Investment description	

Linked to an ETF Basket comprised of the SPDR[®] S&P 500[®] ETF Trust (50%); the iShares[®] Russell 2000 ETF (15%); the iShares[®] MSCI EAFE ETF (15%); the iShares[®] MSCI Emerging Markets ETF (10%); the PowerShares[®] DB Commodity Index Tracking Fund (5%); and the Vanguard[®] REIT ETF (5%)

Unlike ordinary debt securities, the securities do not pay interest or repay a fixed amount of principal at maturity. Instead, the securities provide for a payment at maturity that may be greater than, equal to or less than the original offering price of the securities, depending on the performance of the Basket from its starting price to its ending price. The payment at maturity will reflect the following terms:

o If the value of the Fund increases:

You will receive the original offering price plus 150% participation in the upside performance of the Basket, subject to a maximum total return at maturity of 54% of the original offering price

o If the value of the Basket decreases but the decrease is not more than 15%:

You will be repaid the original offering price

o If the value of the Fund decreases by more than 15%:

You will receive less than the original offering price and will have 1-to-1 downside exposure to the decrease in the value of the Basket in excess of 15%

Investors may lose up to 85% of the original offering price

All payments on the securities are subject to the credit risk of Wells Fargo & Company, and you will have no ability to pursue the shares of the basket components or any securities held by the basket components for payment; if Wells Fargo & Company defaults on its obligations, you could lose some or all of your investment

No periodic interest payments or dividends

No exchange listing; designed to be held to maturity

On the date of the accompanying pricing supplement, the estimated value of the securities is \$931.98 per security. The estimated value of the securities was determined for the issuer by Wells Fargo Securities, LLC using its proprietary pricing models. It is not an indication of actual profit to the issuer or to Wells Fargo Securities, LLC or any of the issuer's other affiliates, nor is it an indication of the price, if any, at which Wells Fargo Securities, LLC or any other person may be willing to buy the securities from you at any time after issuance. See "Investment Description" in the accompanying pricing supplement.

The securities have complex features and investing in the securities involves risks not associated with an investment in conventional debt securities. See "Selected Risk Considerations" in this term sheet, "Selected Risk Considerations" in the accompanying pricing supplement and "Risk Factors" in the accompanying product supplement.

This final term sheet should be read in conjunction with the accompanying pricing supplement, product supplement, market measure supplement, prospectus supplement, and prospectus.

Each security has an original offering price of \$1,000.

(1) The annualized rates of return are calculated on a semi-annual bond equivalent basis with compounding.

(2) The starting price.

The above figures are for purposes of illustration only and may have been rounded for ease of analysis. The actual amount you receive at stated maturity and the resulting pre-tax rate of return will depend on the actual ending price.

How the redemption amount is calculated

The redemption amount payable at maturity will be determined as follows:

If the ending price is greater than the starting price, the redemption amount will be equal to the lesser of:

(i) \$1,000 *plus*

$$\$1,000 \times \frac{\text{ending price} - \text{starting price}}{\text{starting price}} \times \text{participation rate} \quad ; \text{ and}$$

(ii) the capped value

If the ending price is less than or equal to the starting price, but greater than or equal to the threshold price, the redemption amount will be equal to \$1,000

If the ending price is less than the threshold price, the redemption amount will be equal to \$1,000 *minus*

$$\$1,000 \times \frac{\text{threshold price} - \text{ending price}}{\text{starting price}}$$

If the ending price is less than the threshold price, you will receive less, and possibly 85% less, than the original offering price of your securities at maturity.

How the ending price is calculated

The ending price will be calculated based on the weighted returns of the basket components and will be equal to the product of (i) 100 and (ii) an amount equal to 1 plus the sum of: (A) 50% of the component return of the SPDR S&P 500 ETF Trust; (B) 15% of the component return of the iShares Russell 2000 ETF; (C) 15% of the component return of the iShares MSCI EAFE ETF; (D) 10% of the component return of the iShares MSCI Emerging Markets ETF; (E) 5% of the component return of the PowerShares DB Commodity Index Tracking Fund; and (F) 5% of the component return of the Vanguard REIT ETF.

The component return of a basket component will be equal to:

$$\frac{\text{final component price} - \text{initial component price}}{\text{initial component price}}$$

where,

Edgar Filing: WELLS FARGO & COMPANY/MN - Form FWP

the initial component price is the fund closing price of such basket component on the pricing date, as set forth below; and

the final component price will be the fund closing price of such basket component on the calculation day. The initial component prices of the basket components are as follows: SPDR S&P 500 ETF Trust (\$224.35); iShares Russell 2000 ETF (\$135.37); iShares MSCI EAFE ETF (\$57.37); iShares MSCI Emerging Markets ETF (\$35.26); PowerShares DB Commodity Index Tracking Fund (\$15.81); and Vanguard REIT ETF (\$81.50).
