant to an investment management agreement between NFALLC and the Fund (the Investment Management Agreement), the Fund has agreed to pay an annual management fee for the services and facilities provided by NFALLC, payable on a monthly basis, based on the sum of a fund-level fee and a complex-level fee, as described below.

**Fund-Level Fee.** The annual fund-level fee for the Fund, payable monthly, is calculated according to the following schedule:

Average Daily Managed Assets <sup>(1)</sup>	Fund-Level Fee Rate
For the first \$125 million	0.4500%
For the next \$125 million	0.4375%
For the next \$250 million	0.4250%
For the next \$500 million	0.4125%
For the next \$1 billion	0.4000%
For managed assets over \$2 billion	0.3750%

**Complex-Level Fee.** The annual complex-level fee for the Fund, payable monthly, is calculated according to the following schedule:

Complex-Level Managed Asset Breakpoint Level <sup>(1)</sup>	Effective Rate at
---	-------------------

---

	<u>Breakpoint Level</u>
\$55 billion	0.2000%
\$56 billion	0.1996%
\$57 billion	0.1989%
\$60 billion	0.1961%
\$63 billion	0.1931%

<u>Complex-Level Managed Asset Breakpoint Level<sup>(1)</sup></u>	<u>Effective Rate at Breakpoint Level</u>
\$66 billion	0.1900%
\$71 billion	0.1851%
\$76 billion	0.1806%
\$80 billion	0.1773%
\$91 billion	0.1691%
\$125 billion	0.1599%
\$200 billion	0.1505%
\$250 billion	0.1469%
\$300 billion	0.1445%

- (1) For the fund-level and complex-level fees, managed assets include closed-end fund assets managed by NFALLC that are attributable to certain types of leverage. For these purposes, leverage includes the funds' use of preferred stock and borrowings and certain investments in the residual interest certificates (also called inverse floating rate securities) in tender option bond (TOB) trusts, including the portion of assets held by a TOB trust that has been effectively financed by the trust's issuance of floating rate securities, subject to an agreement by NFALLC as to certain funds to limit the amount of such assets for determining managed assets in certain circumstances. The complex-level fee is calculated based upon the aggregate daily managed assets of all Nuveen funds that constitute eligible assets. Eligible assets do not include assets attributable to investments in other Nuveen funds or assets in excess of \$2 billion added to the Nuveen Fund complex in connection with NFALLC's assumption of the management of the former First American Funds effective January 1, 2011. As of February 29, 2016, the complex-level fee rate for the Fund was 0.1640%.

A discussion regarding the basis for the Board of Trustees' decision to renew the Investment Management Agreement for the Fund may be found in the Fund's semi-annual report to shareholders dated August 31 of each year.

In addition to the fee of NFALLC, the Fund pays all other costs and expenses of its operations, including compensation of its Trustees (other than those affiliated with NFALLC and Nuveen Asset Management), custodian, transfer agency and dividend disbursing expenses, legal fees, expenses of independent auditors, expenses of repurchasing shares, expenses associated with any borrowings, expenses of issuing any preferred shares, expenses of preparing, printing and distributing shareholder reports, notices, proxy statements and reports to governmental agencies, and taxes, if any. All fees and expenses are accrued daily and deducted before payment of dividends to investors.

*Sub-Advisory Agreement.* Pursuant to a sub-advisory agreement between NFALLC and Nuveen Asset Management (the Sub-Advisory Agreement), Nuveen Asset Management receives from NFALLC a management fee equal to 38.4615% of NFALLC's net management fee from the Fund. NFALLC and Nuveen Asset Management retain the right to reallocate investment advisory responsibilities and fees between themselves in the future.

A discussion regarding the basis for the Board of Trustees' decision to approve the Sub-Advisory Agreement for the Fund may be found in the Fund's semi-annual report to shareholders dated August 31 of each year.

#### NET ASSET VALUE

The Fund's net asset value per share is determined as of the close of regular session trading (normally 4:00 p.m., Eastern Time) on each day the NYSE is open for business. Net asset value is calculated by taking the market value of the Fund's total assets, including interest or dividends accrued but not yet collected, less all

liabilities, and dividing by the total number of shares outstanding. The result, rounded to the nearest cent, is the net asset value per share. All valuations are subject to review by the Fund's Board of Trustees or its delegate.

In determining net asset value, expenses are accrued and applied daily and securities and other assets for which market quotations are available are valued at market value. The prices of municipal bonds are provided by a pricing service approved by the Fund's Board of Trustees. When market price quotes are not readily available (which is usually the case for municipal securities), the pricing service, or, in the absence of a pricing service for a particular security, the Board of Trustees of the Fund, or its designee, may establish fair market value using a wide variety of market data including yields or prices of municipal bonds of comparable quality, type of issue, coupon, maturity and rating, market quotes or indications of value from securities dealers, evaluations of anticipated cash flows or collateral, general market conditions and other information and analysis, including the obligor's credit characteristics considered relevant by the pricing service or the Board of Trustees' designee. Exchange-listed securities are generally valued at the last sales price on the securities exchange on which such securities are primarily traded. Securities traded on a securities exchange for which there are no transactions on a given day or securities not listed on a securities exchange are valued at the mean of the closing bid and asked prices. Securities traded on Nasdaq are valued at the Nasdaq Official Closing Price. Temporary investments in securities that have variable rate and demand features qualifying them as short-term investments are valued at amortized cost, which approximates market value. See "Net Asset Value" in the SAI for more information.

## DISTRIBUTIONS

The Fund pays regular monthly distributions to Common Shareholders at a level rate (stated in terms of a fixed cents per Common Shares dividend rate) that reflects the past and projected performance of the Fund. Distributions can only be made from net investment income after paying any accrued dividends to VRDP Shareholders or other preferred shareholders if additional preferred shares are issued in the future or interest and required principal payments on borrowings.

The Fund's ability to maintain a level dividend rate will depend on a number of factors, including the rate at which dividends are payable on the VRDP Shares. The net income of the Fund includes all interest income accrued on portfolio assets less all expenses of the Fund. Expenses of the Fund are accrued each day. For each year, all or substantially all of the net investment income of the Fund will be distributed. At least annually, the Fund also intends to distribute substantially all of its net capital gain (which is the excess of net long-term capital gain over net short-term capital loss) and ordinary taxable income, if any, after paying any accrued dividends or making any liquidation payments to VRDP Shareholders and any interest and required principal payment on borrowings. Although it does not now intend to do so, the Board of Trustees may change the Fund's dividend policy and the amount or timing of the distributions, based on a number of factors, including the amount of the Fund's undistributed net investment income and historical and projected investment income and the amount of the expenses and dividend rates on outstanding preferred shares, including VRDP Shares, and expenses interest on borrowings.

The Fund might not distribute all or a portion of any net capital gain for a taxable year. If the Fund does not distribute all of its net capital gain for a taxable year, it will pay federal income tax on the retained gain. Each Common Shareholder of record as of the end of the Fund's taxable year will include in income for federal income tax purposes, as long-term capital gain, his or her share of the retained gain, will be deemed to have paid his or her proportionate share of tax paid by the Fund on such retained gain, and will be entitled to an income tax credit or refund for that share of the tax.

The Fund will treat the retained capital gains as a substitute for equivalent cash distributions. While not currently anticipated, if the Fund makes total distributions during a given calendar year in an amount that exceeds the Fund's net investment income and net capital gain for that calendar year, the excess would generally be treated by Common Shareholders as a return of capital for tax purposes. A return of capital reduces a shareholder's tax basis, which could result in higher taxes when the shareholder sells his or her shares. This may cause the shareholder to pay taxes even if he or she sells shares for less than the original price.

The Fund reserves the right to change its distribution policy and the basis for establishing the rate of its monthly distributions at any time.

### **DIVIDEND REINVESTMENT PLAN**

If your Common Shares are registered directly with the Fund or if you hold your Common Shares with a brokerage firm that participates in the Fund's Dividend Reinvestment Plan (the Plan), you may elect to have all dividends, including any capital gain dividends, on your Common Shares automatically reinvested by the Plan Agent (defined below) in additional Common Shares under the Plan. You may elect to participate in the Plan by contacting Nuveen Investor Services at (800) 257-8787. If you do not participate, you will receive all distributions in cash paid by check mailed directly to you or your brokerage firm by State Street Bank and Trust Company as dividend paying agent (the Plan Agent).

If you decide to participate in the Plan, the number of Common Shares you will receive will be determined as follows:

(1) If Common Shares are trading at or above net asset value at the time of valuation, the Fund will issue new shares at the then current market price;

(2) If Common Shares are trading below net asset value at the time of valuation, the Plan Agent will receive the dividend or distribution in cash and will purchase Common Shares in the open market, on the NYSE or elsewhere, for the participants' accounts. It is possible that the market price for the Common Shares may increase before the Plan Agent has completed its purchases. Therefore, the average purchase price per share paid by the Plan Agent may exceed the market price at the time of valuation, resulting in the purchase of fewer shares than if the dividend or distribution had been paid in Common Shares issued by the Fund. The Plan Agent will use all dividends and distributions received in cash to purchase Common Shares in the open market within 30 days of the valuation date. Interest will not be paid on any uninvested cash payments; or

(3) If the Plan Agent begins purchasing Fund shares on the open market while shares are trading below net asset value, but the Fund's shares subsequently trade at or above their net asset value before the Plan Agent is able to complete its purchases, the Plan Agent may cease open-market purchases and may invest the uninvested portion of the distribution in newly-issued Fund shares at a price equal to the greater of the shares' net asset value or 95% of the shares' market value.

You may withdraw from the Plan at any time by giving written notice to the Plan Agent. If you withdraw or the Plan is terminated, you will receive whole shares in your account under the Plan and you will receive a cash payment for any fraction of a share in your account. If you wish, the Plan Agent will sell your shares and send you the proceeds, minus brokerage commissions and a \$2.50 service fee.

The Plan Agent maintains all shareholders' accounts in the Plan and gives written confirmation of all transactions in the accounts, including information you may need for tax records. Upon a repurchase of your shares, the Fund (or its administrative agent) may be required to report to the IRS and furnish to you cost basis and holding period information for the Fund's shares purchased on or after January 1, 2012 (covered shares).

For shares of the Fund held in the Plan, you are permitted to elect from among several permitted cost basis methods. In the absence of an election, the Plan will use first-in first-out (FIFO) methodology for tracking and reporting your cost basis on covered shares as its default cost basis method. The cost basis method you use may not be changed with respect to a repurchase of shares after the settlement date of the repurchase. You should consult with your tax advisors to determine the best permitted cost basis method for your tax situation and to obtain

more information about how the new cost basis reporting rules apply to you.

Common Shares in your account will be held by the Plan Agent in non-certificated form. Any proxy you receive will include all Common Shares you have received under the Plan.

There is no brokerage charge for reinvestment of your dividends or distributions in Common Shares. However, all participants will pay a pro rata share of brokerage commissions incurred by the Plan Agent when it makes open market purchases.

Automatically reinvesting dividends and distributions does not mean that you do not have to pay income taxes due upon receiving dividends and distributions.

If you hold your Common Shares with a brokerage firm that does not participate in the Plan, you will not be able to participate in the Plan and any dividend reinvestment may be effected on different terms than those described above. Consult your financial advisor for more information.

The Fund reserves the right to amend or terminate the Plan if in the judgment of the Board of Trustees the change is warranted. There is no direct service charge to participants in the Plan; however, the Fund reserves the right to amend the Plan to include a service charge payable by the participants. Additional information about the Plan may be obtained by writing to State Street Bank and Trust Company, Attn: ComputerShare Nuveen Investments, P.O. Box 43071, Providence, Rhode Island 02940-3071 or by calling (800) 257-8787.

#### **PLAN OF DISTRIBUTION**

The Fund may sell the Common Shares offered under this Prospectus through

at-the-market transactions;

underwriting syndicates; and

privately negotiated transactions.

The Fund will bear the expenses of the offering, including but not limited to, the expenses of preparation of the Prospectus and SAI for the offering and the expense of counsel and auditors in connection with the offering.

#### **Distribution Through At-The-Market Transactions**

The Fund has entered into a distribution agreement with Nuveen Securities (the *Distribution Agreement*), which has been filed as an exhibit to the Registration Statement of which this Prospectus is a part. The summary of the *Distribution Agreement* contained herein is qualified by reference to the *Distribution Agreement*. Subject to the terms and conditions of the *Distribution Agreement*, the Fund may from time to time issue and sell its Common Shares through Nuveen Securities to certain broker-dealers which have entered into selected dealer agreements with Nuveen Securities. Currently, Nuveen Securities has entered into a selected dealer agreement (the *Selected Dealer Agreement*) with UBS pursuant to which UBS will be acting as Nuveen Securities' sub-placement agent with respect to at-the-market offerings of Common Shares. The *Selected Dealer Agreement* has been filed as an exhibit to the Registration Statement of which this Prospectus forms a part. The summary of the *Selected Dealer Agreement* contained herein is qualified by reference to the selected dealer agreement.

Common Shares will only be sold on such days as shall be agreed to by the Fund and Nuveen Securities. Common Shares will be sold at market prices, which shall be determined with reference to trades on the NYSE, subject to a minimum price to be established each day by the Fund. The minimum price on any day will not be less than the current net asset value per Common Share plus the per share amount of the commission to be paid to Nuveen Securities. The Fund and Nuveen Securities will suspend the sale of Common Shares if the per share price of the shares is less than the minimum price.

The Fund will compensate Nuveen Securities with respect to sales of the Common Shares at a commission rate of up to 1.0% of the gross proceeds of the sale of Common Shares. Nuveen Securities will compensate broker-dealers participating in the offering at a rate of up to 0.8% of the gross proceeds of the sale of Common Shares sold by that broker-dealer. Settlements of sales of Common Shares will occur on the third business day

following the date on which any such sales are made. In connection with the sale of the Common Shares on behalf of the Fund, Nuveen Securities may be deemed to be an underwriter within the meaning of the 1933 Act, and the compensation of Nuveen Securities may be deemed to be underwriting commissions or discounts. Unless otherwise indicated in a further Prospectus supplement, Nuveen Securities will act as underwriter on a reasonable efforts basis.

The offering of Common Shares pursuant to the Distribution Agreement will terminate upon the earlier of (i) the sale of all Common Shares subject thereto or (ii) termination of the Distribution Agreement. The Fund and Nuveen Securities each have the right to terminate the Distribution Agreement in its discretion at any time. The Fund currently intends to distribute the shares offered pursuant to this Prospectus primarily through at-the-market transactions, although from time to time it may also distribute shares through an underwriting syndicate or a privately negotiated transaction. To the extent shares are distributed other than through at-the-market transactions, the Fund will file a supplement to this Prospectus describing such transactions.

UBS, its affiliates and their respective employees hold or may hold in the future, directly or indirectly, investment interests in Nuveen Investments and its funds. The interests held by employees of UBS or its affiliates are not attributable to, and no investment discretion is held by, UBS or its affiliates.

As of May 2, 2016, the Fund has not sold any Common Shares in this offering.

The Fund's closing price on the NYSE on May 2, 2016 was \$16.27.

#### **Distribution Through Underwriting Syndicates**

The Fund from time to time may issue additional Common Shares through a syndicated secondary offering. In order to limit the impact on the market price of the Fund's Common Shares, underwriters will market and price the offering on an expedited basis (*e.g.*, overnight or similarly abbreviated offering period). The Fund will launch a syndicated offering on a day, and upon terms, mutually agreed upon between the Fund, Nuveen Securities, one of the Fund's underwriters, and the underwriting syndicate.

The Fund will offer its shares at a price equal to a specified discount of up to 5% from the closing market price of the Fund's Common Shares on the day prior to the offering date. The applicable discount will be negotiated by the Fund and Nuveen Securities in consultation with the underwriting syndicate on a transaction-by-transaction basis. The Fund will compensate the underwriting syndicate out of the proceeds of the offering based upon a sales load of up to 4% of the gross proceeds of the sale of Common Shares. The minimum net proceeds per share to the Fund will not be less than the greater of (i) the Fund's latest net asset value per share of Common Shares or (ii) 91% of the closing market price of the shares of the Fund's Common Shares on the day prior to the offering date.

#### **Distribution Through Privately Negotiated Transactions**

The Fund, through Nuveen Securities, from time to time may sell directly to, and solicit offers from, institutional and other sophisticated investors, who may be deemed to be underwriters as defined in the 1933 Act for any resale of Common Shares.

## Edgar Filing: NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND - Form 497

The terms of such privately negotiated transactions will be subject to the discretion of the management of the Fund. In determining whether to sell Common Shares through a privately negotiated transaction, the Fund will consider relevant factors including, but not limited to, the attractiveness of obtaining additional funds through the sale of Common Shares, the purchase price to apply to any such sale of Common Shares and the person seeking to purchase the Common Shares.

Common Shares issued by the Fund through privately negotiated transactions will be issued at a price equal to the greater of (i) the net asset value per share of the Fund's Common Shares or (ii) at a discount ranging from

0% to 5% of the average daily closing market price of the Fund's Common Shares at the close of business on the two business days preceding the date upon which Common Shares are sold pursuant to the privately negotiated transaction. The applicable discount will be determined by the Fund on a transaction-by-transaction basis.

The principal business address of Nuveen Securities is 333 West Wacker Drive, Chicago, Illinois 60606.

## DESCRIPTION OF SHARES

### Common Shares

The Declaration authorizes the issuance of an unlimited number of Common Shares. The Common Shares being offered have a par value of \$0.01 per share and, subject to the rights of holders of preferred shares, if issued, and borrowings, if incurred have equal rights to the payment of dividends and the distribution of assets upon liquidation. The Common Shares being offered will, when issued, be fully paid and, subject to matters discussed in Certain Provisions in the Declaration of Trust, non-assessable, and will have no pre-emptive or conversion rights or rights to cumulative voting. Each whole Common Share has one vote with respect to matters upon which a shareholder vote is required, and each fractional share shall be entitled to a proportional fractional vote consistent with the requirements of the 1940 Act and the rules promulgated thereunder, and will vote together as a single class. Whenever the fund incurs borrowings and/or preferred shares are outstanding, Common Shareholders will not be entitled to receive any cash distributions from the Fund unless all interest on such borrowings has been paid and all accrued dividends on preferred shares have been paid, unless asset coverage (as defined in the 1940 Act) with respect to any borrowings would be at least 300% after giving effect to the distributions and asset coverage (as defined in the 1940 Act) with respect to preferred shares would be at least 200% after giving effect to the distributions. See Preferred Shares below.

The Common Shares are listed on the NYSE and trade under the ticker symbol NAC. The Fund intends to hold annual meetings of shareholders so long as the Common Shares are listed on a national securities exchange and such meetings are required as a condition to such listing. The Fund will not issue share certificates.

Unlike open-end funds, closed-end funds like the Fund do not provide daily redemptions. Rather, if a shareholder determines to buy additional Common Shares or sell shares already held, the shareholder may conveniently do so by trading on the exchange through a broker or otherwise. Shares of closed-end investment companies may frequently trade on an exchange at prices lower than net asset value. Shares of closed-end investment companies like the Fund have during some periods traded at prices higher than net asset value and have during other periods traded at prices lower than net asset value.

Because the market value of the Common Shares may be influenced by such factors as distribution levels (which are in turn affected by expenses), call protection, dividend stability, portfolio credit quality, net asset value, relative demand for and supply of such shares in the market, general market and economic conditions, and other factors beyond the control of the Fund, the Fund cannot assure you that Common Shares will trade at a price equal to or higher than net asset value in the future. The Common Shares are designed primarily for long-term investors, and investors in the Common Shares should not view the Fund as a vehicle for trading purposes.

### Preferred Shares

## Edgar Filing: NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND - Form 497

The Fund's Declaration authorizes the issuance of an unlimited number of preferred shares, par value \$.01 per share, in one or more classes or series, with rights as determined by the Board of Trustees without the approval of holders of Common Shares, out of which the Executive Committee of the Board of Trustees, acting pursuant to authority delegated to it by the full Board of Trustees, has designated 1,362, 910, 498, 1,056, 1,589 and 1,581 preferred shares as Series 1, 2, 3, 4, 5 and 6 Variable Rate Demand Preferred ( VRDP ) Shares, respectively. The Fund has an aggregate of 6,996 VRDP Shares outstanding as of February 29, 2016. The Fund's Board of Trustees has authorized the offering of auction rate preferred shares ( ARPS ) in the past. As of October 5, 2011,

all of the Fund's outstanding ARPS had been redeemed. The decision to issue additional preferred shares is subject to market conditions and to the Board of Trustees' belief that leveraging the Fund's capital structure through the issuance of preferred shares is likely to achieve the benefits to the Common Shareholders described in the Prospectus.

*Limited Issuance of Preferred Shares.* Under the 1940 Act, the Fund could issue preferred shares with an aggregate liquidation value of up to one-half (50%) of the value of the Fund's total net assets, including any liabilities associated with borrowings, measured immediately after issuance of the preferred shares. Liquidation value means the original purchase price of the shares being liquidated plus any accrued and unpaid dividends. In addition, the Fund is not permitted to declare any cash dividend or other distribution on its Common Shares unless the liquidation value of the preferred shares is less than one-half (50%) of the value of the Fund's total net assets (determined after deducting the amount of such dividend or distribution) immediately after the distribution. The Fund intends to purchase or redeem preferred shares, if necessary, to keep that percentage below 50%.

*Distribution Preference.* Preferred shares, including VRDP Shares, have complete priority over Common Shares as to distribution of assets.

*Liquidation Preference.* In the event of any voluntary or involuntary liquidation, dissolution or winding up of the affairs of the Fund, holders of preferred shares, including VRDP Shares would be entitled to receive a preferential liquidating distribution (expected to equal the original purchase price per share plus accumulated and unpaid dividends thereon, whether or not earned or declared) before any distribution of assets is made to Common Shareholders.

*Voting Rights.* Preferred shares, including VRDP Shares, are required to be voting shares and to have equal voting rights with Common Shares. Except as otherwise indicated in this Prospectus or the SAI and except as otherwise required by applicable law, preferred shares would vote together with Common Shareholders as a single class.

Holders of preferred shares, including VRDP Shares, voting as a separate class, will be entitled to elect two of the Fund's Trustees (following the establishment of the Fund by an initial director, the Declaration provides for a total of no less than two and no more than 12 Trustees). The remaining Trustees will be elected by Common Shareholders and holders of preferred shares, voting together as a single class. In the unlikely event that two full years of accrued dividends are unpaid on the preferred shares, including VRDP Shares, the holders of all outstanding preferred shares, including VRDP Shares, voting as a separate class, will be entitled to elect a majority of the Fund's Trustees until all dividends in arrears have been paid or declared and set apart for payment. In order for the Fund to take certain actions or enter into certain transactions, a separate class vote of holders of preferred shares would be required, in addition to the single class vote of the holders of preferred shares, and Common Shares. See Certain Provisions in the Declaration of Trust and the SAI under Description of Shares Preferred Shares Voting Rights.

*Redemption, Purchase and Sale of Preferred Shares.* The terms of any preferred share offering, including VRDP Shares, provides that they may be redeemed by the issuer at certain times, in whole or in part, at the original purchase price per share plus accumulated dividends. Any redemption or purchase of preferred shares, including VRDP Shares, by the Fund will reduce the leverage applicable to Common Shares, while any issuance of shares by the Fund would increase such leverage.

The Fund applied for and obtained ratings for its VRDP Shares from two NRSROs. As long as VRDP Shares are outstanding, the composition of the Fund's portfolio would reflect guidelines established by such NRSROs. Based on previous guidelines established by such NRSROs for the securities of other issuers, the Fund anticipates that the guidelines may impose asset coverage or portfolio composition requirements that are more stringent than those imposed on the Fund by the 1940 Act. However, at this time, no assurance can be given as to the nature or extent of the guidelines that may be imposed in connection with obtaining a rating of any VRDP Shares.

### CERTAIN PROVISIONS IN THE DECLARATION OF TRUST

Under Massachusetts law, shareholders could, under certain circumstances, be held personally liable for the obligations of the Fund. However, the Declaration contains an express disclaimer of shareholder liability for debts or obligations of the Fund and requires that notice of such limited liability be given in each agreement, obligation or instrument entered into or executed by the Fund or the trustees. The Declaration further provides for indemnification out of the assets and property of the Fund for all loss and expense of any shareholder held personally liable for the obligations of the Fund. Thus, the risk of a shareholder incurring financial loss on account of shareholder liability is limited to circumstances in which the Fund would be unable to meet its obligations. The Fund believes that the likelihood of such circumstances is remote.

The Declaration includes provisions that could limit the ability of other entities or persons to acquire control of the Fund or to convert the Fund to open-end status. Specifically, the Declaration requires a vote by holders of at least two-thirds of the common shares and preferred shares, including VRDP Shares, voting together as a single class, except as described below, to authorize (1) a conversion of the Fund from a closed-end to an open-end investment company, (2) a merger or consolidation of the Fund, or a series or class of the Fund, with any corporation, association, trust or other organization or a reorganization of the Fund, or a series or class of the Fund, (3) a sale, lease or transfer of all or substantially all of the Fund's assets (other than in the regular course of the Fund's investment activities), (4) in certain circumstances, a termination of the Fund, or a series or class of the Fund or (5) removal of trustees by shareholders (except at the end of a trustee's term), and then only for cause, unless, with respect to (1) through (4), such transaction has already been authorized by the affirmative vote of two-thirds of the total number of trustees fixed in accordance with the Declaration or the By-Laws, in which case the affirmative vote of the holders of at least a majority of the Fund's common shares and preferred shares, including VRDP Shares, outstanding at the time, voting together as a single class, is required, provided, however, that where only a particular class or series is affected (or, in the case of removing a trustee, when the trustee has been elected by only one class), the required vote only by the applicable class or series will be required. Approval of shareholders is not required, however, for any transaction, whether deemed a merger, consolidation, reorganization or otherwise whereby the Fund issues shares in connection with the acquisition of assets (including those subject to liabilities) from any other investment company or similar entity. In the case of the conversion of the Fund to an open-end investment company, or in the case of any of the foregoing transactions constituting a plan of reorganization which adversely affects the holders of preferred shares, including VRDP Shares, the action in question will also require the affirmative vote of the holders of at least two-thirds of the Fund's preferred shares, including VRDP Shares, outstanding at the time, voting as a separate class, or, if such action has been authorized by the affirmative vote of two-thirds of the total number of trustees fixed in accordance with the Declaration or the By-Laws, the affirmative vote of the holders of at least a majority of the Fund's preferred shares, including VRDP Shares, outstanding at the time, voting as a separate class. None of the foregoing provisions may be amended except by the vote of at least two-thirds of the common shares and preferred shares, including VRDP Shares, voting together as a single class. The votes required to approve the conversion of the Fund from a closed-end to an open-end investment company or to approve transactions constituting a plan of reorganization which adversely affects the holders of preferred shares, including VRDP Shares, are higher than those required by the 1940 Act. The Board of Trustees believes that the provisions of the Declaration relating to such higher votes are in the best interest of the Fund and its shareholders. Note, the Fund's staggered Board could delay for up to two years the replacement of a majority of the Board of Trustees. Reference should be made to the Declaration on file with the SEC for the full text of these provisions.

The Declaration provides that the obligations of the Fund are not binding upon the trustees of the Fund individually, but only upon the assets and property of the Fund, and that the trustees shall not be liable for errors of judgment or mistakes of fact or law. Nothing in the Declaration, however, protects a trustee against any liability to which he would otherwise be subject by reason of willful misfeasance, bad faith, gross negligence or reckless disregard of the duties involved in the conduct of his office.

### **REPURCHASE OF FUND SHARES; CONVERSION TO OPEN-END FUND**

The Fund is a closed-end investment company and as such its shareholders will not have the right to cause the Fund to redeem their shares. Instead, the Common Shares will trade in the open market at a price that will be a function of several factors, including dividend levels (which are in turn affected by expenses), net asset value, call protection, dividend stability, portfolio credit quality, relative demand for and supply of such shares in the market, general market and economic conditions and other factors. Because shares of closed-end investment companies may frequently trade at prices lower than net asset value, the Fund's Board of Trustees has currently determined that, at least annually, it will consider action that might be taken to reduce or eliminate any material discount from net asset value in respect of Common Shares, which may include the repurchase of such shares in the open market or in private transactions, the making of a tender offer for such shares at net asset value, or the conversion of the Fund to an open-end investment company. The Fund cannot assure you that its Board of Trustees will decide to take any of these actions, or that share repurchases or tender offers will actually reduce market discount.

If the Fund converted to an open-end investment company, it would be required to redeem all preferred shares, including VRDP Shares then outstanding (requiring in turn that it liquidate a portion of its investment portfolio), and the Common Shares would no longer be listed on the NYSE. In contrast to a closed-end investment company, shareholders of an open-end investment company may require the company to redeem their shares at any time (except in certain circumstances as authorized by or under the 1940 Act) at their net asset value, less any redemption charge that is in effect at the time of redemption. See the SAI under "Certain Provisions in the Declaration of Trust" for a discussion of the voting requirements applicable to the conversion of the Fund to an open-end investment company.

Before deciding whether to take any action if the Common Shares trade below net asset value, the Board of Trustees would consider all relevant factors, including the extent and duration of the discount, the liquidity of the Fund's portfolio, the impact of any action that might be taken on the Fund or its shareholders, and market considerations. Based on these considerations, even if the Fund's shares should trade at a discount, the Board of Trustees may determine that, in the interest of the Fund and its shareholders, no action should be taken. See the SAI under "Repurchase of Fund Shares; Conversion to Open-End Fund" for a further discussion of possible action to reduce or eliminate such discount to net asset value.

### **TAX MATTERS**

The following information is meant as a general summary for U.S. shareholders. Please see the SAI for additional information. Investors should rely on their own tax adviser for advice about the particular federal, state and local tax consequences to them of investing in the Fund.

The Fund has elected and intends to qualify each year to be treated as a regulated investment company ( "RIC" ) under the Internal Revenue Code of 1986, as amended (the "Code" ). In order to qualify for treatment as a RIC, the Fund must satisfy certain requirements regarding the sources of its income, the diversification of its assets and the distribution of its income. As a RIC, the Fund is not expected to be subject to federal income tax. The Fund primarily invests in municipal securities (as defined above) issued by states, cities and local authorities and certain possessions and territories of the United States (such as Puerto Rico or Guam) or municipal securities whose income is otherwise exempt from regular federal income taxes. Substantially all of the Fund's dividends paid to you are expected to qualify as "exempt-interest dividends." A shareholder treats an exempt-interest dividend as interest on state and local bonds exempt from regular federal income tax. Federal income tax law imposes an alternative minimum tax with respect to corporations, individuals, trust and estates. Interest on certain municipal securities, such as certain private activity bonds, is included as an item of tax preference in determining the amount of a taxpayer's alternative minimum taxable income. If the Fund receives income from such municipal securities, a portion of the dividends paid by the Fund, although exempt from regular federal income tax, will be taxable to shareholders whose tax liabilities are determined under the federal alternative

minimum tax. The Fund will annually provide a report indicating the percentage of the Fund's income attributable to municipal securities and the percentage includable in federal alternative minimum taxable income. Corporations are subject to special rules in calculating their federal alternative minimum taxable income with respect to interest from municipal securities.

In addition to exempt-interest dividends, the Fund may also distribute to its shareholders amounts that are treated as long-term capital gain or ordinary income (which may include short-term capital gains). These distributions are generally subject to regular federal income tax, whether or not reinvested in additional shares. Capital gain distributions are generally taxable at rates applicable to long-term capital gains regardless of how long a shareholder has held its shares. Long-term capital gains are taxable to noncorporate taxpayers at rates of up to 20%. The Fund does not expect that any part of its distributions to shareholders from its investments will qualify for the dividends-received deduction available to corporate shareholders or as qualified dividend income, which is taxable to noncorporate shareholders at reduced maximum U.S. federal income tax rates.

A 3.8% Medicare contribution tax generally applies to all or a portion of the net investment income of a shareholder who is an individual and not a nonresident alien for federal income tax purposes and who has adjusted gross income (subject to certain adjustments) that exceeds a threshold amount (\$250,000 if married filing jointly or if considered a surviving spouse for federal income tax purposes, \$125,000 if married filing separately, and \$200,000 in other cases). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts. For these purposes, interest, dividends and certain capital gains are generally taken into account in computing a shareholder's net investment income, but exempt-interest dividends are not taken into account.

As a RIC, the Fund will not be subject to federal income tax in any taxable year provided that it meets certain distribution requirements. As described in Distributions above, the Fund might not distribute some (or all) of its net capital gain. If the Fund retains any net capital gain or taxable net investment income, it will be subject to tax at regular corporate rates on the amount retained. If the Fund retains any net capital gain, it may designate the retained amount as undistributed capital gains in a notice to its shareholders who, if subject to federal income tax on long-term capital gains, (i) will be required to include in income for federal income tax purposes, as long-term capital gain, their shares of such undistributed amount; (ii) will be deemed to have paid their proportionate shares of the tax paid by the Fund on such undistributed amount and will be entitled to credit that amount of tax against their federal income tax liabilities, if any; and (iii) will be entitled to claim refunds to the extent the credit exceeds such liabilities. For federal income tax purposes, the tax basis of shares owned by a shareholder of the Fund will be increased by an amount equal to the difference between the amount of undistributed capital gains included in the shareholder's gross income and the tax deemed paid by the shareholder.

Dividends declared by the Fund in October, November or December, payable to shareholders of record in such a month and paid during the following January will be treated as having been received by shareholders in the year the distributions were declared.

Each shareholder will receive an annual statement summarizing the shareholder's dividend and capital gains distributions.

The repurchase, sale or exchange of Common Shares normally will result in capital gain or loss to holders of Common Shares who hold their shares as capital assets. Generally a shareholder's gain or loss will be long-term capital gain or loss if the shares have been held for more than one year even though the increase in value in such Common Shares may be at least partly attributable to tax-exempt interest income. Present law taxes both long-term and short-term capital gains of corporations at the rates applicable to ordinary income. For noncorporate taxpayers, however, long-term capital gains are currently taxed at rates of up to 20%. Short-term capital gains and other ordinary income are taxed to noncorporate taxpayers at ordinary income rates. If a shareholder sells or otherwise disposes of Common Shares before holding them for six months, any loss on the sale or disposition will be treated as a long-term capital loss to the extent of any amounts treated as distributions to the Common Shareholder of long-term capital gain (including any amount credited to the Common Shareholder as

undistributed capital gain). Any loss realized by Common Shareholder on the disposition of Common Shares held 6 months or less is disallowed to the extent of the amount of exempt-interest dividends received by a shareholder with respect to Common Shares. Any loss realized on a sale or exchange of shares of the Fund will be disallowed to the extent those shares of the Fund are replaced by substantially identical shares of the Fund (including shares acquired by reason of participation in the Plan) within a period of 61 days beginning 30 days before and ending 30 days after the date of disposition of the original shares, or to the extent the shareholder enters into a contract or option to repurchase shares within such period. In that event, the basis of the replacement shares of the Fund will be adjusted to reflect the disallowed loss.

Any interest on indebtedness incurred or continued to purchase or carry the Fund's shares to which exempt-interest dividends are allocated is not deductible. Under certain applicable rules, the purchase or ownership of shares may be considered to have been made with borrowed funds even though such funds are not directly used for the purchase or ownership of the shares. In addition, if you receive social security or certain railroad retirement benefits, you may be subject to U.S. federal income tax on a portion of such benefits as a result of receiving investment income, including exempt-interest dividends and other distributions paid by the Fund.

The Fund may be required to withhold (as backup withholding) U.S. federal income tax from distributions (including exempt-interest dividends) and repurchase proceeds payable to a shareholder if the shareholder fails to provide the Fund with his or her correct taxpayer identification number or to make required certifications, or if the shareholder has been notified by the IRS that he or she is subject to backup withholding. The backup withholding rate is 28%. Backup withholding is not an additional tax; rather, it is a way in which the IRS ensures it will collect taxes otherwise due. Any amounts withheld may be credited against a shareholder's U.S. federal income tax liability.

#### **California Tax Matters**

The Fund's regular monthly dividends will not be subject to California personal income tax to the extent they are paid out of income earned on obligations that, when held by individuals, pay interest that is exempt from taxation by California under California law (*e.g.*, obligations of California and its political subdivisions) or federal law, so long as at the close of each quarter of the Fund's taxable year at least 50% of the value of the Fund's total assets consists of such obligations and the Fund designates such tax-exempt distributions pursuant to certain written notice requirements to its shareholders. The portion of the Fund's monthly dividends that is attributable to income other than as described in the preceding sentence will be subject to the California income tax. The Fund expects to earn no or only a minimal amount of such non-exempt income. If you are an individual California resident, you will be subject to California personal income tax to the extent the Fund distributes any realized capital gains, or if you sell or exchange shares and realize a capital gain on the transaction.

#### **Other State and Local Tax Matters**

While exempt-interest dividends are exempt from regular federal and California income taxes, they may not be exempt from other state or local income or other taxes. Some states exempt from state income tax that portion of any exempt-interest dividend that is derived from interest a regulated investment company receives on its holdings of securities of that state and its political subdivisions and instrumentalities. Therefore, the Fund will report annually to its shareholders the percentage of interest income the Fund earned during the preceding year on tax-exempt obligations and the Fund will indicate, on a state-by-state basis, the source of this income. Shareholders are advised to consult with their own tax advisors for more detailed information concerning California tax matters or the tax laws of their state and locality of residence. Please refer to the SAI for more detailed information.

**CUSTODIAN AND TRANSFER AGENT**

Edgar Filing: NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND - Form 497

The custodian of the assets of the Fund is State Street Bank and Trust Company, One Lincoln Street, Boston, Massachusetts 02111 ( Custodian ).  
The Custodian performs custodial, fund accounting and portfolio

accounting services. The Fund's transfer, shareholder services and dividend paying agent is also State Street Bank and Trust Company (Transfer Agent). The Transfer Agent is located at 250 Royall Street, Canton, Massachusetts 02021.

#### **INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

KPMG LLP (KPMG), an independent registered public accounting firm, provides auditing services to the Fund. The principal business address of KPMG is 200 East Randolph, Chicago, Illinois, 60601.

#### **LEGAL OPINION**

Certain legal matters in connection with the Common Shares will be passed upon for the Fund by Morgan, Lewis & Bockius LLP, Washington, DC.

#### **AVAILABLE INFORMATION**

The Fund is subject to the informational requirements of the Securities Exchange Act of 1934, as amended (the 1934 Act) and the 1940 Act and is required to file reports, proxy statements and other information with the SEC. These documents can be inspected and copied for a fee at the SEC's public reference room, 100 F Street, NE, Washington, DC 20549-0102, and Northeast Regional Office, Woolworth Building, 233 Broadway, New York, New York 10013-2409. Reports, proxy statements, and other information about the Fund can be inspected at the offices of the NYSE.

This Prospectus does not contain all of the information in the Fund's Registration Statement, including amendments, exhibits, and schedules. Statements in this Prospectus about the contents of any contract or other document are not necessarily complete and in each instance reference is made to the copy of the contract or other document filed as an exhibit to the Registration Statement, each such statement being qualified in all respects by this reference.

Additional information about the Fund and Common Shares can be found in the Fund's Registration Statement (including amendments, exhibits, and schedules) on Form N-2 filed with the SEC. The SEC maintains a web site (<http://www.sec.gov>) that contains the Fund's Registration Statement, other documents incorporated by reference, and other information the Fund has filed electronically with the SEC, including proxy statements and reports filed under the 1934 Act.

## **APPENDIX A: FACTORS AFFECTING MUNICIPAL SECURITIES IN CALIFORNIA**

The following information constitutes only a brief summary of some of the general factors that may impact certain issuers of municipal bonds and does not purport to be a complete or exhaustive description of all adverse conditions to which the issuers of municipal bonds held by the Fund are subject. Additionally, many factors, including national economic, social and environmental policies and conditions, which are not within the control of the issuers of the municipal bonds, could affect or could have an adverse impact on the financial condition of the issuers. The Fund is unable to predict whether or to what extent such factors or other factors may affect the issuers of the municipal securities, the market value or marketability of the municipal securities or the ability of the respective issuers of the municipal bonds acquired by the Fund to pay interest on or principal of the municipal securities. This information has not been independently verified.

The Fund invests a high proportion of its assets in California municipal securities. The payment of interest on and preservation of principal in these securities are dependent upon the continuing ability of California issuers and/or obligors of state, municipal and public authority debt obligations to meet their obligations thereunder. In addition to general economic pressures, certain California constitutional amendments, legislative measures, executive orders, administrative regulations and voter initiatives could adversely affect a California issuer's ability to raise revenues to meet its financial obligations.

### **Special Risk Considerations Relating to California Municipal Securities**

As described in the Prospectus, under normal circumstances, the Fund will invest at least 80 percent of its Managed Assets in municipal securities and other related investments the income from which is exempt from regular federal and California income tax. The Fund seeks to achieve its investment objectives by investing in tax-exempt California municipal securities that the Sub-Adviser believes are underrated and undervalued or that represent municipal market sectors that are undervalued. The specific California municipal securities in which the Fund will invest will change from time to time. The Fund is therefore susceptible to political, economic, regulatory or other factors affecting issuers of California municipal securities.

The following information constitutes only a brief summary of a number of the complex factors which may impact issuers of California municipal securities and does not purport to be a complete or exhaustive description of all adverse conditions to which issuers of California municipal securities may be subject. Such information is derived from official statements utilized in connection with the issuance of California municipal securities, as well as from other publicly available documents. Such an official statement, together with any updates or supplements thereto, generally may be obtained upon request to the Treasurer's office of the State of California. Such information has not been independently verified by the Fund and the Fund assumes no responsibility for the completeness or accuracy of such information. The summary below does not include all of the information pertaining to the budget, receipts and disbursements of the State of California that would ordinarily be included in various public documents issued thereby, such as an official statement prepared in connection with the issuance of general obligation bonds of the State of California. Additionally, many factors, including national, economic, social and environmental policies and conditions, which are not within the control of such issuers, could have an adverse impact on the financial condition of such issuers. The Fund cannot predict whether or to what extent such factors or other factors may affect the issuers of California municipal securities, the market value or marketability of such securities or the ability of the respective issuers of such securities acquired by the Fund to pay interest on or principal of such securities. The creditworthiness of obligations issued by local California issuers may be unrelated to the creditworthiness of obligations issued by the State of California, and there is no assurance on the part of the State of California to make payments on such local obligations. There may be specific factors that are applicable in connection with investment in the obligations of particular issuers located within the State of California, and it is possible the Fund will invest in obligations of particular issuers as to which such specific factors are applicable. However, the information set forth below is intended only as a general summary and not as a discussion of any specific factors that may affect any particular issuer of California municipal securities.

*General Economic Conditions*

The State of California's economy, the largest among the 50 states and one of the largest and most diverse in the world, has major components in high technology, trade, entertainment, government, manufacturing, tourism, construction and services. The relative proportion of the various components of the State's economy closely resembles the make-up of the national economy. The California economy continues to benefit from broad-based growth.

The U.S. economy is in its seventh year of expansion from the recession that officially ended in 2009. Strengthening demand is driving the current U.S. expansion, and this has had positive implications for state and local budgets. There are still risks to the economy. Economic expansions do not last forever; in the post-war period, the average expansion length has been almost 5 years and the longest expansion was 10 years. As of April 2016, the current expansion has lasted close to 7 years, and it would be an historical anomaly for the U.S. not to see another recession before 2020.

California's real GDP increased by 2.8 percent in 2014, and totaled \$2.3 trillion at current prices, keeping California as the eighth largest economy in the world. California has added jobs at a faster rate than the nation since 2012, and its economy is expected to continue making solid progress. The unemployment rate has fallen, even though long-term unemployment (those unemployed for 27 weeks or more) remains elevated. California's unemployment rate was 5.4 percent (seasonally adjusted) in March 2016, compared to 5.0 percent nationally. Industry employment in California is forecasted to expand 2.2 percent and 1.5 percent in 2016 and 2017, respectively, while personal income is projected to grow by 5.5 percent in 2016 and 5.2 percent in 2017.

Most individual sectors of the State economy have experienced solid growth, with the exception of the agricultural sector, which has had modest growth. At 2.3 percent of the total State economy, declines in the agricultural sector due to drought are expected to be offset by growth in other sectors. Growth above 5 percent is forecasted in 2016 and 2017 as a tighter labor market induces rising wages for more workers. Housing prices have risen faster than overall inflation, particularly in the San Francisco area, and are expected to keep inflation somewhat higher than the nation. Valuations of technology stocks have also been rising much faster than overall economic growth, contributing to rising wage pressures for high-skilled workers. Many of these workers are concentrated in urban areas with limited growth in housing supply, increasing competition for housing and raising housing prices. Increases in wages are likely more concentrated among high-income taxpayers who pay higher marginal tax rates. For the 2013 tax year, the top 1 percent of income earners paid over 45 percent of personal income taxes in California.

Despite the recent significant budgetary improvements, there remain a number of risks that threaten the State's fiscal condition, including the significant unfunded liabilities of the two main State retirement systems, the California Public Employees' Retirement System (CalPERS) and the California State Teachers' Retirement System (CalSTRS). In recent years, California has committed to significant increases in annual payments to these systems to reduce the unfunded liabilities, and California also has significant unfunded liability with respect to other post-employment benefits. There can be no assurances that the State will not face fiscal stress and cash pressures again, or that other changes in the State or national economies will not materially adversely affect the financial condition of the State. In particular, the current drought is one of the most severe in California's history, and a continuation of the drought conditions in 2016 would be expected to impact the economy.

*State of California Government*

The State of California's Constitution provides for three separate branches of government: the legislative, the judicial and the executive. The Constitution guarantees the electorate the right to make basic decisions, including amending the Constitution and local government charters. In addition, the State of California's voters may directly influence the State of California's government through the initiative, referendum and recall processes.

### *Local Governments*

The primary units of local government in California are the 58 counties, which range in population from approximately 1,200 in Alpine County to approximately 10 million in Los Angeles County. Counties are responsible for the provision of many basic services, including indigent health care, welfare, jails, and public safety in unincorporated areas. There are also 482 incorporated cities in California and thousands of special districts formed for education, utilities, and other services. Spending and revenues collected by the State or by local governments has shifted over the past decades.

The fiscal condition of local governments has been constrained since Proposition 13, which added Article XIII A to the State Constitution, was approved by California voters in 1978. Proposition 13 reduced and limited the future growth of property taxes and limited the ability of local governments to impose special taxes (those devoted to a specific purpose) without two-thirds voter approval. Proposition 218, another constitutional amendment enacted by initiative in 1996, further limited the ability of local governments to raise taxes, fees, and other exactions. Counties, in particular, have had fewer options to raise revenues than many other local government entities, while they have been required to maintain many services.

In the aftermath of Proposition 13, the State provided aid to local governments from the General Fund to make up some of the loss of property tax moneys, including assuming principal responsibility for funding K-12 schools and community colleges. During the recession of the early 1990s, the Legislature reduced the post-Proposition 13 aid to local government entities other than K-12 schools and community colleges by requiring cities and counties to transfer some of their property tax revenues to school districts. However, the Legislature also provided additional funding sources, such as sales taxes, and reduced certain mandates for local services funded by cities and counties.

The 2004 Budget Act, related legislation and the enactment of Proposition 1A in 2004 dramatically changed the State-local fiscal relationship. These constitutional and statutory changes implemented an agreement negotiated between the Governor and local government officials (the state-local agreement ) in connection with the 2004 Budget Act.

As part of the state-local agreement, voters at the November 2004 election approved Proposition 1A ( Proposition 1A of 2004 ). Proposition 1A of 2004 amended the State Constitution to, among other things, reduce the Legislature's authority over local government revenue sources by placing restrictions on the State's access to local governments' property, sales, and vehicle license fees ( VLF ) revenues as of November 3, 2004. This proposition permitted the State to borrow from local government funds. Proposition 22, adopted on November 2, 2010, supersedes Proposition 1A of 2004 and completely prohibits any future borrowing by the State from local government funds, and generally prohibits the Legislature from making changes in local government funding sources. Allocation of local transportation funds cannot be changed without an extensive process.

The 2011 Budget Act included a major realignment of public safety programs from the State to local governments. The realignment was designed to move program and fiscal responsibility to the level of government that can best provide the service, eliminate duplication of effort, generate savings and increase flexibility.

Proposition 30, approved by voters in November 2012, placed into the State Constitution the current statutory provisions transferring 1.0625 percent of the State sales tax to local governments to fund the realignment program for many services including housing criminal offenders.

### *State of California Finances*

The moneys of the State of California are segregated into the General Fund and over 1,000 other funds, including special, bond and other funds. The General Fund consists of revenues received by the State of

California Treasury and is not required by law to be credited to any fund and earnings from the investment of State of California moneys not allocable to another fund. The General Fund is the principal operating fund for the majority of governmental activities and is the depository of most of the major revenue sources of the State of California.

The following is a summary of the State of California's major revenue sources:

*Personal Income Tax.* The California personal income tax is closely modeled after the federal income tax law. It is imposed on net taxable income (gross income less exclusions and deductions), with rates ranging from 1 to 12.3 percent. In addition, a 1 percent surcharge is imposed on taxable income above \$1 million and proceeds from such tax are dedicated to the Mental Health Services Fund. The personal income tax is adjusted annually by the change in the consumer price index to prevent taxpayers from being pushed into a higher tax bracket without a real increase in income. Personal, dependent, and other credits are allowed against the gross tax liability. Taxpayers may be subject to an alternative minimum tax (AMT), which is much like the federal AMT.

Taxes on capital gains realizations, which are largely linked to stock market performance, can add a significant dimension of volatility to personal income tax receipts. Forecasting capital gains is extremely difficult, as the forecasts can change rapidly during a year due to abrupt changes in asset markets and the overall economy. Capital gains tax receipts accounted for 9 percent of General Fund revenues and transfers in fiscal year 2007-08, but dropped below 5 percent in fiscal year 2008-09, and below 4 percent in fiscal year 2009-10. However, the 2016-17 proposed budget projects that capital gains are estimated to be over 11 percent of General Fund revenues and transfers in fiscal year 2015-16, and are projected to be over 10 percent in fiscal year 2016-17.

*Sales Tax.* The sales tax is imposed upon retailers for the privilege of selling tangible personal property in California. Most retail sales and leases are subject to the tax. However, exemptions have been provided for certain essentials such as food for home consumption, prescription drugs, gas delivered through mains and electricity. Other exemptions provide relief for a variety of sales ranging from custom computer software to aircraft. Effective January 1, 2016, the base State and local sales tax was 7.50 percent. Certain cities and counties have increased the sales tax percentage in their jurisdiction above the base amount.

*Corporation Tax.* The State of California's corporate tax revenue is derived from franchise tax, corporate income tax, additional taxes on banks and other financial corporations, an AMT similar to the federal AMT and a tax on the profits of Sub-Chapter S corporations.

*Insurance Tax.* The majority of insurance written in the State of California, subject to certain exceptions, is subject to a 2.35 percent gross premium tax.

*Other Taxes.* Other sources of General Fund revenue include inheritance and gift taxes, cigarette taxes, alcoholic beverage taxes, horse racing license fees and trailer coach license fees.

#### *State of California Budget Process*

The State of California's fiscal year begins on July 1st and ends on June 30th of the following year. Under the State of California Constitution, money may be drawn from the Treasury only through an appropriation made by law. The primary source of the annual expenditure is the annual Budget Act as approved by the Legislature and signed by the Governor. The annual budget is proposed by the Governor by January 10 of each

Edgar Filing: NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND - Form 497

year for the next fiscal year (the Governor's Budget). State of California law requires the annual proposed Governor's Budget to provide for projected revenues equal to or in excess of projected expenditures for the ensuing fiscal year. Following the submission of the Governor's Budget, the Legislature takes up the proposal. During late spring, usually in May, the Department of Finance submits revised revenue and expenditure estimates (known as

the May Revision) for both the current and budget years to the Legislature. The Budget Act, which follows the May Revision, must be approved by a majority vote of each House of the Legislature.

Appropriations also may be included in legislation other than the Budget Act. With limited exceptions, bills containing General Fund appropriations must be approved by a two-thirds majority vote in each House of the Legislature and be signed by the Governor. Continuing appropriations, available without regard to fiscal year, may also be provided by statute or the State of California's Constitution.

The Governor may reduce or eliminate specific line items in the Budget Act or any other appropriations bill without vetoing the entire bill. Such individual line-item vetoes are subject to override by a two-thirds majority vote of each House of the Legislature.

The Balanced Budget Amendment (Proposition 58, approved by the voters in 2004) requires the State of California to enact a balanced budget, establishes a special reserve in the General Fund, restricts future borrowings to cover budget deficits, and provides for mid-year budget adjustments if the budget falls out of balance. The Legislature may not pass a budget bill in which General Fund expenditures exceed estimated General Fund revenues and fund balances at the time of passage and as set forth in the budget bill. As a result of the requirements of Proposition 58, the State of California would, in some cases, have to take more immediate actions to correct budgetary shortfalls. For example, if, after passage of the Budget Act, the Governor determines that the State is facing substantial revenue shortfalls or spending deficiencies, the Governor is authorized to declare a fiscal emergency and propose legislation to address the emergency. The Legislature would be called in to special session to address this proposal. If the Legislature fails to send legislation to the Governor to address the fiscal emergency within 45 days, it would be prohibited from acting on any other bills or adjourning until fiscal legislation is passed. Such fiscal emergencies were declared in 2008, 2009, 2010, and 2011, and the Legislature was called into various special sessions to address the budget shortfalls. Proposition 58 also prohibits certain future borrowings to cover budget deficits. These restrictions apply to general obligation bonds, revenue bonds and certain other forms of long-term borrowings, but do not apply to certain other types of borrowing, such as (i) short-term borrowing to cover cash shortfalls in the General Fund (including revenue anticipation notes or revenue anticipation warrants currently used by the State), or (ii) inter-fund borrowings.

In addition to Proposition 58, a number of other laws and constitutional amendments have been enacted over the years, often through voter initiatives, which have made it more difficult to raise the State of California's taxes, have restricted the use of the State of California's General Fund or special fund revenues, or have otherwise limited the Legislature and Governor's discretion in enacting budgets. Examples of constraints on the budget process include Proposition 13 (requiring a two-thirds vote in each House of the Legislature to change State of California taxes enacted for the purpose of increasing revenues collected), Proposition 98 (requiring a minimum percentage of General Fund revenues be spent on local education), Proposition 49 (requiring expanded State of California funding for before and after school programs), Proposition 10 (raising taxes on tobacco products but mandating the expenditure of such revenues), Proposition 63 (imposing a 1 percent tax surcharge on taxpayers with annual taxable income of more than \$1 million in order to fund mental health services and limiting the Legislature or Governor from redirecting funds now used for mental health services), and Proposition 22 (restricting the ability of the State to use or borrow money from local governments and moneys dedicated to transportation financing, and prohibiting the use of excise taxes on motor vehicle fuels to offset General Fund costs of debt service on certain transportation bonds), Proposition 30 (transferring 1.0625 percent of the State sales tax to local governments to fund realignment), and Proposition 39 (requiring corporations to base their State tax liability on sales in California). Proposition 25 was intended to end delays in the adoption of the annual budget by changing the legislative vote necessary to pass the budget bill from two-thirds to majority vote and requiring the legislators to forgo their pay if the Legislature fails to pass the budget bill on time. Proposition 2, passed in November 2014, changes the way the State pays down debt and saves money in reserves.

#### *State of California Budget*

Budget deficits in California have recurred from year-to-year for over a decade prior to the 2013-2014 fiscal year. Weakness in the State economy caused State tax revenues to decline precipitously, resulting in large

budget gaps and cash shortfalls. In addition to the recent economic downturn, California's chronic budget crises are also a result of State spending commitments funded by temporary spikes in revenues. Once revenues return to their normal trend or drop precipitously, these commitments cannot be sustained, and dramatic cuts to programs and/or tax increases sometimes have been required. Budgets also have repeatedly been balanced using, at least in part, unrealized assumptions and one-time or temporary measures.

California's budget challenges were exacerbated by a wall of debt, which was an unprecedented level of debt, deferrals and budgetary obligations that have accumulated for over a decade. At the end of the 2010-11 fiscal year, wall of debt obligations had reached \$34.7 billion. In addition, the State faces hundreds of billions of dollars in other long-term cost pressures, debts and liabilities. As a result, the State is paying for the expenses of the past and will do so for the foreseeable future.

As the State's economy has recovered since the last recession, the State has paid down some of its debt and has addressed some long-standing problems such as implementing a plan to reduce shortfalls in State pension plans and commitments to improve the State's water system. The State remains dependent on personal income tax, which drops precipitously in times of recession.

The passage of Proposition 2 in November 2014 gives the State a means to seek to avoid repeating the prior boom-and-bust cycles. Under Proposition 2, spikes in capital gains are used, in part, to save money for the next recession through the establishment of a rainy day fund and to pay down the State's debts and liabilities. The Proposition also sets requirements as to how money in the rainy day fund is used and requires that the State provide multi-year budget forecasts to help better manage the State's longer term finances. Nonetheless, maintaining a balanced budget for the long-term will continue to be an ongoing challenge.

The discussion below of the fiscal year 2015-16 budget and Governor Brown's proposed budget for 2016-17 is based on estimates and projections of revenues and expenditures by the Governor's administration, and must not be construed as statements of fact. These estimates and projections are based upon various assumptions, which may be affected by numerous factors, including future economic conditions in California and the nation, and there can be no assurance that the estimates will be achieved.

#### *Fiscal Year 2015-2016 State Budget*

The 2015-16 budget was enacted on June 24, 2015 (the 2015 Budget), and assumes that there will be continued moderate expansion of the economy. The 2015 Budget assumes \$115 billion in revenues, which is a 3.3 percent increase over the prior fiscal year. As of February 2016, revenues were greater than the estimates at the time that the 2015 Budget was enacted by \$1.38 billion or 2.0 percent. Despite stronger revenues compared to the prior year, the budget remains precariously balanced.

General Fund spending is projected to increase by 0.8 percent compared to the prior fiscal year. The 2015 Budget increases spending on education, health care, in-home supportive services, workforce developments, debt assistance and the judiciary. The 2015 Budget establishes the State's first Earned Income Tax Credit to help the State's poorest working families. When enacted, the 2015 Budget projected total General Fund expenditures of \$115.4 billion; at the time of the proposed 2016-17 budget, expenditures were projected to be \$116.1 billion, a 0.6 percent increase.

The 2015 Budget projects that the State's rainy day fund will have a total balance of \$3.5 billion by the end of the 2015-16 fiscal year. The budget includes paying down \$1.9 billion in debts from Proposition 2 funds. The State, pursuant to the 2015 Budget, will also repay the remaining \$1 billion in deferrals to schools and community colleges and make the last payment on the Economic Recovery Bonds that were used to cover budget deficits from as far back as 2002. In addition, the 2015 Budget reduces outstanding mandated liabilities owed to schools and

Edgar Filing: NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND - Form 497

community colleges by \$3.8 billion. The State continues to have hundreds of billions of dollars in liabilities for deferred maintenance on its aging infrastructure and for retiree health care benefits for state employees and various pension benefits. The 2015 Budget includes \$125 million to address deferred maintenance and establishes a trust fund for the prefunding of retiree health benefits.

Despite the recent budgetary improvements, there remain a number of risks that threaten the State's fiscal condition, including the need to repay billions of dollars of obligations that were deferred to balance budgets during the economic downturn. The State continues to need to address unfunded retiree benefits, which the California Legislative Analyst's Office (LAO) states are the last of the State's large unaddressed liabilities, and, in the long run, would significantly lower the State's expenses, affording future generations more flexibility in public budgeting. In addition, California's revenues (particularly the personal income tax) can be volatile and correlate to overall economic conditions. Sudden tax revenue declines may return with little warning.

#### *Fiscal Year 2016-2017 Proposed State Budget*

Governor Brown released his fiscal year 2016-17 budget proposal on January 7, 2016 and the May revision on May 13, 2016 (the May Revision). The May Revision assumes a continued moderate expansion of the economy, while also acknowledging that maintaining a balanced budget will be an ongoing challenge. The May Revision forecasts an annual shortfall between spending and revenues of \$4 billion by 2019-20, which is likely to be largely the result of the expiration of the temporary taxes imposed under Proposition 30. However, in November 2016, voters will elect on whether to extend the Proposition 30 income tax rates for another 12 years.

General Fund revenues and transfers for fiscal year 2016-17 are projected at \$120.1 billion; which is approximately \$3 billion more than the estimated \$117 billion in General Fund revenues and transfers for fiscal year 2015-16.

Compared to the initial budget proposal, the May Revision estimates a decrease in tax revenue by \$1.9 billion, reflecting lower April income tax receipts and lower sales tax receipts than expected. General Fund expenditures for fiscal year 2016-17 are projected at \$122.2 billion, an increase of approximately \$6.6 billion compared to an estimated \$115.6 billion in General Fund expenditures for fiscal year 2015-16.

The State has an estimated \$232 billion in long-term costs, debts and liabilities, \$228 billion of which are retirement-related costs of State and University of California employees. Proposition 2 provides a dedicated funding source to help address these liabilities from the 2015 to the 2029 fiscal years, but that funding alone will not eliminate these liabilities.

The May Revision prioritizes funding for education, infrastructure and sustainability. Pursuant to the May Revision, the State will continue to make contributions to its rainy day fund and discretionary reserves. However, projected contributions to the rainy day fund have been reduced since the January budget proposal as a result of reduced tax revenues. The LAO believes that cultivating a large budget reserve is prudent and key to weathering the next recession with minimal disruption to public programs.

Despite the recent budgetary improvements, there remain a number of risks that threaten the State's fiscal condition, including the need to repay billions of dollars of obligations that were deferred to balance budgets during the economic downturn. Legislation was passed that will eventually raise the State's minimum wage to \$15 per hour. The May Revision anticipates that this will raise General Fund costs by an estimated \$39 million in 2016-17 and \$3.4 billion in the longer term, though the actual economic impact is uncertain. In addition, California's revenues (particularly the personal income tax) can be volatile and correlate to overall economic conditions. Sudden tax revenue declines may return with little warning. The budget proposal also faces potential pressure from the State's legislature to increase spending.

#### **Municipal Bankruptcies**

## Edgar Filing: NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND - Form 497

Municipalities in California may declare bankruptcy, which increases the risk of default on municipal bonds. Moody's believes that the risk of default on municipal bonds has increased in California due to the State's real estate market, difficulties in raising revenue and little oversight of local governments by the State. According to the LAO, except for K-12 education, the State does not have a significant role in monitoring the fiscal health of localities. Instead, the responsibility for reviewing local government fiscal conditions rests with local communities.

Federal bankruptcy law permits local governments – counties, cities, special districts, school districts and community college districts – to file for relief under Chapter 9 provided that their state government authorizes this action. California provides its local governments with broad authority to file Chapter 9, but generally requires cities, counties and special districts to engage in a “neutral evaluation” process prior to filing for Chapter 9 relief. When a local government files for Chapter 9, the locality receives an “automatic stay” that stops the collection activity by creditors and protects the locality from litigation. A court must determine if the locality is eligible for Chapter 9 protection, and, if so, the locality must develop a plan of adjustment. Creditors and the court must approve the plan adjustment. Once the court approves the plan of adjustment, it creates a new contractual agreement between the locality and its creditors.

Three California localities made Chapter 9 bankruptcy filings in 2012, which occurred just months after another California locality had completed its three-year Chapter 9 process. The use of Chapter 9 bankruptcy filings by local governments could have an impact on creditors and parties with whom they contract, including bondholders. In addition, bankruptcies at the local level could impact the State’s overall fiscal outlook.

### **Ratings**

The State’s fiscal situation increases the risk of investing in California municipal securities, including the risk of potential issuer default, and also heightens the risk that the prices of California municipal securities, and the Fund’s net asset value, will experience greater volatility.

Fitch, S&P and Moody’s assign ratings to California’s long-term general obligation bonds. The ratings of Fitch, S&P and Moody’s represent their opinions as to the quality of the municipal bonds they rate. The ratings are general and not absolute standards of quality. Consequently, municipal bonds with the same maturity, coupon and rating may have different yields while obligations with the same maturity and coupon with different ratings may have the same yields. In 2009 and early 2010, California’s general obligation bond ratings were significantly downgraded by Moody’s, S&P and Fitch. In July 2009, Moody’s downgraded the State’s general obligation credit rating to “Baa1” and Fitch downgraded the credit rating to “BBB-”. In January 2010, S&P downgraded the credit rating to “A-”. The State’s credit ratings had not been that low since 2003 and 2004. Since that time, the credit ratings have been increasing, though the State has one of the lowest bond ratings of any state. In June 2014, Moody’s raised the State’s general obligation rating to “Aa3”; in July 2015, S&P raised the State’s general obligation credit rating to “AA-”, the highest rating from S&P since 2000; and Fitch raised the rating to “A+” in February 2015. However, these upward revisions reflected a recalibration of certain public finance ratings and did not reflect a change in credit quality of the issuer or issuers.

There can be no assurance that such ratings will be maintained in the future. The State’s credit rating, and any future revisions or withdrawal of a credit rating, could have a negative effect on the market price of the State’s general obligation bonds, as well as notes and bonds issued by California’s public authorities and local governments. Lower credit ratings make it more expensive for the State to raise revenue, and in some cases, could prevent the State from issuing general obligation bonds in the quantity otherwise desired. Further, downgrades can negatively impact the marketability and price of securities in the Fund’s portfolio.

Recently, some municipal issuers either have been unable to issue bonds or access the market to sell their issues or, if able to access the market, have issued bonds at much higher rates. Should the State or municipalities fail to sell bonds when and at the rates projected, the State could experience significantly increased costs in the General Fund and a weakened overall cash position in the current fiscal year.

### *State of California Indebtedness and Other Obligations*

## Edgar Filing: NUVEEN CALIFORNIA DIVIDEND ADVANTAGE MUNICIPAL FUND - Form 497

The State of California Treasurer is responsible for the sale of debt obligations of the State and its various authorities and agencies. The State uses General Fund revenues to pay debt-service costs for principal and interest payments on two types of bonds used primarily to fund infrastructure – voter-approved general obligations bonds and lease-revenue bonds approved by the Legislature. The debt service ratio ( DSR ) is the ratio of annual General Fund debt-service costs to annual General Fund revenues and transfers, and is often used

as an indicator of the State's debt burden. The higher the DSR and the more rapidly it rises, the more closely bond raters, financial analysts and investors tend to look at the State's debt practices. Also, higher debt-service expenses limit the use of revenue for other programs.

Based on estimates in the Governor's proposed 2016-17 Budget and bond issuance estimates from the State Treasurer's office, the DSR is estimated to equal approximately 6.6 percent in fiscal year 2015-16 and 6.5 percent in fiscal year 2016-17. These amounts do not reflect adjustments for receipts from the U.S. Treasury for the State's current outstanding general obligation and lease-revenue Build America Bonds (BABs) or the availability of any special funds that may be used to pay a portion of the debt service to help reduce General Fund costs. Including the estimated offsets reduces the DSR to 5.4 percent in fiscal year 2015-16 and 5.4 percent in fiscal year 2016-17. The actual DSR will depend on a variety of factors, including actual debt issuance (which may include additional issuance approved in the future by the Legislature and, for general obligation bonds, the voters), actual interest rates, debt service structure, and actual General Fund revenues and transfers.

As of January 1, 2016, the State had approximately \$86.0 billion of outstanding general obligation bonds and lease revenue bonds payable principally from the State's General Fund or from lease payments paid from the operating budget of the respective lessees, which operating budgets are primarily, but not exclusively, derived from the General Fund. As of January 1, 2016, there were approximately \$29.3 billion of authorized and unissued long-term voter-approved general obligation bonds, which when issued will be payable principally from the General Fund and approximately \$3.6 billion of authorized and unissued lease-revenue bonds.

Current State of California debt obligations include:

*General Obligation Bonds.* The State of California's Constitution prohibits the creation of general obligation indebtedness of California unless a bond measure is approved by a majority of the electorate voting at a general election or direct primary. General obligation bond acts provide a continuing appropriation from the General Fund of amounts for the payment of debt service on the related general obligation bonds. Under the State of California's Constitution, the appropriation to pay debt service on the general obligation bonds cannot be repealed until the principal and interest on the bonds have been paid. Certain general obligation bond programs, called self-liquidating bonds, receive revenues from specified sources so that moneys from the General Fund do not pay debt service, but the General Fund will pay the debt service if the specified revenue source is not sufficient. The principal self-liquidating general obligation bond program is the veteran general obligation bonds, supported by mortgage repayments from housing loans made to military veterans. General obligation bonds are typically authorized for infrastructure and other capital improvements at the State and local level. Pursuant to the State Constitution, general obligation bonds cannot be used to finance State budget deficits.

As of January 1, 2016, the State had outstanding approximately \$76 billion aggregate principal amount of long-term general obligation bonds, of which approximately \$75.3 billion were payable primarily from the State's General Fund, and approximately \$728.7 million were self-liquidating bonds payable first from other special revenue funds. As of January 1, 2016, there were unused voter authorizations for the future issuance of approximately \$29.8 billion long-term general obligation bonds, some of which may first be issued as commercial paper notes. Of this unissued amount, approximately \$467.6 million is for general obligation bonds payable first from other revenue sources.

An initiative measure to authorize \$9 billion of general obligation bonds for K-12 school construction has received sufficient signatures to be placed on the November 2016 ballot. Under State law, proponents of this measure may remove it from the ballot up to the end of June 2016.

*Variable Rate General Obligations Bonds.* The general obligation bond law permits the State to issue as variable rate indebtedness up to 20 percent of the aggregate amount of long-term general obligation bonds outstanding. As of January 1, 2016, the State had outstanding a \$3.6 billion principal amount of variable rate general obligation bonds, representing about 4.8 percent of the State's total outstanding general obligation bonds. If the \$1.1 billion of variable rate general obligation bonds having mandatory tender dates cannot be remarketed on their respective scheduled mandatory tender dates, there is no default but the interest rate on the series of such

bonds not remarketed on such date would be increased in installments thereafter until such bonds can be remarketed or refunded. The State is obligated to redeem, on the applicable purchase date, any weekly and daily variable rate demand obligations ( VRDOs ) tendered for purchase if there is a failure to pay the related purchase price of such VRDOs on such purchase date from proceeds of the remarketing thereof, or from liquidity support related to such VRDOs. The State has not entered into any interest rate hedging contracts in relation to any of its variable rate general obligation bonds.

*General Obligation Commercial Paper Program.* Pursuant to legislation enacted in 1995, voter-approved general obligation indebtedness may be issued either as long-term bonds or, for some but not all bond acts, as commercial paper notes. Commercial paper notes may be renewed or refunded by the issuance of long-term bonds. It is currently the State's policy to use commercial paper notes to provide flexibility for bond programs, such as to provide interim funding of voter-approved projects and to facilitate refunding of variable rate bonds into fixed rate bonds. Commercial paper notes are not included in the calculation of permitted variable rate indebtedness described above under Variable Rate General Obligation Bonds and are not included in the figures provided above under General Obligation Bonds. A total of \$2.2 billion of commercial paper is now authorized under agreements with various banks, including an agreement for direct purchase of up to \$500 million of commercial paper notes by a bank. A total of \$1.2 billion of commercial paper was outstanding as of January 1, 2016.

*Bank Arrangements.* In connection with the letters of credit or other credit facilities obtained by the State in connection with VRDOs and the commercial paper program ( CP ), the State has entered into a number of reimbursement agreements or other credit agreements with a variety of financial institutions. These agreements include various representations and covenants of the State, and the terms by which the State would be required to pay or repay any obligations thereunder. To the extent that VRDOs or CP offered to the public cannot be remarketed over an extended period and the applicable financial institution is obligated to purchase VRDOs or CP, interest payable by the State pursuant to the reimbursement agreement or credit agreement would generally increase over current market levels relating to the VRDOs or CP, and the principal repayment period would generally be shorter than the period otherwise applicable to the VRDOs. On occasion, the State's variable rate obligations have not been remarketed, resulting in draws on the applicable credit facilities. In addition, after the occurrence of certain events of default as specified in a credit agreement, payment of the related VRDOs may be further accelerated and payment of related CP, as applicable, may also be accelerated and interest payable by the State on such VRDOs or CP could increase significantly.

*Lease-Revenue Obligations.* The State builds and acquires facilities through the issuance of lease-revenue obligations, in addition to general obligation bonds. Under these arrangements, the State of California Public Works Board ( SPWB ), another State or local agency or a joint powers authority issues bonds to pay for the acquisition or construction of facilities, such as office buildings, university buildings, courthouses or correctional institutions. These facilities are leased to State agencies, the California State University ( CSU ) or the Judicial Council under a long-term lease that provides the source of payment of the debt service on the lease-revenue bonds. Under applicable court decisions, such lease arrangements do not constitute the creation of indebtedness within the meaning of State Constitutional provisions that require voter approval. The State had approximately \$10.8 billion in lease-revenue obligations outstanding as of January 1, 2016. The SPWB, which is authorized to sell lease-revenue bonds, had approximately \$3.6 billion of authorized and unissued bonds as of January 1, 2016.

The CSU proposes to restructure substantially all of the approximately \$987.5 million of existing CSU lease revenue bonds which financed the CSU facilities by issuing its general revenue bonds to defease the SPWB bonds.

*Non-Recourse Debt.* Certain State agencies and authorities issue revenue obligations for which the General Fund has no liability. Revenue bonds represent obligations payable from the State's revenue-producing enterprises and projects and conduit obligations payable only from revenues paid by private users of facilities financed by the revenue bonds. In each case, such revenue bonds are not payable from the General Fund. The

enterprises and projects include transportation projects, various public works projects, public and private educational facilities, housing, health facilities and pollution control facilities. State agencies and authorities had approximately \$58.6 billion aggregate principal amount of revenue bonds and notes which are non-recourse to the General Fund outstanding as of December 31, 2015.

An initiative Constitutional amendment related to the issuance and sale of State revenue bonds has received sufficient signatures to be placed on the November 2016 ballot. Under State law, proponents of the measure may remove it from the ballot up to the end of June 2016. If approved by a majority of voters in November 2016, this measure would require statewide voter approval before any revenue bonds could be issued or sold by the State, a State agency or a joint agency created by or including the State for any single project having a cost of \$2 billion or more. As many of the specific aspects of this initiative measure are not yet clear, including, for instance, what constitutes a single project, what exactly constitutes a revenue bond, and how the \$2 billion threshold is calculated, it is impossible to predict what impact this measure, if approved, would have on the State's ability to use revenue bonds to finance large infrastructure or other projects.

*Build America Bonds.* In February 2009, the U.S. Congress enacted certain new municipal bond provisions as part of the American Recovery and Reinvestment Act (the ARRA), which allows municipal issuers such as the State to issue Build America Bonds (BABs) for new infrastructure investments. BABs are bonds whose interest is subject to federal income tax, but the U.S. Treasury will repay to the State an amount equal to 35 percent of the interest cost on any BABs issued during 2009 and 2010. The BAB subsidy payments from general obligation bonds are General Fund revenues to the State, while subsidy payments for lease-revenue bonds are deposited into a fund which is made available to the SPWB for any lawful purpose. In neither instance are the subsidy payments specifically pledged to repayment of the BABs to which they relate. The cash subsidy payment with respect to the BABs, to which the State is entitled, is treated by the Internal Revenue Service as a refund of a tax credit and such refund may be offset by the Department of Treasury by any liability of the State payable to the federal government. None of the State's BAB subsidy payments to date have been reduced because of such an offset.

Between April 2009 and December 2010, the State issued approximately \$13.5 billion of BAB general obligation bonds and the SPWB issued \$551 million of BAB lease-revenue bonds. The remaining aggregate amount of the subsidy payments expected to be received from fiscal year 2015-16 through the maturity of these bonds (usually, 20 to 30 years) is approximately \$7.5 billion for the general obligations BABs and \$191.8 million for the SPWB lease-revenue BABs. Federal legislative proposals have been made from time to time which would provide for further issuance of BABs, but none have been enacted into law.

Pursuant to federal budget legislation, beginning in March 1, 2013, and continuing until U.S. Congress takes any further action, the federal government's BAB subsidy payments will be reduced as part of a sequestration of many program expenditures. The IRS has stated that each BAB subsidy payment will be reduced by 8.7 percent for the balance of the federal fiscal year ending September 30, 2013. The State had been scheduled to receive approximately \$367 million in BAB subsidy payments for the 2013 federal fiscal year. The amount of the reduction of the BAB subsidy payment has been less than \$30 million annually and is presently scheduled to continue until 2025, although Congress can terminate or modify it sooner, or extend it. None of the BAB subsidy payments are pledged to pay debt service for the general obligation and SPWB BABs, so this reduction will not affect the State's ability to pay its debt service on time, nor have any material impact on the State's General Fund.

*Future Issuance Plans.* Based on estimates from the Department of Finance, and sales completed in the first half of fiscal year 2015-16, approximately \$2.2 billion of new money general obligation bonds (some of which may initially be in the form of commercial paper notes) and approximately \$224 million of lease-revenue bonds are expected to be issued in fiscal year 2015-16. Based on estimates from the 2016-17 proposed budget, approximately \$4 billion of new money general obligation bonds and approximately \$358 million of lease-revenue bonds are expected to be issued in fiscal year 2016-17. These projections will be updated based on

updated funding needs and actual spending. The actual amount of bonds sold will depend on other factors such as overall budget constraints and market conditions. The State also expects to issue refunding bonds as market conditions warrant.

*Tobacco Settlement Revenue Bonds.* In 1998, the State signed a settlement agreement (the MSA ) with four major cigarette manufacturers (the participating manufacturers ). Under the MSA, the participating manufacturers agreed to make payments to the State in perpetuity, which payments were predicted at the time to total approximately \$25 billion over the first 25 years. Under a separate Memorandum of Understanding, half of the payments made by the cigarette manufacturers will be paid to the State and half to local governments, subject to certain adjustments.

The Tobacco Securitization Law, enacted in 2002, authorized the establishment of a special purpose trust to purchase those assets and to issue revenue bonds secured by the tobacco settlement revenues. Legislation in 2003 amended the Tobacco Securitization Law to authorize a credit enhancement mechanism that requires the Governor to request an appropriation from the General Fund in the annual Budget Act to pay debt service and other related costs in the event tobacco settlement revenues and certain other amounts are insufficient. The Legislature is not obligated to make any General Fund appropriation so requested. The credit enhancement mechanism only applies to certain tobacco settlement bonds that were issued in 2005, 2013, and 2015 with an outstanding principal amount of approximately \$2.4 billion (the Enhanced Bonds ). The Enhanced Bonds are neither general nor legal obligations of the State or any of its political subdivisions and neither the faith and credit nor the taxing power nor any other assets or revenues of the State or any of its political subdivisions shall be pledged to the payment of the Enhanced Bonds. However, as described above, the State committed to request the Legislature for a General Fund appropriation in the event there are insufficient tobacco settlement revenues to pay debt service with respect to the Enhanced Bonds, and certain other available amounts, including the reserve fund for the Enhanced Bonds, are depleted. This appropriation has been requested and approved by the Legislature but use of the appropriated moneys has never been required.

Draws on the reserve fund for the Enhanced Bonds in the amount of approximately \$7.9 million were used to make required debt service payments on the 2005 bonds in 2011 and 2012. In April 2013, the reserve fund was replenished in full from tobacco revenues. As of December 1, 2015, the balance of the reserve fund for the Enhanced Bonds was \$150 million. If, in any future year tobacco settlement revenues are less than required debt service payments on the Enhanced Bonds in such year, additional draws on the reserve fund will be required and at some point in the future the reserve fund may become fully depleted. The State is not obligated to replenish the reserve fund from the General Fund, or to request an appropriation to replenish the reserve fund.

*Unemployment Insurance Fund Borrowing.* Commencing in fiscal year 2011-12, the State has been required to pay interest on loans made by the federal government to the State s Unemployment Insurance Fund (the UI Fund ). The UI Fund deficit reached \$10.2 billion at the end of calendar year 2012, but has decreased to \$6.7 billion at the end of calendar year 2015. The UI Fund deficit is projected to be \$4.5 billion at the end of calendar year 2016. Fiscal year 2015-16 and projected fiscal year 2016-17 amounts from the General Fund to make these interest payments are less than \$200 million annually.

*Office of Statewide Health Planning and Development Guarantees.* The Office of Statewide Health Planning and Development of the State of California ( OSHPD ) insures loans and bond issues for the financing and refinancing of construction and renovation projects for nonprofits and publically-owned healthcare facilities. This program is currently authorized by statute to insure up to \$3 billion for health facility projects. As of October 31, 2015, OSHPD insured approximately 103 loans to nonprofit or publicly owned health facilities throughout California for approximately \$1.8 billion. The cash balance of the fund was approximately \$164.3 million as of October 31, 2015.

*Cash Flow Borrowings.* The majority of the State s General Fund receipts are received in the latter part of the fiscal year. Disbursements from the General Fund occur more evenly throughout the fiscal year. The State s cash management program customarily addresses this timing difference by making use of internal borrowing and by issuing short-term notes in the capital markets when necessary.

**Internal Borrowing.** The General Fund is currently authorized by law to borrow for cash management purposes from more than 700 of the State's approximately 1,300 other funds in the State Treasury (the Special Funds). Total borrowing from Special Funds must be approved quarterly by the Pooled Money Investment Board (PMIB). The State Controller submits an authorization request to the PMIB quarterly, based on forecasted available funds and borrowing needs. The Legislature may from time to time adopt legislation establishing additional authority to borrow from Special Funds. As of the 2015 Budget Act, the General Fund is projected to have up to approximately \$27 billion of internal funds (excluding the Budget Stabilization Account (BSA) and the Special Fund for Economic Uncertainties (SFEU)) available during fiscal year 2015-16. One fund from which moneys may be borrowed to provide additional cash resources to the General Fund is the BSA. While during fiscal years 2008-09 through 2013-14, there were no funds available in the BSA, the BSA is now funded at a projected \$3.5 billion in fiscal year 2015-16. The State also may transfer funds into the General Fund from the SFEU, which is not a special fund.

**External Borrowing.** External borrowing is typically done with external revenue anticipation notes (RANs) that are payable not later than the last day of the fiscal year in which they are issued. Prior to the current fiscal year, RANs had been issued in all but one fiscal year since the mid-1980s and have always been paid at maturity. No RANs are planned in fiscal years 2015-16 or 2016-17. The State also is authorized under certain circumstances to issue revenue anticipation warrants (RAWs) that are payable in the subsequent fiscal year. The State issued RAWs to bridge short-term cash management shortages in the early 1990s and early 2000s.

RANs and RAWs are both payable from any Unapplied Money in the General Fund on their maturity date, subject to the prior application of such money in the General Fund to pay Priority Payments. Priority Payments are payments as and when due to: (i) support the public school system and public institutions of higher education (as provided in Section 8 of Article XVI of the State Constitution); (ii) pay principal of and interest on general obligation bonds and general obligation commercial paper notes of the State; (iii) reimburse local governments for certain costs for realigned public safety programs if not provided from a share of State sales and use taxes, as provided in Article XIII, Section 36 of the State Constitution, enacted by Proposition 30; (iv) provide reimbursement from the General Fund to any special fund or account to the extent such reimbursement is legally required to be made to repay borrowings therefrom pursuant to California Government Code Sections 16310 or 16418; and (v) pay State employees' wages and benefits, State payments to pension and other State employee benefit trust funds, State Medi-Cal claims, lease payments to support lease revenue bonds, and any amounts determined by a court of competent jurisdiction to be required by federal law or the State Constitution to be paid with State warrants that can be cashed immediately.

The State entered fiscal year 2014-15 in the strongest cash position since the start of the last recession in 2008. For the first time since fiscal year 2007-08, the State began a fiscal year without any internal borrowings, and a positive cash balance in the General Fund of \$1.9 billion. The State managed its cash flow needs for fiscal year 2014-15 entirely through the use of internal borrowing and a RANs borrowing of \$2.8 billion, the smallest RANs borrowing since fiscal year 2006-07. The State's cash position continued to be strong entering fiscal year 2015-16, as the General Fund ended the previous year with a positive cash balance of \$2.5 billion. The State's cash flow projections for fiscal year 2015-16 indicate that internal borrowings will be sufficient and available to meet the normal peaks and valleys of the State's cash needs, while maintaining a cushion at all times of at least \$2.5 billion. Accordingly, the State does not plan to use any external RANs borrowing in fiscal year 2015-16, only the second time this has occurred since the commencement of annual RANs borrowings in the early 1980s. The 2016-17 proposed budget assumes a continuation of a strong cash position throughout the year, with no plans for external cash flow borrowing.

State fiscal officers constantly monitor the State's cash position and if it appears that cash resources may become inadequate (including the maintenance of a projected cash reserve of at least \$2.5 billion at any time), they will consider the use of other cash management techniques, including seeking additional legislation.

The State has employed additional cash management measures during some fiscal years; all of the following techniques were used at one time or another during the last several fiscal years, but none are planned in fiscal year 2015-16: (i) the State Controller has delayed certain types of disbursements from the General Fund; (ii) legislation was enacted to increase the State's internal borrowing capability and the State has increased the General Fund's internal borrowing; (iii) legislation was enacted to defer some of the State's disbursements until later in the then-current fiscal year, when more cash receipts are expected; and (iv) the issuance of registered warrants because of insufficient cash resources. From time to time, the Legislature changes by statute the due date for various payments, including those owed to public schools, universities and local governments, until a later date in the fiscal year in order to align more closely the State's revenue with its expenditures. This technique has been used several times in the last few fiscal years. Some of these statutory deferrals were made permanent, and others were implemented for only one fiscal year.

*Retirement Liabilities.* The State's retirement programs are projected to have significant and growing unfunded liabilities. The Governor's 2016-17 proposed budget estimates that the State currently has \$72 billion in unfunded retiree health care obligations. If the State does not take action concerning these liabilities soon, the extra costs needed to retire these unfunded liabilities over the next few decades will likely increase dramatically. Lower than expected investment returns have been a primary reason for the growth of unfunded pension liabilities in the last decade. There has also been benefit increases that are implemented retroactively, and demographic and pay changes among employees and retirees. In addition, the State has very little flexibility under case law to alter benefit and funding arrangements for current employees. Generally, pension benefit packages, once promised to an employee, cannot be reduced, either retrospectively or prospectively. There can be no assurance that the State's annual required contributions to CalPERS and CalSTRS will not significantly increase in the future. The actual amount of any increases will depend on a variety of factors, including, but not limited to, investment returns, actuarial assumptions, experience and retirement benefit adjustments. In addition, governments typically do not pre-fund their retiree health liabilities. This means that future taxpayers may bear a larger cost burden for these benefits. Unlike pensions, there are no investment returns under this type of funding structure to cover a large portion of benefit costs.

*Health Care Reform.* California continues implementation of the federal Affordable Care Act. Since January 1, 2014, more than 5 million Californians have obtained health insurance, either through the State's new insurance exchange (Covered California) or through the two part (mandatory and optional) expansion of Medi-Cal. The mandatory Medi-Cal expansion simplified eligibility, enrollment, and retention rules that make it easier to get and stay on Medi-Cal.

The optional expansion of Medi-Cal extended eligibility to adults without children, and parent and caretaker relatives with incomes up to 138 percent of the federal poverty level. The 2016-17 proposed budget includes costs of \$13.7 billion (\$551.5 million from the General Fund) in fiscal year 2016-17 for the optional expansion. The federal government has committed to pay nearly 100 percent of the costs of this expansion for the first three years. Beginning January 1, 2017, California will begin to assume 5 percent of these costs with California's contribution gradually increasing each fiscal year until fiscal year 2020-21, when the State will pay 10 percent of the total costs. By fiscal year 2020-21, the General Fund share for the optional expansion is estimated to be \$2.1 billion. The 2016-17 proposed budget projects the optional expansion caseload to be 3.4 million in fiscal year 2016-17.

### *Litigation*

The State of California is a party to numerous legal proceedings, many of which normally occur in governmental operations. In addition, the State of California is involved in certain other legal proceedings (described in the State of California's recent financial statements) that, if decided against the State of California might require the State of California to make significant future expenditures or substantially impair future revenue sources. Because of the prospective nature of these proceedings, it is not presently possible to predict the outcome of such litigation, estimate the potential impact on the ability of the State to pay debt service costs on its obligations, or determine what impact, if any, such proceedings may have on the Fund.

**STATEMENT OF ADDITIONAL INFORMATION**

May 9, 2016

Nuveen California Dividend Advantage Municipal Fund (the Fund ) is a diversified, closed-end management investment company registered under the Investment Company Act of 1940, as amended (the 1940 Act ). The Fund was incorporated under the laws of the Commonwealth of Massachusetts on December 1, 1998.

This Statement of Additional Information (the SAI ) relating to Common Shares of the Fund ( Common Shares ) does not constitute a prospectus, but should be read in conjunction with the prospectus relating thereto dated May 9, 2016 (the Prospectus ). This SAI does not include all information that a prospective investor should consider before purchasing Common Shares. Investors should obtain and read the Prospectus prior to purchasing such shares. In addition, the Fund s financial statements and the independent registered public accounting firm s report therein included in the Fund s annual report dated February 29, 2016, are incorporated herein by reference. You may obtain a copy of the Prospectus may be obtained without charge by calling (800) 257-8787. You may also obtain a copy of the Prospectus on the U.S. Securities and Exchange Commission s (the SEC ) web site (<http://www.sec.gov>). Capitalized terms used but not defined in this SAI have the meanings ascribed to them in the Prospectus.

### USE OF PROCEEDS

The net proceeds from the issuance of Common Shares hereunder will be used by the Fund to invest in various municipal securities, in accordance with the Fund's investment objectives and policies as stated below. To the extent the Fund uses the net proceeds of any offering to invest in municipal securities, it is presently anticipated that the Fund will be able to invest substantially all of such proceeds in securities that meet the Fund's investment objective and policies within one month from the date on which the proceeds from an offering are received by the Fund. Pending such investment, it is anticipated that the proceeds will be invested in short-term or long-term securities issued by the U.S. Government and its agencies or instrumentalities or in high quality, short-term money market instruments. See Risk Factors Leverage Risk and Use of Leverage in the Prospectus.

### INVESTMENT RESTRICTIONS

Except as described below, the Fund, as a fundamental policy, may not, without the approval of the holders of a majority of the outstanding Common Shares and preferred shares, including VRDP Shares, voting together as a single class, and of the holders of a majority of the outstanding preferred shares, including VRDP Shares, voting as a separate class:

- (1) Issue senior securities, as defined in the 1940 Act, other than Preferred Shares, except to the extent such issuance might be involved with respect to borrowings described under subparagraph (2) below;<sup>1</sup>
- (2) Borrow money, except from banks for temporary or emergency purposes or for repurchase of its shares, and then only in an amount not exceeding one-third of the value of the Fund's total assets including the amount borrowed less the Fund's liabilities (other than borrowings<sup>2</sup>);
- (3) Act as underwriter of another issuer's securities, except to the extent that the Fund may be deemed an underwriter within the meaning of the Securities Act of 1933, as amended (the 1933 Act) in connection with the purchase and sale of portfolio securities<sup>3</sup>;
- (4) Invest more than 25% of its total assets in securities of issuers in any one industry; provided, however, that such limitation shall not apply to municipal bonds other than those municipal bonds backed only by the assets and revenues of non-governmental users;
- (5) Purchase or sell real estate, but this shall not prevent the Fund from investing in municipal securities secured by real estate or interests therein;
- (6) Purchase or sell physical commodities unless acquired as a result of ownership of securities or other instruments (but this shall not prevent the Fund from purchasing or selling options, futures contracts or derivative instruments or from investing in securities or other instruments backed by physical commodities);

<sup>1</sup> Section 18(c) of the 1940 Act generally limits a registered closed-end investment company to issuing one class of senior securities representing indebtedness and one class of senior securities representing stock, except that the class of indebtedness or stock may be issued in one or more series, and promissory notes or other evidences of indebtedness issued in consideration of any loan, extension, or renewal thereof, made by a bank or other person and privately arranged, and not intended to be publicly distributed, are not deemed a separate class of senior securities.

<sup>2</sup> Section 18(a) of the 1940 Act generally prohibits a registered closed-end fund from incurring borrowings if, immediately thereafter, the aggregate amount of its borrowings exceeds 33 1/3% of its total assets.

<sup>3</sup> Section 21 of the 1940 Act makes it unlawful for a registered investment company, like the Fund, to lend money or other property if (i) the investment company's policies set forth in its registration statement do not permit such a loan or (ii) the borrower controls or is under common control with the investment company. The Fund has not applied for, and currently does not intend to apply for, any exemptive relief that would allow it to make loans outside of the limits of the 1940 Act.

(7) Make loans, except as permitted by 1940 Act and exemptive orders granted under the 1940 Act;<sup>1</sup>

(8) Invest more than 5% of its total assets in securities of any one issuer, except that this limitation shall not apply to securities of the U.S. government, its agencies and instrumentalities or to the investment of 25% of its total assets; and

(9) Invest, under normal circumstances, less than 80% of its Managed Assets in municipal securities and other related investments, the income from which is exempt from regular federal and California income taxes.

For purposes of the foregoing, majority of the outstanding, when used with respect to particular shares of the Fund, means (i) 67% or more of the shares present at a meeting, if the holders of more than 50% of the shares are present or represented by proxy, or (ii) more than 50% of the shares, whichever is less.

For the purpose of applying the limitation set forth in subparagraph (4) above, such policy will apply to municipal securities if the payment of principal and interest for such securities is derived solely from a specific project, and in that situation the Fund will consider such municipal securities to be in an industry associated with the project.

For the purpose of applying the limitation set forth in subparagraph (8) above, an issuer shall be deemed the sole issuer of a security when its assets and revenues are separate from other governmental entities and its securities are backed only by its assets and revenues. Similarly, in the case of a non-governmental issuer, such as an industrial corporation or a privately owned or operated hospital, if the security is backed only by the assets and revenues of the non-governmental issuer, then such non-governmental issuer would be deemed to be the sole issuer. Where a security is also backed by the enforceable obligation of a superior or unrelated governmental or other entity (other than a bond insurer), it shall also be included in the computation of securities owned that are issued by such governmental or other entity. Where a security is guaranteed by a governmental entity or some other facility, such as a bank guarantee or letter of credit, such a guarantee or letter of credit would be considered a separate security and would be treated as an issue of such government, other entity or bank. When a municipal bond is insured by bond insurance, it shall not be considered a security that is issued or guaranteed by the insurer; instead, the issuer of such municipal bond will be determined in accordance with the principles set forth above. The foregoing restrictions do not limit the percentage of the Fund's assets that may be invested in municipal securities insured by any given insurer.

Under the 1940 Act, the Fund may invest only up to 10% of its total assets in the aggregate in shares of other investment companies and only up to 5% of its total assets in any one investment company, provided the investment does not represent more than 3% of the voting stock of the acquired investment company at the time such shares are purchased. The Fund will bear its ratable share of that investment company's expenses, and will remain subject to payment of the Fund's management, advisory and administrative fees with respect to assets so invested. Holders of Common Shares would therefore be subject to duplicative expenses to the extent the Fund invests in other investment companies. In addition, the securities of other investment companies may also be leveraged and will therefore be subject to leverage risks.

In addition to the foregoing fundamental investment policies, the Fund is also subject to the following non-fundamental restrictions and policies, which may be changed by the Board of Trustees. The Fund may not:

(1) Sell securities short, unless the Fund owns or has the right to obtain securities equivalent in kind and amount to the securities sold, at no added cost, and provided that transactions in options, futures contracts, options on futures contracts, or other derivative instruments are not deemed to constitute selling securities short.

<sup>1</sup> Section 18(c) of the 1940 Act generally limits a registered closed-end investment company to issuing one class of senior securities representing indebtedness and one class of senior securities representing stock, except that the class of indebtedness or stock may be issued in one or more series, and promissory notes or other evidences of indebtedness issued in consideration of any loan, extension, or renewal thereof, made by a bank or other person and privately arranged, and not intended to be publicly distributed, are not deemed a separate class of senior securities.

- (2) Invest more than 10% of its Managed Assets in securities of other open- or closed-end investment companies (including ETFs) that invest primarily in municipal securities of the types in which the Fund may invest directly.
- (3) Enter into futures contracts or related options or forward contracts, if more than 30% of the Fund's net assets would be represented by futures contracts or more than 5% of the Fund's net assets would be committed to initial margin deposits and premiums on futures contracts and related options.
- (4) Purchase securities when borrowings exceed 5% of its total assets if and so long as Preferred Shares are outstanding.
- (5) Purchase securities of companies for the purpose of exercising control, except that the Fund may invest up to 5% of its net assets in tax-exempt or taxable fixed-income securities or equity securities for the purpose of acquiring control of an issuer whose municipal bonds (a) the Fund already owns and (b) have deteriorated or are expected shortly to deteriorate significantly in credit quality, provided Nuveen Asset Management, LLC ( Nuveen Asset Management ), the Fund's investment sub-adviser, determines that such investment should enable the Fund to better maximize the value of its existing investment in such issuer.
- (6) Invest, under normal circumstances, less than 80% of its Managed Assets in investment grade securities that, at the time of investment, are rated within the four highest grades (Baa or BBB or better) by at least one nationally recognized statistical ratings organizations ( NRSROs ) or are unrated but judged to be of comparable quality by Nuveen Asset Management.
- (7) Invest more than 20% of its Managed Assets in municipal securities that at the time of investment are rated below investment grade or are unrated but judged to be of comparably quality by Nuveen Asset Management.
- (8) Invest more than 10% of the Fund's Managed Assets in municipal securities rated below B3/B- or that are unrated but judged to be of comparable quality by Nuveen Asset Management.

The restrictions and other limitations set forth above will apply only at the time of purchase of securities and will not be considered violated unless an excess or deficiency occurs or exists immediately after and as a result of an acquisition of securities.

At least six months prior to the scheduled redemption of all outstanding VRDP Shares in 2041, the Fund will maintain segregated assets rated at least investment grade (and including certain deposit securities, including, but not limited to, cash or cash equivalents, U.S. Government Securities, highly rated municipal obligations or money market funds, in an amount equal to 20% of segregated assets, with 135 days remaining to the redemption date, increasing to 100% with 15 days remaining) with a market value equal to at least 110% of the liquidation preference of all outstanding VRDP Shares until the redemption of all such outstanding VRDP Shares.

#### **INVESTMENT OBJECTIVES, POLICIES AND TECHNIQUES**

The following information supplements the discussion of the Fund's investment objectives, policies, and techniques that are described in the Prospectus.
