Form 424B2  
November 14, 2016

Filed Pursuant to Rule 424(b)(2)  
File No. 333-202840

**Title of Each Class of**

<b>Securities Offered</b>	<b>Maximum Aggregate Offering Price</b>	<b>Amount of Registration Fee<sup>(1)</sup></b>
Medium Term Notes, Series K, Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000 <sup>®</sup> Index and the iShares <sup>®</sup> MSCI EAFE ETF due May 15, 2018	\$7,332,000	\$849.78

<sup>(1)</sup> The total filing fee of \$849.78 is calculated in accordance with Rule 457(r) of the Securities Act of 1933 (the Securities Act ) and will be paid by wire transfer within the time required by Rule 456(b) of the Securities Act.

PRICING SUPPLEMENT No. 774 dated November 9, 2016

(To Market Measure Supplement dated March 18, 2015,

Prospectus Supplement dated March 18, 2015

and Prospectus dated March 18, 2015)

**Wells Fargo & Company**

**Medium-Term Notes, Series K**

**Equity Index and ETF Linked Securities**

**Market Linked Securities Auto-Callable with Contingent Absolute Return**

**and Buffered Downside with Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the iShares®**

**MSCI EAFE ETF due May 15, 2018**

n Linked to the **lowest performing** of the Russell 2000® Index and the iShares® MSCI EAFE ETF (each referred to as a Market Measure )

n Unlike ordinary debt securities, the securities do not pay interest, do not repay a fixed amount of principal at maturity and are subject to potential automatic call upon the terms described below. Whether the securities are automatically called for a fixed call premium and, if not automatically called, the payment at maturity, will depend in each case on the closing value of the lowest performing Market Measure on the relevant call date. The lowest performing Market Measure on any call date (including the final calculation day) is the Market Measure that has the lowest closing value on that date as a percentage of its starting value

n **Automatic Call.** If the closing value of the lowest performing Market Measure on any call date is greater than or equal to its starting value, we will automatically call the securities for the original offering price plus the call premium applicable to that call date. The call premium applicable to each call date is a percentage of the original offering price based on a rate of 9.05% per annum

Call Date	Call Premium
May 10, 2017	4.525% of the original offering price
November 10, 2017	9.05% of the original offering price
May 10, 2018 (the <u>final calculation day</u> )	13.575% of the original offering price

n **Payment at Maturity.** If the securities are not automatically called prior to the final calculation day, the payment at maturity will be based on the closing value of the lowest performing Market Measure on the final calculation day and could be greater than or less than the original offering price per security as follows:

- i If the closing value of the lowest performing Market Measure on the final calculation day is greater than or equal to its starting value, the securities will be automatically called for the original offering price plus the call premium applicable to the final calculation day
- j If the closing value of the lowest performing Market Measure on the final calculation day is less than its starting value, but not by more than 20%, you will receive the original offering price plus a positive return equal to the absolute value of the percentage decline in the value of the lowest performing Market Measure

on the final calculation day from its starting value, which will effectively be capped at a positive return of 20%

- j If the closing value of the lowest performing Market Measure on the final calculation day is less than its starting value by more than 20%, you will receive less than the original offering price and have downside exposure to the decrease in the value of the lowest performing Market Measure on the final calculation day from its starting value, subject to the buffering effect of a multiplier equal to 1.25
- n Investors may lose some, or all, of the original offering price
- n Your return on the securities will depend solely on the performance of the Market Measure that is the lowest performing Market Measure on each call date. You will not benefit in any way from the performance of the better performing Market Measure
- n Any positive return on the securities upon an automatic call will be limited to the applicable call premium, even if the closing value of the lowest performing Market Measure on the applicable call date significantly exceeds its starting value. In addition, if the securities are not automatically called, any positive return on the securities based on the contingent absolute return feature is limited to 20%, and any depreciation of the lowest performing Market Measure on the final calculation day from its starting value by more than 20% will result in a loss, rather than a positive return, on the securities
- n All payments on the securities are subject to the credit risk of Wells Fargo & Company, and you will have no ability to pursue either Market Measure or any securities included in either Market Measure for payment; if Wells Fargo & Company defaults on its obligations, you could lose some or all of your investment
- n No periodic interest or dividends
- n No exchange listing; designed to be held to maturity

**On the date of this pricing supplement, the estimated value of the securities is \$993.80 per security. The estimated value of the securities was determined for us by Wells Fargo Securities, LLC using its proprietary pricing models. It is not an indication of actual profit to us or to Wells Fargo Securities, LLC or any of our other affiliates, nor is it an indication of the price, if any, at which Wells Fargo Securities, LLC or any other person may be willing to buy the securities from you at any time after issuance. See Investment Description in this pricing supplement.**

**The securities have complex features and investing in the securities involves risks not associated with an investment in conventional debt securities. See Risk Factors herein on page PRS-12.**

**The securities are unsecured obligations of Wells Fargo & Company and all payments on the securities are subject to the credit risk of Wells Fargo & Company. The securities are not deposits or other obligations of a depository institution and are not insured by the Federal Deposit Insurance Corporation, the Deposit Insurance Fund or any other governmental agency of the United States or any other jurisdiction.**

**Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this pricing supplement or the accompanying market measure supplement, prospectus supplement and prospectus is truthful or complete. Any representation to the contrary is a criminal offense.**

	Original Offering Price	Agent Discount <sup>(1)</sup>	Proceeds to Wells Fargo
Per Security	\$1,000.00	\$0.50	\$999.50
<b>Total</b>	<b>\$7,332,000.00</b>	<b>\$3,666.00</b>	<b>\$7,328,334.00</b>

<sup>(1)</sup> Wells Fargo Securities, LLC, a wholly owned subsidiary of Wells Fargo & Company, is the agent for the distribution of the securities and is acting as principal. See Investment Description in this pricing supplement for further information.

**Wells Fargo Securities**

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Investment Description**

The Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the iShares® MSCI EAFE ETF due May 15, 2018 are senior unsecured debt securities of Wells Fargo & Company ( Wells Fargo ) that do not pay interest, do not repay a fixed amount of principal at maturity and are subject to potential automatic call upon the terms described in this pricing supplement. Whether the securities are automatically called for a fixed call premium and, if they are not automatically called, the payment at maturity will depend in each case on the closing value of the **lowest performing** of the Russell 2000® Index and the iShares® MSCI EAFE ETF (each referred to as a Market Measure ) on the relevant call date. The lowest performing Market Measure on any call date (including the final calculation day) is the Market Measure that has the lowest closing value on that date as a percentage of its starting value. The securities provide:

- (i) the possibility of an automatic early call of the securities at a fixed call premium if the closing value of the lowest performing Market Measure on either of the first two call dates is greater than or equal to its starting value; and
- (ii) if the securities are not automatically called prior to the final calculation day:
  - (a) the possibility of a return equal to the call premium applicable to the final calculation day if the closing value of the lowest performing Market Measure on the final calculation day is greater than or equal to its starting value;
  - (b) the possibility of a positive return equal to the absolute value of the percentage decline in the value of the lowest performing Market Measure on the final calculation day from its starting value if, **and only if**, the closing value of the lowest performing Market Measure on the final calculation day is not less than its starting value by more than 20%; and
  - (c) exposure to the decline in the value of the lowest performing Market Measure on the final calculation day from its starting value if the lowest performing Market Measure on the final calculation day has declined by more than 20% from its starting value, subject to the buffering effect of the multiplier.

**Any positive return on the securities upon an automatic call will be limited to the applicable call premium, even if the closing value of the lowest performing Market Measure on the applicable call date exceeds its starting value by more than the percentage represented by that call premium. In addition, if the securities are not automatically called, any positive return on the securities based on the contingent absolute return feature is limited to 20%, and any depreciation of the lowest performing Market Measure on the final calculation day**

**from its starting value by more than 20% will result in a loss, rather than a positive return, on the securities. If the closing value of the lowest performing Market Measure on the final calculation day is less than its starting value by more than 20%, you will lose some, and possibly all, of the original offering price of your securities at maturity.**

**Your return on the securities will depend solely on the performance of the Market Measure that is the lowest performing Market Measure on each call date (including the final calculation day). You will not benefit in any way from the performance of the better performing Market Measure. Therefore, you will be adversely affected if either Market Measure performs poorly, even if the other Market Measure performs favorably.**

**The securities are riskier than alternative investments linked to only one of the Market Measures or linked to a basket composed of both Market Measures. Unlike those alternative investments, the securities will be subject to the full risks of both Market Measures, with no offsetting benefit from the better performing Market Measure. The securities are designed for investors who understand and are willing to bear this additional risk in exchange for the automatic call and contingent absolute return features that the securities offer. Because the securities may be adversely affected by poor performance of either Market Measure, you should not invest in the securities unless you understand and are willing to accept the full downside risks of both Market Measures.**

All payments on the securities are subject to the credit risk of Wells Fargo.

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Investment Description (Continued)**

The original offering price of each security of \$1,000 includes certain costs that are borne by you. Because of these costs, the estimated value of the securities on the pricing date is less than the original offering price. The costs included in the original offering price relate to selling, structuring, hedging and issuing the securities, as well as to our funding considerations for debt of this type.

The costs related to selling, structuring, hedging and issuing the securities include (i) the agent discount, (ii) the projected profit that our hedge counterparty (which may be one of our affiliates) expects to realize for assuming risks inherent in hedging our obligations under the securities and (iii) hedging and other costs relating to the offering of the securities.

Our funding considerations take into account the higher issuance, operational and ongoing management costs of market-linked debt such as the securities as compared to our conventional debt of the same maturity, as well as our liquidity needs and preferences. Our funding considerations are reflected in the fact that we determine the economic terms of the securities based on an assumed funding rate that is generally lower than the interest rates implied by secondary market prices for our debt obligations and/or by other traded instruments referencing our debt obligations, which we refer to as our secondary market rates. As discussed below, our secondary market rates are used in determining the estimated value of the securities.

If the costs relating to selling, structuring, hedging and issuing the securities were lower, or if the assumed funding rate we use to determine the economic terms of the securities were higher, the economic terms of the securities would be more favorable to you and the estimated value would be higher. The estimated value of the securities as of the pricing date is set forth on the cover page of this pricing supplement.

*Determining the estimated value*

Our affiliate, Wells Fargo Securities, LLC (WFS), calculated the estimated value of the securities set forth on the cover page of this pricing supplement based on its proprietary pricing models. Based on these pricing models and related market inputs and assumptions referred to in this section below, WFS determined an estimated value for the securities by estimating the value of the combination of hypothetical financial instruments that would replicate the payout on the securities, which combination consists of a non-interest bearing, fixed-income bond (the debt component) and one or more derivative instruments underlying the economic terms of the securities (the derivative component).

The estimated value of the debt component is based on a reference interest rate, determined by WFS as of a recent date, that generally tracks our secondary market rates. Because WFS does not continuously calculate our reference interest rate, the reference interest rate used in the calculation of the estimated value of the debt component may be higher or lower than our secondary market rates at the time of that calculation. As noted above, we determine the

economic terms of the securities based upon an assumed funding rate that is generally lower than our secondary market rates. In contrast, in determining the estimated value of the securities, we value the debt component using a reference interest rate that generally tracks our secondary market rates. Because the reference interest rate is generally higher than the assumed funding rate, using the reference interest rate to value the debt component generally results in a lower estimated value for the debt component, which we believe more closely approximates a market valuation of the debt component than if we had used the assumed funding rate.

WFS calculated the estimated value of the derivative component based on a proprietary derivative-pricing model, which generated a theoretical price for the derivative instruments that constitute the derivative component based on various inputs, including the derivative component factors identified in Risk Factors The Value Of The Securities Prior To Stated Maturity Will Be Affected By Numerous Factors, Some Of Which Are Related In Complex Ways. These inputs may be market-observable or may be based on assumptions made by WFS in its discretion.

The estimated value of the securities determined by WFS is subject to important limitations. See Risk Factors The Estimated Value Of The Securities Is Determined By Our Affiliate's Pricing Models, Which May Differ From Those Of Other Dealers and Risk Factors Our Economic Interests And Those Of Any Dealer Participating In The Offering Are Potentially Adverse To Your Interests.

*Valuation of the securities after issuance*

The estimated value of the securities is not an indication of the price, if any, at which WFS or any other person may be willing to buy the securities from you in the secondary market. The price, if any, at which WFS or any of its affiliates may purchase the securities in the secondary market will be based upon WFS's proprietary pricing models and will fluctuate over the term of the securities due to changes in market conditions and other relevant factors.

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Investment Description (Continued)**

However, absent changes in these market conditions and other relevant factors, except as otherwise described in the following paragraph, any secondary market price will be lower than the estimated value on the pricing date because the secondary market price will be reduced by a bid-offer spread, which may vary depending on the aggregate face amount of the securities to be purchased in the secondary market transaction, and the expected cost of unwinding any related hedging transactions. Accordingly, unless market conditions and other relevant factors change significantly in your favor, any secondary market price for the securities is likely to be less than the original offering price.

If WFS or any of its affiliates makes a secondary market in the securities at any time up to the issue date or during the 3-month period following the issue date, the secondary market price offered by WFS or any of its affiliates will be increased by an amount reflecting a portion of the costs associated with selling, structuring, hedging and issuing the securities that are included in the original offering price. Because this portion of the costs is not fully deducted upon issuance, any secondary market price offered by WFS or any of its affiliates during this period will be higher than it would be if it were based solely on WFS's proprietary pricing models less the bid-offer spread and hedging unwind costs described above. The amount of this increase in the secondary market price will decline steadily to zero over this 3-month period. If you hold the securities through an account at WFS or any of its affiliates, we expect that this increase will also be reflected in the value indicated for the securities on your brokerage account statement.

If WFS or any of its affiliates makes a secondary market in the securities, WFS expects to provide those secondary market prices to any unaffiliated broker-dealers through which the securities are held and to commercial pricing vendors. If you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, that broker-dealer may obtain market prices for the securities from WFS (directly or indirectly), but could also obtain such market prices from other sources, and may be willing to purchase the securities at any given time at a price that differs from the price at which WFS or any of its affiliates is willing to purchase the securities. As a result, if you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, the value of the securities on your brokerage account statement may be different than if you held your securities at WFS or any of its affiliates.

The securities will not be listed or displayed on any securities exchange or any automated quotation system. Although WFS and/or its affiliates may buy the securities from investors, they are not obligated to do so and are not required to make a market for the securities. There can be no assurance that a secondary market will develop.

---

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Investor Considerations**

We have designed the securities for investors who:

- n believe that the closing value of the lowest performing Market Measure will be greater than or equal to its starting value on one of the three call dates;
- n seek the potential for a fixed return if the lowest performing Market Measure has appreciated at all as of any of the three call dates in lieu of full participation in any potential appreciation of either or both Market Measures;
- n understand that any positive return on the securities based on the contingent absolute return feature is limited to 20%, and that any depreciation of the lowest performing Market Measure on the final calculation day from its starting value by more than 20% will result in a loss, rather than a positive return, on the securities;
- n understand that if the securities are not automatically called and the closing value of the lowest performing Market Measure on the final calculation day is less than its starting value by more than 20%, they will be exposed to the decline in the lowest performing Market Measure from its starting value, subject to the buffering effect of the multiplier, and will lose some, and possibly all, of the original offering price per security at maturity;
- n understand that the ability of the multiplier to moderate any decline in the value of the lowest performing Market Measure on the final calculation day of more than 20% is progressively reduced as the ending value of the lowest performing Market Measure on the final calculation day declines because the multiplier only acts to buffer the performance of the lowest performing Market Measure on the final calculation day on a percentage basis;
- n understand that the term of the securities may be as short as approximately six months and that they will not receive a higher call premium payable with respect to a later call date if the securities are called on an earlier call date;
- n understand that the return on the securities will depend solely on the performance of the Market Measure that is the lowest performing Market Measure on each call date (including the final calculation day) and that they will not benefit in any way from the performance of the better performing Market Measure;

n

understand that the securities are riskier than alternative investments linked to only one of the Market Measures or linked to a basket composed of both Market Measures;

n understand and are willing to accept the full downside risks of both Market Measures;

n are willing to forgo interest payments on the securities and dividends on the Market Measures or the securities included in either Market Measure; and

n are willing to hold the securities until maturity.

The securities are not designed for, and may not be a suitable investment for, investors who:

n seek a liquid investment or are unable or unwilling to hold the securities to maturity;

n require full payment of the original offering price of the securities at maturity;

n believe that the closing value of the lowest performing Market Measure will be less than its starting value on each of the three call dates and less than its threshold value on the final calculation day;

n are unwilling to accept the risk that the closing value of the lowest performing Market Measure on the final calculation day may decline by more than 20% from its starting value;

n seek a security with a fixed term;

n are unwilling to purchase securities with an estimated value as of the pricing date that is lower than the original offering price, as set forth on the cover page;

n seek current income;

n seek exposure to a basket composed of both Market Measures or a similar investment in which the overall return is based on a blend of the performances of the Market Measures, rather than solely on the lowest performing Market Measure;

n are unwilling to accept the risk of exposure to the small capitalization segment of the United States equity market and foreign developed equity markets;

n seek exposure to the upside performance of either or both Market Measures beyond the applicable call premiums;

n are unwilling to accept the credit risk of Wells Fargo; or

n prefer the lower risk of fixed income investments with comparable maturities issued by companies with comparable credit ratings.

**Market Linked Securities Auto-Callable with Contingent Absolute****Return and Buffered Downside With Multiplier****Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the iShares® MSCI EAFE ETF due May 15, 2018****Terms of the Securities**

<b>Market Measures:</b>	The Russell 2000® Index and the iShares® MSCI EAFE ETF (each referred to as a <u>Market Measure</u> ). The Russell 2000 Index is sometimes referred to herein as the <u>Index</u> and the iShares MSCI EAFE ETF is sometimes referred to herein as the <u>Fund</u> .
<b>Pricing Date:</b>	November 9, 2016
<b>Issue Date:</b>	November 15, 2016 (T+3)
<b>Original Offering Price:</b>	\$1,000 per security. References in this pricing supplement to a <u>security</u> are to a security with a face amount of \$1,000.
<b>Automatic Call:</b>	<p>If the closing value of the lowest performing Market Measure on any call date (including the final calculation day) is greater than or equal to its starting value, the securities will be automatically called, and on the related call settlement date you will be entitled to receive a cash payment per security in U.S. dollars equal to the original offering price per security plus the call premium applicable to the relevant call date. The last call date is the final calculation day, and payment upon an automatic call on the final calculation day, if applicable, will be made on the stated maturity date.</p> <p><b>Any positive return on the securities upon an automatic call will be limited to the applicable call premium, even if the closing value of the lowest performing Market Measure on the applicable call date significantly exceeds its starting value. You will not participate in any appreciation of either Market Measure beyond the applicable call premium.</b></p> <p>If the securities are automatically called, they will cease to be outstanding on the related call</p>

settlement date and you will have no further rights under the securities after such call settlement date. You will not receive any notice from us if the securities are automatically called.

The call premium applicable to each call date is a percentage of the original offering price based on a rate of 9.05% per annum.

**Call Dates and  
Call Premiums:**

<u>Call Date</u>	<u>Call Premium</u>	<u>Payment per Security upon an Automatic Call</u>
May 10, 2017	4.525% of the original offering price	\$1,045.25
November 10, 2017	9.05% of the original offering price	\$1,090.50
May 10, 2018	13.575% of the original offering price	\$1,135.75

We refer to May 10, 2018 as the final calculation day.

The call dates are subject to postponement for non-trading days and the occurrence of a market disruption event. See Postponement of a Calculation Day below.

**Call Settlement  
Date:**

Three business days after the applicable call date (as each such call date may be postponed pursuant to Postponement of a Calculation Day below, if applicable); *provided* that the call settlement date for the last call date is the stated maturity date.

**Stated Maturity  
Date:**

May 15, 2018. If the final calculation day is postponed, the stated maturity date will be the later of (i) May 15, 2018 and (ii) three business days after the final calculation day as postponed. See Postponement of a Calculation Day below. If the stated maturity date is not a business day, the payment to be made on the stated maturity date will be made on the next succeeding business day with the same force and effect as if it had been made on the stated maturity date. The securities are not subject to repayment at the option of any holder of the securities prior to the stated maturity date.

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Terms of the Securities (Continued)**

**Payment at**

**Maturity:**

If the closing value of the lowest performing Market Measure is less than its starting value on each of the three call dates, the securities will not be automatically called, and on the stated maturity date, you will be entitled to receive a cash payment per security in U.S. dollars determined as follows:

if the ending value of the lowest performing Market Measure on the final calculation day is greater than or equal to its threshold value: \$1,000 *plus*

\$1,000 × absolute value of the market measure performance of the lowest performing Market Measure on the final calculation day; or

if the ending value of the lowest performing Market Measure on the final calculation day is less than its threshold value:

\$1,000 × performance factor of the lowest performing Market Measure on the final calculation day × multiplier

**If the securities are not automatically called prior to the final calculation day and the ending value of the lowest performing Market Measure is less than its threshold value, you will lose some, and possibly all, of the original offering price of your securities at maturity.**

All calculations with respect to any payments on the securities (whether upon automatic call or at maturity) will be rounded to the nearest one hundred-thousandth, with five one-millionths rounded upward (e.g., 0.000005 would be rounded to 0.00001); and such payment will be rounded to the nearest cent, with one-half cent rounded upward.

<p><b>Lowest Performing Market Measure:</b></p>	<p>On any call date (including the final calculation day), the <u>lowest performing Market Measure</u> will be the Market Measure with the lowest performance factor on that date.</p>
<p><b>Performance Factor:</b></p>	<p>With respect to a Market Measure on any call date (including the final calculation day), its closing value on such date divided by its starting value (expressed as a percentage).</p>
<p><b>Market Measure Performance:</b></p>	<p>With respect to a Market Measure on the final calculation day, the percentage change from its starting value to its ending value, measured as follows:</p> $\frac{\text{ending value} - \text{starting value}}{\text{starting value}}$ <p>If the market measure performance is equal to <math>\pm 5\%</math>, the absolute value of the market measure performance would be <math>\pm 5\%</math>.</p>
<p><b>Closing Value:</b></p>	<p>With respect to the Index on any trading day, its closing level on that trading day; and with respect to the Fund on any trading day, its fund closing price on that trading day.</p>
<p><b>Closing Level:</b></p>	<p>The <u>closing level</u> of the Index on any trading day means the official closing level of the Index reported by the index sponsor on such trading day, as obtained by the calculation agent on such trading day from the licensed third-party market data vendor contracted by the calculation agent at such time; in particular, taking into account the decimal precision and/or rounding convention employed by such licensed third-party market data vendor on such date. Currently, the calculation agent obtains market data from Thomson Reuters Ltd., but the calculation agent may change its market data vendor at any time without notice. The foregoing provisions of this definition of <u>closing level</u> are subject to the provisions set forth below under <u>Additional Terms of the Securities Market Disruption Events</u>, <u>Adjustments to the Index</u> and <u>Discontinuance of the Index</u>.</p>
<p><b>Fund Closing Price:</b></p>	<p>The <u>fund closing price</u> with respect to the Fund on any trading day means the product of (i) the closing price of one share of the Fund (or one unit of any other security for which a fund closing price must be determined) on such trading day and (ii) the adjustment factor</p>

applicable to the Fund on such trading day.

**Closing Price:**

The closing price with respect to a share of the Fund (or one unit of any other security for which a closing price must be determined) on any trading day means the price, at the scheduled weekday closing time, without regard to after hours or any other trading outside the regular trading session hours, of the share on the principal United States securities exchange registered under the Securities Exchange Act of 1934, as amended, on which

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the  
iShares® MSCI EAFE ETF due May 15, 2018**

**Determining Timing and Amount of Payment on the Securities**

The timing and amount of the payment you will receive will be determined as follows:

PRS-10

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Hypothetical Payout Profile**

The following profile illustrates the potential payment on the securities for a range of hypothetical percentage changes in the closing value of the lowest performing Market Measure from the pricing date to the applicable call date (including the final calculation day). The profile is based on a call premium of 4.525% for the first call date, 9.05% for the second call date and 13.575% for the final call date, which reflect a return of 9.05% per annum. This profile has been prepared for purposes of illustration only. Your actual return will depend on (i) the Market Measure that is the lowest performing Market Measure on each call date; (ii) whether the securities are automatically called; (iii) if the securities are automatically called, the actual call date on which the securities are called; (iv) if the securities are not automatically called, the actual ending value of the lowest performing Market Measure; and (v) whether you hold your securities to maturity or earlier automatic call. The performance of the better performing Market Measure is not relevant to your return on the securities.

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Risk Factors**

The securities have complex features and investing in the securities will involve risks not associated with an investment in conventional debt securities. You should carefully consider the risk factors set forth below as well as the other information contained in this pricing supplement and the accompanying market measure supplement, prospectus supplement and prospectus, including the documents they incorporate by reference. As described in more detail below, the value of the securities may vary considerably before the stated maturity date due to events that are difficult to predict and are beyond our control. You should reach an investment decision only after you have carefully considered with your advisors the suitability of an investment in the securities in light of your particular circumstances. The index underlying the Fund is sometimes referred to as the fund underlying index.

**If The Securities Are Not Automatically Called And The Ending Value Of the Lowest Performing Market Measure Is Less Than Its Threshold Value, You Will Receive Less Than, And Possibly Lose All Of, The Original Offering Price Of Your Securities At Stated Maturity.**

We will not repay you a fixed amount on the securities at maturity. If the closing value of the lowest performing Market Measure is less than its starting value on each of the three call dates, the securities will not be automatically called, and you will receive a payment at stated maturity that will be greater than or less than the original offering price per security, depending on the ending value of the lowest performing Market Measure on the final calculation day.

If the ending value of the lowest performing Market Measure on the final calculation day is less than its threshold value (80% of its starting value), the contingent absolute return feature will not be applicable and the payment you receive at stated maturity will be less than the original offering price per security and will reflect the ending value of the lowest performing Market Measure on the final calculation day expressed as a percentage of its starting value, as adjusted by the multiplier. As a result, you may receive less than, and possibly lose all of, the original offering price per security at stated maturity, even if the value of the lowest performing Market Measure is greater than or equal to its starting value or its threshold value at certain times during the term of the securities.

If the securities are not automatically called and the ending value of the lowest performing Market Measure is less than its threshold value, your return on the securities will be negative, and therefore will be less than the return you would earn if you bought a traditional interest-bearing debt security of Wells Fargo or another issuer with a similar credit rating with the same stated maturity date.

**No Periodic Interest Will Be Paid On The Securities.**

No periodic payments of interest will be made on the securities. However, if the agreed-upon tax treatment is successfully challenged by the Internal Revenue Service (the IRS), you may be required to recognize taxable income over the term of the securities. You should review the section of this pricing supplement entitled United States Federal Tax Considerations.

**The Potential Return On The Securities Is Limited.**

The potential return on the securities upon automatic call is limited to the applicable call premium, regardless of the performance of the lowest performing Market Measure on the applicable call date. The lowest performing Market Measure on the applicable call date may appreciate by significantly more than the percentage represented by the applicable call premium from the pricing date through the applicable call date, in which case an investment in the securities will underperform a hypothetical alternative investment providing a 1-to-1 return based on the performance of the lowest performing Market Measure. Furthermore, if the securities are called on an earlier call date, you will receive a lower call premium than if the securities were called on a later call date, and accordingly, if the securities are called on one of the two earlier call dates, you will not receive the highest potential call premium.

If the securities are not automatically called, any positive return on the securities based on the contingent absolute return feature is limited to 20%, and any depreciation of the lowest performing Market Measure on the final calculation day from its starting value by more than 20% will result in a loss, rather than a positive return, on the securities.

In addition, you will not receive the value of dividends or other distributions with respect to either Market Measure.

**The Buffering Effect Of The Multiplier Will Decrease As The Ending Value Of The Lowest Performing Market Measure On The Final Calculation Day Decreases.**

If the securities are not called prior to stated maturity and the ending value of the lowest performing Market Measure on the final calculation day is less than its threshold value, the payment at maturity will reflect the buffering effect of the multiplier, such that the payment at maturity will be greater than it would have been had it been based solely on the performance of the lowest performing Market Measure on the final calculation day from its starting value to its ending value. As the performance of the lowest performing Market Measure on the final calculation day declines, however, the outperformance of the securities relative to the performance of the lowest performing Market Measure on the final calculation day will decline as well, because the multiplier only acts to buffer the

---

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Risk Factors (Continued)**

performance of the lowest performing Market Measure on the final calculation day on a percentage basis. For example, if the ending value of the lowest performing Market Measure on the final calculation day is 70% of its starting value, the payment at maturity would be equal to \$875.00 per security ( $\$1,000 \times .70 \times \text{multiplier}$ ), which is \$175.00 greater than it would have been had it been based solely on the performance of the lowest performing Market Measure on the final calculation day without the multiplier (i.e., \$700.00). However, if the ending value of the lowest performing Market Measure on the final calculation day is 40% of its starting value, the payment at maturity would be equal to \$500.00 per security ( $\$1,000 \times .40 \times \text{multiplier}$ ), which is only \$100.00 greater than it would have been had it been based solely on the performance of the lowest performing Market Measure on the final calculation day without the multiplier (i.e., \$400.00). If the ending value of the lowest performing Market Measure on the final calculation day is zero, the payment at maturity will be zero ( $\$1,000 \times .00 \times \text{multiplier}$ ).

**The Securities Are Subject To The Full Risks Of Both Market Measures And Will Be Negatively Affected If Either Market Measure Performs Poorly, Even If The Other Market Measure Performs Favorably.**

You are subject to the full risks of both Market Measures. If either Market Measure performs poorly, you may be negatively affected, even if the other Market Measure performs favorably. The securities are not linked to a basket composed of the Market Measures, where the better performance of one Market Measure could offset the poor performance of the other Market Measure. Instead, you are subject to the full risks of whichever Market Measure is the lowest performing Market Measure on each call date (including the final calculation day). As a result, the securities are riskier than an alternative investment linked to only one of the Market Measures or linked to a basket composed of both Market Measures. You should not invest in the securities unless you understand and are willing to accept the full downside risks of both Market Measures.

**You Will Be Subject To Risks Resulting From The Relationship Between The Market Measures.**

It is preferable from your perspective for the Market Measures to be correlated with each other so that their values will tend to increase or decrease at similar times and by similar magnitudes. By investing in the securities, you assume the risk that the Market Measures will not exhibit this relationship. The less correlated the Market Measures, the more likely it is that the closing value of either one of the Market Measures will be below its starting value on each call date and below its threshold value on the final calculation day.

All that is necessary for the securities to not be automatically called for the applicable call premium is for one of the Market Measures to be below its starting value on the applicable call date and all that is necessary for you to suffer a loss on your investment in the securities is for one of the Market Measures to close below its threshold value on the final calculation day; the performance of the better performing Market Measure is not relevant to your return on the securities. It is impossible to predict what the relationship between the Market Measures will be over the term of the securities. Each Market Measure represents a different equity market. The Russell 2000 Index represents the small

capitalization segment of the United States equity market and the iShares MSCI EAFE ETF represents developed equity markets, excluding the United States and Canada. These different equity markets may not perform similarly over the term of the securities.

**You Will Be Subject To Reinvestment Risk.**

If your securities are automatically called early, the term of the securities may be reduced to as short as approximately six months. There is no guarantee that you would be able to reinvest the proceeds from an investment in the securities at a comparable return for a similar level of risk in the event the securities are automatically called prior to maturity.

**The Securities Are Subject To The Credit Risk Of Wells Fargo.**

The securities are our obligations and are not, either directly or indirectly, an obligation of any third party. Any amounts payable under the securities are subject to our creditworthiness, and you will have no ability to pursue either Market Measure or the securities included in either Market Measure for payment. As a result, our actual and perceived creditworthiness may affect the value of the securities and, in the event we were to default on our obligations, you may not receive any amounts owed to you under the terms of the securities.

**The Estimated Value Of The Securities On The Pricing Date, Based On WFS's Proprietary Pricing Models, Is Less Than The Original Offering Price.**

The original offering price of the securities includes certain costs that are borne by you. Because of these costs, the estimated value of the securities on the pricing date is less than the original offering price. The costs included in the original offering price relate to selling, structuring, hedging and issuing the securities, as well as to our funding considerations for debt of this type. The costs related to selling, structuring, hedging and issuing the securities include (i) the agent discount, (ii) the projected profit that our hedge counterparty (which may be one of our affiliates) expects to realize for assuming risks inherent in hedging our obligations under the securities and (iii) hedging and other costs relating to the offering of the securities. Our funding considerations are reflected in the fact

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Risk Factors (Continued)**

that we determine the economic terms of the securities based on an assumed funding rate that is generally lower than our secondary market rates. If the costs relating to selling, structuring, hedging and issuing the securities were lower, or if the assumed funding rate we use to determine the economic terms of the securities were higher, the economic terms of the securities would be more favorable to you and the estimated value would be higher.

**The Estimated Value Of The Securities Is Determined By Our Affiliate s Pricing Models, Which May Differ From Those Of Other Dealers.**

The estimated value of the securities was determined for us by WFS using its proprietary pricing models and related market inputs and assumptions referred to above under Investment Description Determining the estimated value. Certain inputs to these models may be determined by WFS in its discretion. WFS s views on these inputs may differ from other dealers views, and WFS s estimated value of the securities may be higher, and perhaps materially higher, than the estimated value of the securities that would be determined by other dealers in the market. WFS s models and its inputs and related assumptions may prove to be wrong and therefore not an accurate reflection of the value of the securities.

**The Estimated Value Of The Securities Is Not An Indication Of The Price, If Any, At Which WFS Or Any Other Person May Be Willing To Buy The Securities From You In The Secondary Market.**

The price, if any, at which WFS or any of its affiliates may purchase the securities in the secondary market will be based on WFS s proprietary pricing models and will fluctuate over the term of the securities as a result of changes in the market and other factors described in the next risk factor. Any such secondary market price for the securities will also be reduced by a bid-offer spread, which may vary depending on the aggregate face amount of the securities to be purchased in the secondary market transaction, and the expected cost of unwinding any related hedging transactions. Unless the factors described in the next risk factor change significantly in your favor, any such secondary market price for the securities is likely to be less than the original offering price.

If WFS or any of its affiliates makes a secondary market in the securities at any time up to the issue date or during the 3-month period following the issue date, the secondary market price offered by WFS or any of its affiliates will be increased by an amount reflecting a portion of the costs associated with selling, structuring, hedging and issuing the securities that are included in the original offering price. Because this portion of the costs is not fully deducted upon issuance, any secondary market price offered by WFS or any of its affiliates during this period will be higher than it would be if it were based solely on WFS s proprietary pricing models less the bid-offer spread and hedging unwind costs described above. The amount of this increase in the secondary market price will decline steadily to zero over this 3-month period. If you hold the securities through an account at WFS or any of its affiliates, we expect that this increase will also be reflected in the value indicated for the securities on your brokerage account statement. If you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, the value of the

securities on your brokerage account statement may be different than if you held your securities at WFS or any of its affiliates, as discussed above under Investment Description.

**The Value Of The Securities Prior To Stated Maturity Will Be Affected By Numerous Factors, Some Of Which Are Related In Complex Ways.**

The value of the securities prior to stated maturity will be affected by the value of each Market Measure at that time, interest rates at that time and a number of other factors, some of which are interrelated in complex ways. The effect of any one factor may be offset or magnified by the effect of another factor. The following factors, which we refer to as the derivative component factors, are expected to affect the value of the securities. When we refer to the value of your security, we mean the value that you could receive for your security if you are able to sell it in the open market before the stated maturity date.

**Performance of the Market Measures.** The value of the securities prior to maturity will depend substantially on the value of each Market Measure. The price at which you may be able to sell the securities before stated maturity may be at a discount, which could be substantial, from their original offering price, if the value of the lowest performing Market Measure at such time is less than, equal to or not sufficiently above its starting value or its threshold value.

**Interest Rates.** The value of the securities may be affected by changes in the interest rates in the U.S. markets.

**Volatility Of The Market Measures.** Volatility is the term used to describe the size and frequency of market fluctuations. The value of the securities may be affected if the volatility of the Market Measures changes.

**Correlation Between The Market Measures.** Correlation refers to the extent to which the values of the Market Measures tend to fluctuate at the same time, in the same direction and in similar magnitudes. The correlation between the Market Measures may be positive, zero or negative. The value of the securities is likely to decrease if the correlation between the Market Measures decreases.

---

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Risk Factors (Continued)**

**Time Remaining To Maturity.** The value of the securities at any given time prior to maturity will likely be different from that which would be expected based on the then-current values of the Market Measures. This difference will most likely reflect a discount due to expectations and uncertainty concerning the values of the Market Measures during the period of time still remaining to the stated maturity date. In general, as the time remaining to maturity decreases, the value of the securities will approach the amount that could be payable at maturity based on the then-current values of the Market Measures.

**Dividend Yields On The Market Measures.** The value of the securities may be affected by the dividend yields on the Market Measures or the securities included in the Market Measures (the amount of such dividends may influence the closing value of the Market Measures).

**Currency Exchange Rates.** Since the Fund includes securities quoted in one or more foreign currencies and the closing value of the Fund is based on the U.S. dollar value of such securities, the value of the securities may be affected if the exchange rate between the U.S. dollar and any such foreign currency changes.

In addition to the derivative component factors, the value of the securities will be affected by actual or anticipated changes in our creditworthiness, as reflected in our secondary market rates. The value of the securities will also be limited by the automatic call feature because if the securities are automatically called, the return will not be greater than the applicable call premium. You should understand that the impact of one of the factors specified above, such as a change in interest rates, may offset some or all of any change in the value of the securities attributable to another factor, such as a change in the value of either or both Market Measures. Because numerous factors are expected to affect the value of the securities, changes in the values of the Market Measures may not result in a comparable change in the value of the securities.

**The Securities Will Not Be Listed On Any Securities Exchange And We Do Not Expect A Trading Market For The Securities To Develop.**

The securities will not be listed or displayed on any securities exchange or any automated quotation system. Although the agent and/or its affiliates may purchase the securities from holders, they are not obligated to do so and are not required to make a market for the securities. There can be no assurance that a secondary market will develop. Because we do not expect that any market makers will participate in a secondary market for the securities, the price at which you may be able to sell your securities is likely to depend on the price, if any, at which the agent is willing to buy your securities. If a secondary market does exist, it may be limited. Accordingly, there may be a limited number of buyers if you decide to sell your securities prior to stated maturity. This may affect the price you receive upon such sale. Consequently, you should be willing to hold the securities to stated maturity.

**Historical Values Of The Market Measures Should Not Be Taken As An Indication Of The Future Performance Of The Market Measures During The Term Of The Securities.**

The trading prices of the securities included in the Index and the trading prices of the shares of the Fund will determine the values of the Market Measures and, therefore, whether the securities will be automatically called prior to stated maturity and the amount payable to you at maturity. As a result, it is impossible to predict whether the closing values of the Market Measures will fall or rise compared to their respective starting values. Trading prices of the securities included in the Index and of the shares of the Fund will be influenced by complex and interrelated political, economic, financial and other factors that can affect the markets in which those securities, the Fund and the securities comprising the Fund are traded and the values of those securities, the Fund and the securities comprising the Fund. Accordingly, any historical values of the Market Measures do not provide an indication of the future performance of the Market Measures.

**Changes That Affect The Index May Adversely Affect The Value Of The Securities And The Amount You Will Receive At Stated Maturity.**

The policies of the index sponsor concerning the calculation of the Index and the addition, deletion or substitution of securities comprising the Index and the manner in which the index sponsor takes account of certain changes affecting such securities may affect the value of the Index and, therefore, may affect the value of the securities, the likelihood of the occurrence of an automatic call and the amount payable at maturity. The index sponsor may discontinue or suspend calculation or dissemination of the Index or materially alter the methodology by which it calculates the Index. Any such actions could adversely affect the value of the securities.

**Changes That Affect The Fund Or The Fund Underlying Index May Adversely Affect The Value Of The Securities And The Amount You Will Receive At Stated Maturity.**

The policies of the sponsor of the Fund (the fund sponsor ) concerning the calculation of the Fund's net asset value, additions, deletions or substitutions of securities in the Fund and the manner in which changes in the fund underlying index are reflected in the Fund, and changes in those policies, could affect the closing price of the shares of the Fund and, therefore, may affect the value of the securities, the likelihood of the occurrence of an automatic call and the amount payable at stated maturity. Similarly, the policies of the sponsor of the fund underlying index (the fund underlying index sponsor ) concerning the calculation of the fund underlying index

---

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Risk Factors (Continued)**

and the addition, deletion or substitution of securities comprising the fund underlying index and the manner in which the fund underlying index sponsor takes account of certain changes affecting such securities may affect the level of the fund underlying index and the closing price of the shares of the Fund and, therefore, may affect the value of the securities, the likelihood of the occurrence of an automatic call and the amount payable at stated maturity. The fund underlying index sponsor could also discontinue or suspend calculation or dissemination of the fund underlying index or materially alter the methodology by which it calculates the fund underlying index. Any such actions could adversely affect the value of the securities.

**We Cannot Control Actions By Any Of The Unaffiliated Companies Whose Securities Are Included In The Index Or The Fund Underlying Indices.**

Actions by any company whose securities are included in the Index or in the fund underlying index may have an adverse effect on the price of its security, the closing value of the related Market Measure on any calculation day and the value of the securities. We are not affiliated with any of the companies included in the Index or in the fund underlying index. These companies will not be involved in the offering of the securities and will have no obligations with respect to the securities, including any obligation to take our or your interests into consideration for any reason. These companies will not receive any of the proceeds of the offering of the securities and will not be responsible for, and will not have participated in, the determination of the timing of, prices for, or quantities of, the securities to be issued. These companies will not be involved with the administration, marketing or trading of the securities and will have no obligations with respect to any amounts to be paid to you on the securities.

**We And Our Affiliates Have No Affiliation With The Index Sponsor, Fund Sponsor Or Fund Underlying Index Sponsor And Have Not Independently Verified Their Public Disclosure Of Information.**

We and our affiliates are not affiliated in any way with the index sponsor, fund sponsor or fund underlying index sponsor (collectively, the sponsors ) and have no ability to control or predict their actions, including any errors in or discontinuation of disclosure regarding the methods or policies relating to the calculation of the applicable Market Measure. We have derived the information about the sponsors and the Market Measures contained in this pricing supplement and the accompanying market measure supplement from publicly available information, without independent verification. You, as an investor in the securities, should make your own investigation into each Market Measure and the sponsors. The sponsors are not involved in the offering of the securities made hereby in any way and have no obligation to consider your interests as an owner of the securities in taking any actions that might affect the value of the securities.

**An Investment Linked To The Shares Of The Fund Is Different From An Investment Linked To The Fund Underlying Index.**

The performance of the shares of the Fund may not exactly replicate the performance of the fund underlying index because the Fund may not invest in all of the securities included in the fund underlying index and because the Fund will reflect transaction costs and fees that are not included in the calculation of the fund underlying index. The Fund may also hold securities or derivative financial instruments not included in the fund underlying index. It is also possible that the Fund may not fully replicate the performance of the fund underlying index due to the temporary unavailability of certain securities in the secondary market or due to other extraordinary circumstances. In addition, because the shares of the Fund are traded on a securities exchange and are subject to market supply and investor demand, the value of a share of the Fund may differ from the net asset value per share of the Fund. As a result, the performance of the Fund may not correlate perfectly with the performance of the fund underlying index, and the return on the securities based on the performance of the Fund will not be the same as the return on securities based on the performance of the fund underlying index.

**You Will Not Have Any Shareholder Rights With Respect To The Shares Of The Fund.**

You will not become a holder of shares of the Fund or a holder of securities included in the fund underlying index as a result of owning a security. You will not have any voting rights, any right to receive dividends or other distributions or any other rights with respect to such shares or securities. You will have no right to receive delivery of any shares or securities at stated maturity or upon automatic call.

**Anti-dilution Adjustments Relating To The Shares Of The Fund Do Not Address Every Event That Could Affect Such Shares.**

An adjustment factor, as described herein, will be used to determine the fund closing price (and thus, the closing value) of the Fund. The adjustment factor will be adjusted by the calculation agent for certain events affecting the shares of the Fund. However, the calculation agent will not make an adjustment for every event that could affect such shares. If an event occurs that does not require the calculation agent to adjust the adjustment factor, the value of the securities may be adversely affected.

---

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Risk Factors (Continued)**

**An Investment In The Securities Is Subject To Risks Associated With Investing In Stocks With A Small Market Capitalization.**

The stocks that constitute the Russell 2000 Index are issued by companies with relatively small market capitalization. These companies often have greater stock price volatility, lower trading volume and less liquidity than large capitalization companies. As a result, the Russell 2000 Index may be more volatile than that of an equity index that does not track solely small capitalization stocks. Stock prices of small capitalization companies are also generally more vulnerable than those of large capitalization companies to adverse business and economic developments, and the stocks of small capitalization companies may be thinly traded, and be less attractive to many investors if they do not pay dividends. In addition, small capitalization companies are typically less well-established and less stable financially than large capitalization companies and may depend on a small number of key personnel, making them more vulnerable to loss of those individuals. Small capitalization companies tend to have lower revenues, less diverse product lines, smaller shares of their target markets, fewer financial resources and fewer competitive strengths than large capitalization companies. These companies may also be more susceptible to adverse developments related to their products or services.

**An Investment In The Securities Is Subject To Risks Associated With Foreign Securities Markets.**

The Fund includes the stocks of foreign companies and you should be aware that investments in securities linked to the value of foreign equity securities involve particular risks. Foreign securities markets may have less liquidity and may be more volatile than the U.S. securities markets, and market developments may affect foreign markets differently than U.S. securities markets. Direct or indirect government intervention to stabilize a foreign securities market, as well as cross-shareholdings in foreign companies, may affect trading prices and volumes in those markets. Also, there is generally less publicly available information about non-U.S. companies that are not subject to the reporting requirements of the Securities and Exchange Commission, and non-U.S. companies are subject to accounting, auditing and financial reporting standards and requirements that differ from those applicable to U.S. reporting companies.

The prices and performance of securities of non-U.S. companies are subject to political, economic, financial, military and social factors which could negatively affect foreign securities markets, including the possibility of recent or future changes in a foreign government's economic, monetary and fiscal policies, the possible imposition of, or changes in, currency exchange laws or other laws or restrictions applicable to foreign companies or investments in foreign equity securities, the possibility of imposition of withholding taxes on dividend income, the possibility of fluctuations in the rate of exchange between currencies, the possibility of outbreaks of hostility or political instability and the possibility of natural disaster or adverse public health developments. Moreover, the relevant non-U.S. economies may differ favorably or unfavorably from the U.S. economy in important respects, such as growth of gross national product, rate of inflation, trade surpluses or deficits, capital reinvestment, resources and self-sufficiency.

The securities included in the Fund may be listed on a foreign stock exchange. A foreign stock exchange may impose trading limitations intended to prevent extreme fluctuations in individual security prices and may suspend trading in certain circumstances. These actions could limit variations in the closing value of the Fund which could, in turn, adversely affect the value of the securities.

**Exchange Rate Movements May Impact The Value Of The Securities.**

The securities will be denominated in U.S. dollars. Since the value of securities included in the Fund is quoted in a currency other than U.S. dollars and, is converted into U.S. dollars, the closing value of the Fund on the call dates and the final calculation day will depend in part on the relevant exchange rates.

**A Call Settlement Date And The Stated Maturity Date May Be Postponed If A Calculation Day Is Postponed.**

A calculation day (including the final calculation day) will be postponed if the applicable originally scheduled calculation day is not a trading day with respect to either Market Measure or if the calculation agent determines that a market disruption event has occurred or is continuing with respect to either Market Measure on that calculation day. If such a postponement occurs with respect to a calculation day other than the final calculation day, then the related call settlement date will be postponed. If such a postponement occurs with respect to the final calculation day, the stated maturity date will be the later of (i) the initial stated maturity date and (ii) three business days after the final calculation day as postponed.

**Our Economic Interests And Those Of Any Dealer Participating In The Offering Are Potentially Adverse To Your Interests.**

You should be aware of the following ways in which our economic interests and those of any dealer participating in the distribution of the securities, which we refer to as a participating dealer, are potentially adverse to your interests as an investor in the securities. In engaging in certain of the activities described below, our affiliates or any participating dealer or its affiliates may take actions that may adversely affect the value of and your return on the securities, and in so doing they will have no obligation to consider your interests as an investor in the securities. Our affiliates or any participating dealer or its affiliates may realize a profit from these activities even if investors do not receive a favorable investment return on the securities.

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Risk Factors (Continued)**

***The calculation agent is our affiliate and may be required to make discretionary judgments that affect the return you receive on the securities.*** WFS, which is our affiliate, will be the calculation agent for the securities. As calculation agent, WFS will determine the closing value of each Market Measure on each calculation day, the ending value of each Market Measure and whether the securities are automatically called and may be required to make other determinations that affect the return you receive on the securities. In making these determinations, the calculation agent may be required to make discretionary judgments, including determining whether a market disruption event has occurred with respect to either Market Measure on a scheduled calculation day, which may result in postponement of that calculation day with respect to each Market Measure; determining the closing value of a Market Measure if a calculation day is postponed to the last day to which it may be postponed and a market disruption event occurs with respect to that Market Measure on that day; adjusting the adjustment factor with respect to the Fund and other terms of the securities in certain circumstances; if the Index is discontinued, selecting a successor index or, if no successor index is available, determining the closing value of the Index on any calculation day; if the Fund undergoes a liquidation event, selecting a successor fund or, if no successor fund is available, determining the closing value of the Fund on the applicable calculation day; and determining whether to adjust the closing value of a Market Measure on a calculation day in the event of certain changes in or modifications to that Market Measure. In making these discretionary judgments, the fact that WFS is our affiliate may cause it to have economic interests that are adverse to your interests as an investor in the securities, and WFS's determinations as calculation agent may adversely affect your return on the securities.

***The estimated value of the securities was calculated by our affiliate and is therefore not an independent third-party valuation.*** WFS calculated the estimated value of the securities set forth on the cover page of this pricing supplement, which involved discretionary judgments by WFS, as described under "Risk Factors: The Estimated Value Of The Securities Is Determined By Our Affiliate's Pricing Models, Which May Differ From Those Of Other Dealers" above. Accordingly, the estimated value of the securities set forth on the cover page of this pricing supplement is not an independent third-party valuation.

***Research reports by our affiliates or any participating dealer or its affiliates may be inconsistent with an investment in the securities and may adversely affect the values of the Market Measures.*** Our affiliates or any participating dealer in the offering of the securities or its affiliates may, at present or in the future, publish research reports on the Market Measures or the companies whose securities are included in the Market Measures. This research is modified from time to time without notice and may, at present or in the future, express opinions or provide recommendations that are inconsistent with purchasing or holding the securities. Any research reports on the Market Measures or the companies whose securities are included in the Market Measures could adversely affect the value of the applicable Market Measure and, therefore, could adversely

affect the value of and your return on the securities. You are encouraged to derive information concerning the Market Measures from multiple sources and should not rely on the views expressed by us or our affiliates or any participating dealer or its affiliates. In addition, any research reports on the Market Measures or the companies whose securities are included in the Market Measures published on or prior to the pricing date could result in an increase in the values of the Market Measures on the pricing date, which would adversely affect investors in the securities by increasing the value at which each Market Measure must close on a calculation day in order for investors in the securities to receive a favorable return.

***Business activities of our affiliates or any participating dealer or its affiliates with the companies whose securities are included in the Market Measures may adversely affect the value of the Market Measures.*** Our affiliates or any participating dealer or its affiliates may, at present or in the future, engage in business with the companies whose securities are included in the Market Measures, including making loans to those companies (including exercising creditors' remedies with respect to such loans), making equity investments in those companies or providing investment banking, asset management or other advisory services to those companies. These business activities could adversely affect the values of the Market Measures and, therefore, could adversely affect the value of and your return on the securities. In addition, in the course of these business activities, our affiliates or any participating dealer or its affiliates may acquire non-public information about one or more of the companies whose securities are included in the Market Measures. If our affiliates or any participating dealer or its affiliates do acquire such non-public information, we and they are not obligated to disclose such non-public information to you.

***Hedging activities by our affiliates or any participating dealer or its affiliates may adversely affect the values of the Market Measures.*** We expect to hedge our obligations under the securities through one or more hedge counterparties, which may include our affiliates or any participating dealer or its affiliates. Pursuant to such hedging activities, our hedge counterparties may acquire shares of the Fund, securities included in the Market Measures or listed or over-the-counter derivative or synthetic instruments related to the Market Measures or such securities. Depending on, among other things,

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Risk Factors (Continued)**

future market conditions, the aggregate amount and the composition of such positions are likely to vary over time. To the extent that our hedge counterparties have a long hedge position in shares of the Fund, any of the securities included in the Market Measures or derivative or synthetic instruments related to the Market Measures or such securities, they may liquidate a portion of such holdings at or about the time of a calculation day or at or about the time of a change in the securities included in the Market Measures. These hedging activities could potentially adversely affect the values of the Market Measures and, therefore, could adversely affect the value of and your return on the securities.

*Trading activities by our affiliates or any participating dealer or its affiliates may adversely affect the values of the Market Measures.* Our affiliates or any participating dealer or its affiliates may engage in trading in shares of the Fund or the securities included in the Market Measures and other instruments relating to the Market Measures or such securities on a regular basis as part of their general broker-dealer and other businesses. Any of these trading activities could potentially adversely affect the values of the Market Measures and, therefore, could adversely affect the value of and your return on the securities.

*A participating dealer or its affiliates may realize hedging profits projected by its proprietary pricing models in addition to any selling concession, creating a further incentive for the participating dealer to sell the securities to you.* If any participating dealer or any of its affiliates conducts hedging activities for us in connection with the securities, that participating dealer or its affiliates will expect to realize a projected profit from such hedging activities and this projected profit will be in addition to any concession that the participating dealer realizes for the sale of the securities to you. This additional projected profit may create a further incentive for the participating dealer to sell the securities to you.

**The U.S. Federal Tax Consequences Of An Investment In The Securities Are Unclear.**

There is no direct legal authority regarding the proper U.S. federal tax treatment of the securities, and we do not plan to request a ruling from the IRS. Consequently, significant aspects of the tax treatment of the securities are uncertain, and the IRS or a court might not agree with the treatment of the securities as prepaid derivative contracts that are open transactions for U.S. federal income tax purposes. For example, a security may be treated as a constructive ownership transaction, with potentially adverse consequences described below under United States Federal Tax Considerations. If the IRS were successful in asserting an alternative treatment of the securities, the tax consequences of the ownership and disposition of the securities might be materially and adversely affected. In addition, in 2007 the U.S. Treasury Department and the IRS released a notice requesting comments on various issues regarding the U.S. federal income tax treatment of prepaid forward contracts and similar instruments. Any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, including the character and timing of income or loss and the degree, if any, to which

income realized by non-U.S. persons should be subject to withholding tax, possibly with retroactive effect. You should read carefully the discussion under United States Federal Tax Considerations in this pricing supplement. You should also consult your tax adviser regarding the U.S. federal tax consequences of an investment in the securities, as well as tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

PRS-19

**Market Linked Securities Auto-Callable with Contingent Absolute****Return and Buffered Downside With Multiplier****Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the****iShares® MSCI EAFE ETF due May 15, 2018****Hypothetical Returns****If the securities are automatically called:**

Assuming that the securities are automatically called, the following table illustrates, for each hypothetical call date on which the securities are automatically called:

the hypothetical payment per security on the related call settlement date;

the hypothetical pre-tax total rate of return; and

the hypothetical pre-tax annualized rate of return.

<b>Hypothetical call date on which securities are automatically called</b>	<b>Hypothetical payment per security on related call settlement date</b>	<b>Hypothetical pre-tax total rate of return</b>	<b>Hypothetical pre-tax annualized rate of return<sup>(1)</sup></b>
1st call date	\$1,045.25	4.525%	9.13%
2nd call date	\$1,090.50	9.05%	8.85%
3rd call date	\$1,135.75	13.575%	8.69%

<sup>(1)</sup> The annualized rates of return are calculated with compounding on a semi-annual basis.

**If the securities are not automatically called:**

Assuming that the securities are not automatically called, the following table illustrates, for a range of hypothetical market measure performances of the lowest performing Market Measure on the final calculation day:

the hypothetical payment at stated maturity per security;

the hypothetical pre-tax total rate of return; and

the hypothetical pre-tax annualized rate of return.

Hypothetical market measure performance of the lowest performing Market Measure on the final calculation day <sup>(1)</sup>	Hypothetical payment at stated maturity per security	Hypothetical pre-tax total rate of return	Hypothetical pre-tax annualized rate of return <sup>(2)</sup>
-1.00%	\$1,010.00	1.00%	0.67%
-5.00%	\$1,050.00	5.00%	3.29%
-10.00%	\$1,100.00	10.00%	6.47%
-20.00%	\$1,200.00	20.00%	12.57%
-21.00%	\$987.50	-1.25%	-0.84%
-25.00%	\$937.50	-6.25%	-4.27%
-50.00%	\$625.00	-37.50%	-29.08%
-75.00%	\$312.50	-68.75%	-64.42%

(1) The market measure performance of the lowest performing Market Measure on the final calculation day is equal to the percentage change from its starting value to its ending value (i.e., ending value *minus* starting value, *divided* by starting value).

(2) The annualized rates of return are calculated with compounding on a semi-annual basis.

The above figures are for purposes of illustration only and may have been rounded for ease of analysis. The actual amount you will receive upon an automatic call or at stated maturity and the resulting pre-tax rate of return will depend on (i) the Market Measure that is the lowest performing Market Measure on each call date; (ii) whether the securities are automatically called; (ii) if the securities are automatically called, the actual call date on which the securities are called; and (iii) if the securities are not automatically called, the actual ending value of the lowest performing Market Measure on the final calculation day.

**Market Linked Securities Auto-Callable with Contingent Absolute****Return and Buffered Downside With Multiplier****Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the****iShares® MSCI EAFE ETF due May 15, 2018****Hypothetical Payment at Stated Maturity**

If the closing value of the lowest performing Market Measure is less than its starting value on each of the first two call dates, the securities will not be automatically called prior to the final calculation day, and you will receive a payment at stated maturity that will be greater than or less than the original offering price per security, depending on the ending value of the lowest performing Market Measure on the final calculation day. Set forth below are three examples of calculations of the payment at stated maturity, assuming that the securities have not been automatically called on either of the first two call dates and assuming the hypothetical ending value for each Market Measure indicated in the examples. These examples are for purposes of illustration only and the values used in the examples may have been rounded for ease of analysis.

**Example 1. The ending value of the lowest performing Market Measure on the final calculation day is greater than its starting value, the securities are automatically called on the final calculation day and the payment at stated maturity is equal to the original offering price plus the applicable call premium:**

	<b>Russell 2000 Index</b>	<b>iShares MSCI EAFE ETF</b>
<b>Starting value:</b>	1232.162	\$57.56
<b>Hypothetical ending value:</b>	1725.027	\$71.95
<b>Performance factor (ending value <i>divided by</i> starting value):</b>	140.00%	125.00%

**Step 1:** Determine which Market Measure is the lowest performing Market Measure on the final calculation day.

In this example, the iShares MSCI EAFE ETF has the lowest performance factor and is, therefore, the lowest performing Market Measure on the final calculation day.

**Step 2:** Determine the payment at stated maturity based on the ending value of the lowest performing Market Measure on the final calculation day.

Since the hypothetical ending value of the lowest performing Market Measure on the final calculation day is greater than its starting value, the securities are automatically called on the final calculation day and you will receive the original offering price of your securities plus a call premium of 13.575% of the original offering price per security. Even though the lowest performing Measure on the final calculation day appreciated by 25.00% from its starting value to its ending value in this example, your return is limited to the call premium of 13.575% that is applicable to the final calculation day.

On the stated maturity date, you would receive \$1,135.75 per security.

**Market Linked Securities Auto-Callable with Contingent Absolute****Return and Buffered Downside With Multiplier****Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the****iShares® MSCI EAFE ETF due May 15, 2018****Hypothetical Payment at Stated Maturity (Continued)**

**Example 2.** The ending value of the lowest performing Market Measure on the final calculation day is less than its starting value but greater than its threshold value, and the payment at maturity is equal to the original offering price plus a return equal to the absolute value of the market measure performance of the lowest performing Market Measure on the final calculation day:

	<b>Russell 2000 Index</b>	<b>iShares MSCI EAFE ETF</b>
<b>Starting value:</b>	1232.162	\$57.56
<b>Hypothetical ending value:</b>	1108.946	\$69.07
<b>Threshold value:</b>	985.7296	\$46.048
<b>Performance factor (ending value <i>divided by</i> starting value):</b>	90.00%	120.00%
<b>Market measure performance (ending value <i>minus</i> starting value, <i>divided by</i> starting value)</b>	-10.00%	20.00%

**Step 1:** Determine which Market Measure is the lowest performing Market Measure on the final calculation day.

In this example, the Russell 2000 Index has the lowest performance factor and is, therefore, the lowest performing Market Measure on the final calculation day.

**Step 2:** Determine the payment at stated maturity based on the ending value of the lowest performing Market Measure on the final calculation day.

Since the hypothetical ending value of the lowest performing Market Measure on the final calculation day is less than its starting value, but not by more than 20%, you will receive the original offering price of your securities plus a return equal to the absolute value of the market measure performance of the lowest performing Market Measure on the final calculation day. The payment at maturity would be calculated as follows:

= \$1,000 + (\$1,000 × absolute value of the market measure performance of the lowest performing Market Measure on the final calculation day)

= \$1,000 + (\$1,000 × |-10.00%|)

= \$1,000 + 100.00

= \$1,100.00

On the stated maturity date, you would receive \$1,100.00 per security.

PRS-22

**Market Linked Securities Auto-Callable with Contingent Absolute****Return and Buffered Downside With Multiplier****Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the iShares® MSCI EAFE ETF due May 15, 2018****Hypothetical Payment at Stated Maturity (Continued)**

**Example 3. The ending value of the lowest performing Market Measure on the final calculation day is less than its threshold value and the payment at stated maturity is less than the original offering price:**

	iShares MSCI	
	Russell 2000 Index	EAFE ETF
<b>Starting value:</b>	1232.162	\$57.56
<b>Hypothetical ending value:</b>	1478.594	\$25.90
<b>Threshold value:</b>	985.7296	\$46.048
<b>Performance factor (ending value <i>divided by</i> starting value):</b>	120.00%	45.00%

**Step 1:** Determine which Market Measure is the lowest performing Market Measure on the final calculation day.

In this example, the iShares MSCI EAFE ETF has the lowest performance factor and is, therefore, the lowest performing Market Measure on the final calculation day.

**Step 2:** Determine the payment at stated maturity based on the ending value of the lowest performing Market Measure on the final calculation day.

Since the hypothetical ending value of the lowest performing Market Measure on the final calculation day is less than its starting value by more than 20%, you would lose a portion of the original offering price of your securities and receive a payment at stated maturity equal to:

$$= \$1,000 \times \text{performance factor of the lowest performing Market Measure on the final calculation day} \times \text{multiplier}$$

$$= \$1000 \times 45.00\% \times 1.25$$

$$= \$562.50$$

On the stated maturity date, you would receive \$562.50 per security, resulting in a loss of 43.75%. As this example illustrates, if either Market Measure depreciates by more than 20% from its starting value to its ending value, you will incur a loss on the securities at maturity, even if the other Market Measure has appreciated.

To the extent that the ending value of the lowest performing Market Measure differs from the values assumed above, the results indicated above would be different.

**Additional Terms of the Securities**

Wells Fargo will issue the securities as part of a series of senior unsecured debt securities entitled Medium-Term Notes, Series K, which is more fully described in the prospectus supplement. Information included in this pricing supplement supersedes information in the market measure supplement, prospectus supplement and prospectus to the extent that it is different from that information.

**Certain Definitions**

A trading day with respect to the Index means a day, as determined by the calculation agent, on which (i) the relevant stock exchanges with respect to each security underlying the Index are scheduled to be open for trading for their respective regular trading sessions and (ii) each related futures or options exchange is scheduled to be open for trading for its regular trading session. The relevant stock exchange for any security underlying the Index means the primary exchange or quotation system on which such security is traded, as determined by the calculation agent. The related futures or options exchange for the Index means an exchange or quotation system where trading has a material effect (as determined by the calculation agent) on the overall market for futures or options contracts relating to the Index.

A trading day with respect to the Fund means a day, as determined by the calculation agent, on which the relevant stock exchange and each related futures or options exchange with respect to the Fund are scheduled to be open for trading for their respective regular trading sessions. The relevant stock exchange for the Fund means the primary exchange or quotation system on which shares (or other applicable securities) of the Fund are traded, as determined by the calculation agent. The related futures or options exchange for the Fund means each exchange or quotation system where trading has a material effect (as determined by the calculation agent) on the overall market for futures or options contracts relating to the Fund.

**Calculation Agent**

Wells Fargo Securities, LLC, one of our subsidiaries, will act as calculation agent for the securities and may appoint agents to assist it in the performance of its duties. Pursuant to a calculation agent agreement, we may appoint a different calculation agent without your consent and without notifying you.

The calculation agent will determine whether the securities are automatically called on any of the call dates and the amount of the payment you receive upon automatic call or at stated maturity. In addition, the calculation agent will, among other things:

determine whether a market disruption event has occurred;

determine the closing values of the Market Measures under certain circumstances;

determine if adjustments are required to the closing value of a Market Measure under various circumstances;

if publication of the Index is discontinued, select a successor equity index (as defined below) or, if no successor equity index is available, determine the closing value of the Index; and

if the Fund undergoes a liquidation event, select a successor fund (as defined below) or, if no successor fund is available, determine the closing value of the Fund.

All determinations made by the calculation agent will be at the sole discretion of the calculation agent and, in the absence of manifest error, will be conclusive for all purposes and binding on us and you. The calculation agent will have no liability for its determinations.

### **Market Disruption Events**

A market disruption event with respect to the Index means any of the following events as determined by the calculation agent in its sole discretion:

- (A) The occurrence or existence of a material suspension of or limitation imposed on trading by the relevant stock exchanges or otherwise relating to securities which then comprise 20% or more of the level of the Index or any successor equity index at any time during the one-hour period that ends at the close of trading on that day, whether by reason of movements in price exceeding limits permitted by those relevant stock exchanges or otherwise.
- (B) The occurrence or existence of a material suspension of or limitation imposed on trading by any related futures or options exchange or otherwise in futures or options contracts relating to the Index or any successor equity index on any related futures or options exchange at any time during the one-hour period that ends at the close of trading on that day, whether by reason of movements in price exceeding limits permitted by the related futures or options exchange or otherwise.
- (C) The occurrence or existence of any event, other than an early closure, that materially disrupts or impairs the ability of market participants in general to effect transactions in, or obtain market values for, securities that then comprise 20% or

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Additional Terms of the Securities (Continued)**

more of the level of the Index or any successor equity index on their relevant stock exchanges at any time during the one-hour period that ends at the close of trading on that day.

- (D) The occurrence or existence of any event, other than an early closure, that materially disrupts or impairs the ability of market participants in general to effect transactions in, or obtain market values for, futures or options contracts relating to the Index or any successor equity index on any related futures or options exchange at any time during the one-hour period that ends at the close of trading on that day.
- (E) The closure on any exchange business day of the relevant stock exchanges on which securities that then comprise 20% or more of the level of the Index or any successor equity index are traded or any related futures or options exchange with respect to the Index or any successor equity index prior to its scheduled closing time unless the earlier closing time is announced by the relevant stock exchange or related futures or options exchange, as applicable, at least one hour prior to the earlier of (1) the actual closing time for the regular trading session on such relevant stock exchange or related futures or options exchange, as applicable, and (2) the submission deadline for orders to be entered into the relevant stock exchange or related futures or options exchange, as applicable, system for execution at such actual closing time on that day.
- (F) The relevant stock exchange for any security underlying the Index or successor equity index or any related futures or options exchange with respect to the Index or successor equity index fails to open for trading during its regular trading session.

For purposes of determining whether a market disruption event has occurred with respect to the Index:

- (1) the relevant percentage contribution of a security to the level of the Index or any successor equity index will be based on a comparison of (x) the portion of the level of the Index attributable to that security and (y) the overall level of the Index or successor equity index, in each case immediately before the occurrence of the market disruption event;
- (2) the close of trading on any trading day for the Index or any successor equity index means the scheduled closing time of the relevant stock exchanges with respect to the securities underlying the Index or successor equity index on such trading day; provided that, if the actual closing time of the regular trading session of any such relevant stock exchange is earlier than its scheduled closing time on such trading day, then (x) for

purposes of clauses (A) and (C) of the definition of market disruption event above, with respect to any security underlying the Index or successor equity index for which such relevant stock exchange is its relevant stock exchange, the close of trading means such actual closing time and (y) for purposes of clauses (B) and (D) of the definition of market disruption event above, with respect to any futures or options contract relating to the Index or successor equity index, the close of trading means the latest actual closing time of the regular trading session of any of the relevant stock exchanges, but in no event later than the scheduled closing time of the relevant stock exchanges;

- (3) the scheduled closing time of any relevant stock exchange or related futures or options exchange on any trading day for the Index or any successor equity index means the scheduled weekday closing time of such relevant stock exchange or related futures or options exchange on such trading day, without regard to after hours or any other trading outside the regular trading session hours; and
- (4) an exchange business day means any trading day for the Index or any successor equity index on which each relevant stock exchange for the securities underlying the Index or any successor equity index and each related futures or options exchange with respect to the Index or any successor equity index are open for trading during their respective regular trading sessions, notwithstanding any such relevant stock exchange or related futures or options exchange closing prior to its scheduled closing time.

A market disruption event with respect to the Fund means any of the following events as determined by the calculation agent in its sole discretion:

- (A) The occurrence or existence of a material suspension of or limitation imposed on trading by the relevant stock exchange or otherwise relating to the shares (or other applicable securities) of the Fund or any successor fund (as defined below) on the relevant stock exchange at any time during the one-hour period that ends at the close of trading on such day, whether by reason of movements in price exceeding limits permitted by such relevant stock exchange or otherwise.
- (B) The occurrence or existence of a material suspension of or limitation imposed on trading by any related futures or options exchange or otherwise in futures or options contracts relating to the shares (or other applicable securities) of the Fund or any successor fund on any related futures or options exchange at any time during the one-hour period that ends at the close

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Additional Terms of the Securities (Continued)**

of trading on that day, whether by reason of movements in price exceeding limits permitted by the related futures or options exchange or otherwise.

- (C) The occurrence or existence of any event, other than an early closure, that materially disrupts or impairs the ability of market participants in general to effect transactions in, or obtain market values for, shares (or other applicable securities) of the Fund or any successor fund on the relevant stock exchange at any time during the one-hour period that ends at the close of trading on that day.
- (D) The occurrence or existence of any event, other than an early closure, that materially disrupts or impairs the ability of market participants in general to effect transactions in, or obtain market values for, futures or options contracts relating to shares (or other applicable securities) of the Fund or any successor fund on any related futures or options exchange at any time during the one-hour period that ends at the close of trading on that day.
- (E) The closure of the relevant stock exchange or any related futures or options exchange with respect to the Fund or any successor fund prior to its scheduled closing time unless the earlier closing time is announced by the relevant stock exchange or related futures or options exchange, as applicable, at least one hour prior to the earlier of (1) the actual closing time for the regular trading session on such relevant stock exchange or related futures or options exchange, as applicable, and (2) the submission deadline for orders to be entered into the relevant stock exchange or related futures or options exchange, as applicable, system for execution at the close of trading on that day.
- (F) The relevant stock exchange or any related futures or options exchange with respect to the Fund or any successor fund fails to open for trading during its regular trading session.

For purposes of determining whether a market disruption event has occurred with respect to the Fund:

- (1) close of trading means the scheduled closing time of the relevant stock exchange with respect to the Fund or any successor fund; and
- (2)

the scheduled closing time of the relevant stock exchange or any related futures or options exchange on any trading day for the Fund or any successor fund means the scheduled weekday closing time of such relevant stock exchange or related futures or options exchange on such trading day, without regard to after hours or any other trading outside the regular trading session hours.

If a market disruption event occurs or is continuing with respect to either Market Measure on any calculation day, then such calculation day will be postponed for each Market Measure to the first succeeding day that is a trading day for each Market Measure and on which a market disruption event has not occurred and is not continuing for either Market Measure; however, if such first succeeding trading day has not occurred as of the eighth day that is a trading day for each Market Measure after the originally scheduled calculation day, that eighth day shall be deemed to be the calculation day for each Market Measure. If a calculation day has been postponed to that eighth day and a market disruption event occurs or is continuing with respect to either Market Measure on that eighth day, the calculation agent will determine the closing value of that Market Measure on that day (i) in the case of the Index, in accordance with the formula for and method of calculating the closing level of the Index last in effect prior to commencement of the market disruption event, using the closing price (or, with respect to any relevant security, if a market disruption event has occurred with respect to such security, its good faith estimate of the value of such security at the scheduled closing time of the relevant stock exchange for such security or, if earlier, the actual closing time of the regular trading session of such relevant stock exchange) on that day of each security included in the Index and (ii) in the case of the Fund, based on its good faith estimate of the value of the shares (or other applicable securities) of the Fund as of the close of trading on that day. As used in clause (i) of the immediately preceding sentence, closing price means, with respect to any security on any date, the relevant stock exchange traded or quoted price of such security as of the scheduled closing time of the relevant stock exchange for such security or, if earlier, the actual closing time of the regular trading session of such relevant stock exchange.

#### **Adjustments to the Index**

If at any time a sponsor or publisher of the Index (the index sponsor ) makes a material change in the formula for or the method of calculating the Index, or in any other way materially modifies the Index (other than a modification prescribed in that formula or method to maintain the Index in the event of changes in constituent stock and capitalization and other routine events), then, from and after that time, the calculation agent will, at the close of business in New York, New York, on each date that the closing level of the

**Market Linked Securities Auto-Callable with Contingent Absolute**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Additional Terms of the Securities (Continued)**

Index is to be calculated, calculate a substitute closing level of the Index in accordance with the formula for and method of calculating the Index last in effect prior to the change, but using only those securities that comprised the Index immediately prior to that change. Accordingly, if the method of calculating the Index is modified so that the level of the Index is a fraction or a multiple of what it would have been if it had not been modified, then the calculation agent will adjust the Index in order to arrive at a level of the Index as if it had not been modified.

**Discontinuance of the Index**

If the index sponsor discontinues publication of the Index, and such index sponsor or another entity publishes a successor or substitute equity index that the calculation agent determines, in its sole discretion, to be comparable to the Index (a successor equity index ), then, upon the calculation agent's notification of that determination to the trustee and Wells Fargo, the calculation agent will substitute the successor equity index as calculated by the relevant index sponsor or any other entity for purposes of calculating the closing level of the Index on any date of determination. Upon any selection by the calculation agent of a successor equity index, Wells Fargo will cause notice to be given to holders of the securities.

In the event that the index sponsor discontinues publication of the Index prior to, and the discontinuance is continuing on, a calculation day and the calculation agent determines that no successor equity index is available at such time, the calculation agent will calculate a substitute closing level for the Index in accordance with the formula for and method of calculating the Index last in effect prior to the discontinuance, but using only those securities that comprised the Index immediately prior to that discontinuance. If a successor equity index is selected or the calculation agent calculates a level as a substitute for the Index, the successor equity index or level will be used as a substitute for the Index for all purposes, including the purpose of determining whether a market disruption event exists.

If on a calculation day the index sponsor fails to calculate and announce the level of the Index, the calculation agent will calculate a substitute closing level of the Index in accordance with the formula for and method of calculating the Index last in effect prior to the failure, but using only those securities that comprised the Index immediately prior to that failure; *provided* that, if a market disruption event occurs or is continuing on such day with respect to the Index, then the provisions set forth above under **Market Disruption Events** shall apply in lieu of the foregoing.

Notwithstanding these alternative arrangements, discontinuance of the publication of, or the failure by the relevant index sponsor to calculate and announce the level of, the Index may adversely affect the value of the securities.

**Anti-dilution Adjustments Relating to the Fund; Alternate Calculation**

***Anti-dilution Adjustments***

The calculation agent will adjust the adjustment factor with respect to the Fund as specified below if any of the events specified below occurs with respect to the Fund and the effective date or ex-dividend date, as applicable, for such event is after the pricing date and on or prior to the final calculation day.

The adjustments specified below do not cover all events that could affect the Fund, and there may be other events that could affect the Fund for which the calculation agent will not make any such adjustments, including, without limitation, an ordinary cash dividend. Nevertheless, the calculation agent may, in its sole discretion, make additional adjustments to any terms of the securities upon the occurrence of other events that affect or could potentially affect the market price of, or shareholder rights in, the Fund, with a view to offsetting, to the extent practical, any such change, and preserving the relative investment risks of the securities. In addition, the calculation agent may, in its sole discretion, make adjustments or a series of adjustments that differ from those described herein if the calculation agent determines that such adjustments do not properly reflect the economic consequences of the events specified in this pricing supplement or would not preserve the relative investment risks of the securities. All determinations made by the calculation agent in making any adjustments to the terms of the securities, including adjustments that are in addition to, or that differ from, those described in this pricing supplement, will be made in good faith and a commercially reasonable manner, with the aim of ensuring an equitable result. In determining whether to make any adjustment to the terms of the securities, the calculation agent may consider any adjustment made by the Options Clearing Corporation or any other equity derivatives clearing organization on options contracts on the affected Fund.

For any event described below, the calculation agent will not be required to adjust the adjustment factor unless the adjustment would result in a change to the adjustment factor then in effect of at least 0.10%. The adjustment factor resulting from any adjustment will be rounded up or down, as appropriate, to the nearest one-hundred thousandth.

**Market Linked Securities Auto-Callable with Contingent Absolute**

**Return and Buffered Downside With Multiplier**

**Principal at Risk Securities Linked to the Lowest Performing of the Russell 2000® Index and the**

**iShares® MSCI EAFE ETF due May 15, 2018**

**Additional Terms of the Securities (Continued)**

*(A) Stock Splits and Reverse Stock Splits*

If a stock split or reverse stock split has occurred, then once such split has become effective, the adjustment factor will be adjusted to equal the product of the prior adjustment factor and the number of securities which a holder of one share (or other applicable security) of the Fund before the effective date of such stock split or reverse stock split would have owned or been entitled to receive immediately following the applicable effective date.

*(B) Stock Dividends*

If a dividend or distribution of shares (or other applicable securities) to which the securities are linked has been made by the Fund ratably to all holders of record of such shares (or other applicable security), then the adjustment factor will be adjusted on the ex-dividend date to equal the prior adjustment factor plus the product of the prior adjustment factor and the number of shares (or other applicable security) of the Fund which a holder of one share (or other applicable security) of the Fund before the ex-dividend date would have owned or been entitled to receive immediately following that date; provided, however, that no adjustment will be made for a distribution for which the number of securities of the Fund paid or distributed is based on a fixed cash equivalent value.

*(C) Extraordinary Dividends*

If an extraordinary dividend (as defined below) has occurred, then the adjustment factor will be adjusted on the ex-dividend date to equal the product of the prior adjustment factor and a fraction, the numerator of which is the closing price per share (or other applicable security) of the Fund on the trading day preceding the ex-dividend date, and the denominator of which is the amount by which the closing price per share (or other applicable security) of the Fund on the trading day preceding the ex-dividend date exceeds the extraordinary dividend amount (as defined below).

For purposes of determining whether an extraordinary dividend has occurred:

- (1) extraordinary dividend means any cash dividend or distribution (or portion thereof) that the calculation agent determines, in its sole discretion, is extraordinary or special; and
- (2) extraordinary dividend amount with respect to an extraordinary dividend for the securities of the Fund will equal the amount per share (or other applicable security) of the Fund of the applicable cash dividend or distribution that is attributable to the extraordinary dividend, as determined by the calculation agent in its sole discretion.

A distribution on the securities of the Fund described below under the section entitled **Reorganization Events** below that also constitutes an extraordinary dividend will only cause an adjustment pursuant to that **Reorganization Events** section.

*(D) Other Distributions*

If the Fund declares or makes a distribution to all holders of the shares (or other applicable security) of the Fund of any non-cash assets, excluding dividends or distributions described under the section entitled **Stock Dividends** above, then the calculation agent may, in its sole discretion, make such adjustment (if any) to the adjustment factor as it deems appropriate in the circumstances. If the calculation agent determines to make an adjustment pursuant to this paragraph, it will do so with a view to offsetting, to the extent practical, any change in the economic position of a holder of the securities that results solely from the applicable event.

*(E) Reorganization Events*

If the Fund, or any successor fund, is subject to a merger, combination, consolidation or statutory exchange of securities with another exchange traded fund, and the Fund is not the surviving entity (a reorganization event ), then, on or after the date of such event, the calculation agent shall, in its sole discretion, make an adjustment to the adjustment factor or the method of determining the payment at maturity, whether the securities are automatically called on any of the call dates or any other terms of the securities as the calculation agent determines appropriate to account for the economic effect on the securities of such event, and determine the effective date of that adjustment. If the calculation agent determines that no adjustment that it could make will produce a commercially reasonable result, then the calculation agent may deem such event a liquidation event (as defined below).

*Liquidation Events*

If the Fund is de-listed, liquidated or otherwise terminated (a liquidation event ), and a successor or substitute exchange traded fund exists that the calculation agent determines, in its sole discretion, to be comparable to the Fund, then, upon the calculation agent's notification of that determination to the trustee and Wells Fargo, any subsequent fund closing price for the Fund will be determined by reference to the fund closing price of the successor or substitute exchange traded fund (such exchange traded fund being referred to

**Additional Terms of the Securities (Continued)**

herein as a successor fund ), with such adjustments as the calculation agent determines are appropriate to account for the economic effect of such substitution on holders of the securities.

If the Fund undergoes a liquidation event prior to, and such liquidation event is continuing on, the date that the fund closing price of the Fund is to be determined and the calculation agent determines that no successor fund is available at such time, then the calculation agent will, in its discretion, calculate the fund closing price for the Fund on such date by a computation methodology that the calculation agent determines will as closely as reasonably possible replicate the Fund, provided that if the calculation agent determines in its discretion that it is not practicable to replicate the Fund (including but not limited to the instance in which the fund underlying index sponsor discontinues publication of the fund underlying index), then the calculation agent will calculate the fund closing price for the Fund in accordance with the formula last used to calculate the fund closing price before such liquidation event, but using only those securities that were held by the Fund immediately prior to such liquidation event without any rebalancing or substitution of such securities following such liquidation event.

If a successor fund is selected or the calculation agent calculates the fund closing price as a substitute for the Fund, such successor fund or fund closing price will be used as a substitute for the Fund for all purposes, including for purposes of determining whether a market disruption event exists. Notwithstanding these alternative arrangements, a liquidation event with respect to the Fund may adversely affect the value of the securities.

If any event is both a reorganization event and a liquidation event, such event will be treated as a reorganization event for purposes of the securities unless the calculation agent makes the determination referenced in the last sentence of the section entitled **Anti-dilution Adjustments Reorganization Events** above.

***Alternate Calculation***

If at any time the method of calculating the Fund or a successor fund, or the related fund underlying index, is changed in a material respect, or if the Fund or a successor fund is in any other way modified so that the Fund does not, in the opinion of the calculation agent, fairly represent the price of the securities of the Fund or such successor fund had such changes or modifications not been made, then the calculation agent may, at the close of business in New York City on the date that the fund closing price is to be determined, make such calculations and adjustments as, in the good faith judgment of the calculation agent, may be necessary in order to arrive at a closing price of the Fund comparable to the Fund or such successor fund, as the case may be, as if such changes or modifications had not been made, and calculate the fund closing price and the payment at maturity and determine whether the securities are automatically called on any call date with reference to such adjusted closing price of the Fund or such successor fund, as applicable.

**Events of Default and Acceleration**

If an event of default with respect to the securities has occurred and is continuing, the amount payable to a holder of a security upon any acceleration permitted by the securities, with respect to each security, will be equal to the amount payable on the securities on the maturity date, calculated as provided herein, as though the date of acceleration were the final calculation day; provided that if the closing value of the lowest performing Market Measure on the date of acceleration is equal to or greater than its starting value, then the amount payable on the securities will be calculated using a call premium that is prorated to the date of acceleration.

**The iShares® MSCI EAFE ETF**

The iShares MSCI EAFE ETF seeks investment results that correspond generally to the price and yield performance, before fees and expenses, of the MSCI EAFE Index, an equity index that is designed to measure equity performance in developed markets, excluding the United States and Canada. See Description of Exchange Traded Funds The iShares® MSCI EAFE ETF in the accompanying market measure supplement for additional information about the iShares MSCI EAFE ETF.

MSCI, Inc. has announced that, effective with the November 2015 semi-annual index review, companies traded outside of their country of classification (i.e., foreign listed companies ) will become eligible for inclusion in the component country indices included in the MSCI EAFE Index. In order for a component country index to be eligible to include foreign listed companies, it must meet the Foreign Listing Materiality Requirement. To meet the Foreign Listing Materiality Requirement, the aggregate market capitalization of all securities represented by foreign listings should represent at least (i) 5% of the free float-adjusted market capitalization of the relevant component country index and (ii) 0.05% of the free-float adjusted market capitalization of the MSCI ACWI Investable Market Index (an index that measures equity performance in both the developed and emerging markets). In connection with the November 2015 semi-annual index review, three of the component country indices included in the MSCI EAFE Index, the MSCI Hong Kong Index, the MSCI Israel Index and the MSCI Netherlands Index, became eligible to include foreign listed companies. The newly eligible foreign listed securities were added at half their free float-adjusted market capitalization as part of the November 2015 semi-annual index review, and their remaining free float-adjusted market capitalization were added as part of the May 2016 semi-annual index review.

The information about the MSCI EAFE Index contained herein updates the information included in the accompanying market measure supplement. See Description of Equity Indices The MSCI EAFE Index in the accompanying market measure supplement for additional information about the MSCI EAFE Index.

**Historical Information**

We obtained the closing values of the iShares MSCI EAFE ETF listed below from Bloomberg Financial Markets without independent verification.

The following graph sets forth daily closing values of the iShares MSCI EAFE ETF for the period from January 1, 2006 to November 9, 2016. The closing value on November 9, 2016 was \$57.56. The historical performance of the iShares MSCI EAFE ETF should not be taken as an indication of the future performance of the iShares MSCI EAFE ETF during the term of the securities.
