Indicate the number of outstanding shares of each class of common stock of the close of the period covered by the annual report

(Title of each class)	(Number of outstanding shares)
Ordinary shares, par value €0.56 per share	89,287

Edgar Filing: RBS Holdings N.V. - Form 20-F

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes No

Note – Checking the box above will not relieve any registrant required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 from their obligations under those Sections.

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of “accelerated filer and large accelerated filer” in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-Accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP
 International Financial Reporting Standards as issued by the International Accounting Standards Board
 Other

If “Other” has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow.

Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

Chairman's statement

On 19 April 2011 it was announced that a substantial part of the business activities of RBS N.V. would transfer to RBS plc. The majority of the transfers were concluded in 2011 and 2012. A few businesses remain, including India, Indonesia and China, and their future is being considered in light of the recently announced changes to our wholesale banking proposition. As confirmed on 19 April 2011, the RBS Group is committed to provide the necessary support to ensure that RBS N.V. continues to meet its commitments during and after the transfer of businesses to RBS plc. During 2014, the activities of the RBSH Group in Thailand transferred to RBS plc in addition to other separate assets and liabilities.

A major milestone we reached last year was the completion of the Asset Quality Review as mandated by the European Central Bank (ECB). As the RBS Holdings (RBSH) Group was designated as a significant institution, a detailed review of the RBSH Group's balance sheet took place. We were pleased with the outcome as no major items were raised. Subsequently, on 4 November the ECB formally took over the role of lead supervisor of the RBSH Group from the Dutch Central Bank (DNB). The DNB continues to be part of the Joint Supervisory Team headed by the ECB.

In February 2015, RBS Group announced changes to its Corporate & Institutional Banking (CIB) business to build a stronger, safer and more sustainable business, focused mainly on UK and Western European customers, both corporates and financial institutions, supported by trading and distribution platforms in the UK, US and Singapore. As a consequence, RBS Group will reduce its geographical footprint to approximately 13 countries, compared with 38 at the end of 2014.

As announced, we are exploring the option of a sale for the countries that are to be exited. If this is not feasible, it is expected that the countries will be wound down. The full impact of the announced changes on RBS N.V. is currently being reviewed.

Under the new structure, the RBSH Group and its businesses moved to the new Capital Resolution organisation. For 2015, the focus will remain on the further de-risking of our balance sheet.

Results of operations in 2014

Operating loss before tax was €57 million compared with a loss of €142 million in 2013. This was largely due to lower expenses as a result of lower staff and non-staff costs, due to business transfers to RBS plc, partly offset by lower income due to the transfers of business and the loss on sale of the majority of the liquidity portfolio.

Net interest income decreased due to transfers to RBS plc and the continued low interest rate environment, while non-interest income decreased mainly due to higher losses on the sale of available-for-sale securities.

Total equity as at 31 December 2014, was €3.5 billion, an increase of €0.6 billion compared to 31 December 2013, mainly due to unrealised gains and realised losses on available-for-sale assets.

Capital

RBSH Group continues to be well capitalised. On 31 December 2014, RBSH Group's Total capital ratio was 33.9%, the Tier 1 capital ratio was 24.5% and the Core Tier 1 capital ratio was 16.2%.

Outlook

The outlook for the global economy over the near to medium-term is for modest growth. Risks to growth and stability stem mainly from continued imbalances - among and within countries - and from uncertainty about how economies will respond as the extraordinary monetary policy measures implemented during the crisis are unwound and to other measures that have just been instigated..

Against this background, commercial performance is expected to remain broadly flat.

I would like to conclude by referring to a statement recently made by RBS Group Chief Executive, Ross McEwan:

“Last year we identified the areas we needed to improve in order to deliver our strategy - cost, complexity, capital and trust from our customers. The energy and resolve of our people have resulted in significant progress on each, and we have delivered on the goals we set for 2014.”

On behalf of the RBS N.V. Managing Board, I would like to thank all our employees and clients for their continued commitment during 2014.

Jan de Ruiters
Chairman of the Managing Board RBS Holdings N.V.

Amsterdam, 30 April 2015

Presentation of information

In this document and unless specified otherwise, the terms 'company' and 'RBS Holdings' mean RBS Holdings N.V.. RBS Holdings N.V. is the parent company of The Royal Bank of Scotland N.V. (RBS N.V.) consolidated group of companies and associated companies (RBSH Group). The Royal Bank of Scotland Group plc (RBSG) is the ultimate holding company of RBSH Group. RBS Group refers to RBSG and its consolidated subsidiaries and associated companies. RBS plc refers to The Royal Bank of Scotland plc. The terms 'Consortium' and 'Consortium Members' refer to RBSG, Stichting Administratiekantoor Beheer Financiële Instellingen (the Dutch State, successor to Fortis) and Banco Santander S.A. (Santander) who jointly acquired RBS Holdings on 17 October 2007 through RFS Holdings B.V. (RFS Holdings).

The company publishes its financial statements in 'euro', the European single currency. The abbreviations '€m' and '€bn' represent millions and thousands of millions of euros, respectively. Reference to '\$' is to United States of America (US) dollars. The abbreviations '\$m' and '\$bn' represent millions and thousands of millions of dollars, respectively.

Certain information in this report is presented separately for domestic and foreign activities. Domestic activities consist of transactions within the Netherlands. Geographic analysis has been compiled on the basis of location of office.

The results, assets and liabilities of individual business units are classified as trading or non-trading based on their predominant activity. Although this method may result in some non-trading activity being classified as trading, and vice versa, any resulting misclassification is not material.

All annual averages in this report are based on month-end figures. Management does not believe that these month-end averages present trends materially different from those that would be presented by daily averages.

International Financial Reporting Standards

Unless otherwise indicated, the financial information contained in this Annual Report has been prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the European Union (EU) and IFRS as issued by the International Accounting Standard Board (IASB).

Revised organisational structure

During 2014, the RBS Group introduced a new organisational structure - see page 8 for details. Segmental data for RBSH Group for prior years have been restated accordingly.

Glossary

A glossary of terms is included on pages 195 to 201.

Forward-looking statements

Certain sections in this document contain ‘forward-looking statements’ as that term is defined in the United States Private Securities Litigation Reform Act of 1995, such as statements that include the words ‘expect’, ‘estimate’, ‘project’, ‘anticipate’, ‘believe’, ‘should’, ‘intend’, ‘plan’, ‘could’, ‘probability’, ‘risk’, ‘Value-at-Risk (VaR)’, ‘target’, ‘goal’, ‘objective’, ‘endeavour’, ‘outlook’, ‘optimistic’, ‘prospects’ and similar expressions or variations on such expressions.

In particular, this document includes forward-looking statements relating, but not limited to: the impact of certain aspects of the transformation plan announced by the RBS Group on RBSH Group, the impact of the restructuring of the RBS Group’s CIB business on the remaining transfers of certain of the businesses of RBSH Group to RBS plc (the “Transfers”), the impact on RBSH Group of the implementation of the ring-fence of the retail banking operations of RBS Group, divestments, capitalisation, portfolios, net interest margin, capital and leverage ratios, liquidity, risk-weighted assets (RWAs), RWA equivalents (RWAE), Maximum Distributable Amounts (MDA), minimum requirements for eligible liabilities (MREL), return on equity (ROE), profitability, cost:income ratios, loan:deposit ratios, funding and risk profile; discretionary coupon and dividend payments; litigation, regulatory and governmental investigations; RBSH Group’s future financial performance; the level and extent of future impairments and write-downs; and RBSH Group’s exposure to credit rating risk and to various types of market risks, such as interest rate risk, foreign exchange rate risk and commodity and equity price risk. These statements are based on current plans, estimates and projections, and are subject to inherent risks, uncertainties and other factors which could cause actual results to differ materially from the future results expressed or implied by such forward-looking statements. For example, certain market risk disclosures are dependent on choices about key model characteristics and assumptions and are subject to various limitations. By their nature, certain of the market risk disclosures are only estimates and, as a result, actual future gains and losses could differ materially from those that have been estimated.

Other factors that could adversely affect RBSH Group’s results and the accuracy of forward-looking statements in this document include the risk factors and other uncertainties discussed on pages 181 to 192. These include: RBSH Group’s reliance on the RBS Group, RBSH Group’s ability to achieve its capital targets, RBSH Group’s ability to attract and retain qualified personnel; uncertainties regarding the outcomes of legal, regulatory and governmental actions and investigations that RBS Group and RBSH Group are subject to and any resulting material adverse effect on RBSH Group of unfavourable outcomes; heightened regulatory and governmental scrutiny and the increasingly regulated environment in which RBSH Group operates; operational risks that are inherent in RBSH Group’s business; the potential negative impact on RBSH Group’s business of actual or perceived global economic and financial market conditions and other global risks; uncertainties regarding RBSH Group’s exposure to any weakening of economies within the EU and renewed threat of default by certain countries in the Eurozone; the achievement of capital and costs reduction targets; ineffective management of capital or changes to regulatory requirements relating to capital adequacy and liquidity; the ability to access sufficient sources of capital, liquidity and funding when required; deteriorations in borrower and counterparty credit quality; the extent of future write-downs and impairment charges caused by depressed asset valuations; the impact of unanticipated turbulence in interest rates, yield curves, foreign currency exchange rates, credit spreads, bond prices, commodity prices, equity prices; basis, volatility and correlation risks; changes in the credit ratings of RBSG, the Bank or other entities of the RBS Group; changes to the valuation of financial instruments recorded at fair value; competition and consolidation in the banking sector; regulatory or legal changes; changes to the monetary and interest rate policies of central banks and other governmental and regulatory bodies; changes in laws, regulations, accounting standards and taxes; the high dependence of RBSH Group’s operations on its information technology systems and its increasing exposure to cyber security threats; the reputational risks inherent in RBSH Group’s operations; the risk that RBSH Group may suffer losses due to employee misconduct; the recoverability of deferred tax assets by RBSH Group; liabilities resulting from the legal demerger of ABN Amro Bank N.V.; and the success of RBSH Group in managing the risks involved in the foregoing.

The forward-looking statements contained in this document speak only as of the date of this announcement, and the RBSH Group does not undertake to update any forward-looking statement to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events.

The information, statements and opinions contained in this document do not constitute a public offer under any applicable legislation or an offer to sell or solicitation of any offer to buy any securities or financial instruments or any advice or recommendation with respect to such securities or other financial instruments.

Financial review

Description of business

Introduction

RBS Holdings offers a range of banking products and financial services, principally in Europe and Asia.

In 2007, RFS Holdings, which was jointly owned by RBSG, Fortis (succeeded by the Dutch State in 2008) and Santander (together, the 'Consortium Members') completed the acquisition of RBS Holdings.

RBS Holdings has one direct subsidiary, RBS N.V., a fully operational bank within RBSH Group. RBS N.V. is independently rated and regulated, effective from 4 November 2014 the Dutch Central Bank was replaced as the main regulator by the European Central Bank (ECB) in conjunction with the Dutch Central Bank. Certain assets within RBS N.V. continue to be owned by the Dutch State or shared by the Consortium Members.

Since 31 December 2010, RBSG's shareholding in RFS Holdings has been 97.72%. RFS Holdings is controlled by RBSG, which is incorporated in the UK and registered at 36 St Andrew Square, Edinburgh, Scotland. RBSG is the ultimate parent company of RBSH Group. The consolidated financial statements of RBSH Group are included in the consolidated financial statements of RBS Group.

RBSH Group had total assets of €23.6 billion and Total equity of €3.5 billion at 31 December 2014. RBSH Group's capital ratios were a Total capital ratio of 33.9%, a Tier 1 capital ratio of 24.5% and a Common Equity Tier 1 capital ratio of 16.2% as at 31 December 2014.

Organisational structure and business review

On 27 February 2014, RBS Group announced the reorganisation of the previously reported operating divisions into three franchises: Personal & Business Banking, Commercial & Private Banking and Corporate & Institutional Banking (CIB). Only CIB, comprising the former Markets and International Banking divisions, is relevant for RBSH Group. CIB is a single reportable segment.

Corporate & Institutional Banking is the wholesale banking business comprising, Markets and Transaction Services which work closely together to serve customers. The businesses operate internationally providing lending, fixed income, foreign exchange, rates, credit, securitisation and transaction banking services primarily to large UK and international corporates and financial institutions.

Services supports the customer-facing businesses and provides operational technology, customer support in telephony, account management, lending and money transmission, global purchasing, property and other services. Services drives efficiencies and supports income growth by using a single, scalable platform and common processes wherever possible. It is the centre of excellence for managing large-scale and complex change. Services costs are allocated to the operating segments and is not deemed a reportable segment.

Central Functions comprises corporate functions, such as treasury, finance, risk management, legal, communications and human resources. Central functions manages RBSH Group's capital resources and provides services to the operating segments.

RBS Capital Resolution (RCR) became fully operational on 1 January 2014 with pool of c.£29 billion of RBS Group assets (of which approximately £1.5 billion related to RBSH Group) with particularly high long-term capital intensity, credit risk and/or potentially volatile outcomes in stressed environments. RCR brings assets under common management and increases focus on managing these assets so as to release capital.

Strategic review of CIB

On 26 February 2015, RBS Group announced that it is making further changes to improve its medium-term returns, building a stronger, safer and more sustainable business, focused mainly on UK and Western European customers, both corporates and financial institutions, supported by trading and distribution platforms in the UK, US and Singapore. These changes will create a more focused corporate and institutional bank built on existing product and service strengths. RBS Group will have a strong, client-focused product offering in sterling, US dollar and euro, including:

- Debt financing, with debt capital markets, structured finance and loans.
- Risk management in currency, rates and inflation.
- Transaction services, with UK-focused cash, payments and trade.

CIB will reduce its geographical footprint to approximately 13 countries, compared with 38 at the end of 2014, though RBS Group will also retain its back office operations in Poland and India. In addition to its main distribution and trading hubs in the UK, US and Singapore, RBS Group will remain present in a number of Western European countries with coverage teams. A small sales team will be retained in Japan. US operations will shrink, while retaining the presence required to support the US dollar needs of RBS Group's UK and Western European customers. Priority client sectors will be targeted in infrastructure, transportation, financial institutions, energy and resources.

CIB will continue to reduce its balance sheet and risk profile. RWAs will be reduced by 60% by 2019, with a reduction of more than £25 billion targeted in 2015. Third party assets will be reduced by more than 60% by 2019.

Financial review

This CIB strategy leaves RBS Group well-placed to meet the ring-fencing requirements of the Banking Reform Act 2013. As previously indicated, RBS Group intends to place most banking services inside the ring fence. CIB's remaining "Markets" activities, the operations of RBS International and some corporate banking activity are expected to remain outside the ring-fenced bank in separate legal entities.

Transfers of a substantial part of the business activities of RBS N.V. to RBS plc

Following the announcements in April 2011 by the Boards of RBSG, RBS plc, RBS Holdings and RBS N.V., a substantial part of the business activities of RBS N.V. had been successfully transferred to RBS plc by the end of 2012.

In 2013, assets and liabilities relating to businesses in Russia, Romania, Korea and North America were transferred to RBS plc by a combination of local schemes of arrangement, cross-border merger, novations and subsidiary share sales.

During 2014, the Thailand business was transferred to RBS plc.

RBS N.V. US branches

The RBS N.V. US branches will be closed once the remaining tail assets have been transferred and applicable regulatory approval has been received.

Competition

RBSH Group faces strong competition in all the markets it serves. Banks' balance sheets have strengthened whilst loan demand has been subdued as corporate investment levels remain low and economic growth is fragile.

Competition for corporate and institutional customers in the Netherlands and abroad is from Dutch banks and from foreign banks that offer investment and corporate banking services. In addition, RBSH Group's Corporate and Institutional Banking (CIB) business faces competition from dedicated investment banks and from non-bank institutions via disintermediation in credit and financing products. In European, American and Asian corporate and institutional banking markets RBSH Group also competes with the large domestic banks active in these markets and with the major international banks.

Financial review

Risk factors

Set out below is a summary of certain risks which could affect RBSH Group. RBSH Group is a subsidiary of RBSG and accordingly, risk factors which relate to RBSG and the RBS Group will also be of relevance. This summary should not be regarded as a complete and comprehensive statement of all potential risks and uncertainties. A fuller description of these and other risk factors is included on pages 181 to 192.

- RBSH Group is reliant on the RBS Group as it receives capital, liquidity and funding support from the RBS Group and its banking operations function on the RBS Group's integrated global infrastructure, and such reliance will increase as RBSH Group continues to divest a number of its businesses and portfolios.
- The RBS Group's restructuring of its CIB business will impact RBSH Group as well as the planned transfers or sale of a substantial part of the business activities of RBS N.V. and the execution and/or delay in the execution or non-completion of the approved transfers or sale of such business activities may have a material adverse effect on RBSH Group. There is no assurance that RBSH Group will be able to sell and/or run-down the remaining businesses they are seeking to exit or sell asset portfolios either on favourable economic terms to RBSH Group or at all, and RBSH Group will remain exposed to prevailing market conditions as well as risks relating to liabilities, obligations and/or indemnities arising in connection with such sales or transfers.
- Operational risks are inherent in RBSH Group's businesses and these risks will increase as a result of the restructuring of the RBS Group's CIB business. RBSH Group's operations are also highly dependent on its information technology systems and RBSH Group is exposed to the risk of cyber-attacks and other cyber security threats.
- The RBS Group has started implementing the ring-fence of its retail banking operations in the UK which must be in place by 2019, and which may impact RBSH Group if the remaining disposals of its business are not completed by that date.
- RBS Group and RBSH Group are subject to a number of legal, regulatory and governmental actions and investigations. Unfavourable outcomes in such actions and investigations could have a material adverse effect on RBSH Group's operating results, investor confidence or reputation. It is expected that the RBS Group and RBSH Group will continue to have a material exposure to litigation and governmental and regulatory proceedings and investigations in the medium term.
- RBSH Group may be unable to attract or retain senior management (including members of the supervisory board) and other skilled personnel of the appropriate qualification and competence, due to RBS Group's changing strategy, including the restructuring of the RBS Group's CIB business as well as the imposition of restrictions on compensation or other regulatory initiatives. RBSH Group may suffer if it does not maintain good employee relations or as a result of employee misconduct.
- RBSH Group operates in markets that are highly competitive and subject to rapid change. Recent regulatory and legal changes are likely to result in new market participants and changed competitive dynamics in certain key areas and other competitors may have more efficient operations as well as access to lower cost/funding and better client and employee retention rates.
- RBSH Group's businesses and performance can be negatively affected by actual or perceived global economic and financial market conditions and other global risks. RBSH Group is also exposed to any weakening of the European

economy and the renewed threat of default by certain countries in the Eurozone.

- RBSH Group's business performance could be adversely affected if its or the RBS Group's capital are not managed effectively or as a result of changes to capital adequacy and liquidity requirements. In addition, RBSH Group's ability to meet its obligations including its funding commitments depends on RBSH Group's ability to access sources of liquidity and funding which may be affected by credit markets and the monetary policies of central banks.
- RBSH Group's borrowing costs, its access to the debt capital markets and its liquidity depend significantly on its and the RBS Group's credit ratings. Any further reductions in the long-term or short-term credit ratings of RBS Holdings, RBS N.V., RBSG, RBS plc or one of their subsidiaries would increase borrowing costs and may limit RBSH Group's access to capital and money markets and trigger additional collateral or other requirements as well as limit the range of counterparties willing to enter into transactions with RBS Holdings and may adversely affect RBSH Group's competitive position.
- RBSH Group's businesses are subject to substantial regulation and oversight. Significant regulatory developments and increased scrutiny by RBSH Group's key regulators has increased compliance risks and has had and is likely to continue to have a material adverse effect on how RBSH Group conducts its business and on its results of operations and financial condition. The RBS Group is also subject to resolution procedures under resolution and recovery schemes which may result in various actions being taken in relation to the RBS Group and any securities of the RBS Group and which may adversely affect RBSH Group.
- The financial performance of RBSH Group has been, and may continue to be, materially affected by deteriorations in borrower and counterparty credit quality and further deteriorations could arise due to prevailing economic and market conditions and legal and regulatory developments. Depressed asset valuations resulting from poor market conditions may also result in further impairment charges and write-downs of RBSH Group's assets. In addition, changes in interest rates, foreign exchange rates, credit spreads, bond, equity and commodity prices, basis, volatility and correlation risks and other market factors have significantly affected and will continue to affect RBSH Group's business and results of operations.

Financial review

- The value of certain financial instruments recorded at fair value is determined using financial models incorporating assumptions, judgements and estimates that may change over time or may ultimately not turn out to be accurate. RBSH Group's valuation, capital and stress test models and the parameters and assumptions on which they are based rely on market data inputs and need to be constantly updated to ensure their accuracy. Failure of these models to accurately reflect changes in the environment in which RBSH Group operates or the failure to properly input any such changes could have an adverse impact on the modelled results.
- The legal demerger of ABN AMRO Bank N.V. (as it was then named) has resulted in a cross liability that changes the legal recourse available to investors.

Loss for the year	(100)	(135)	(999)

2014 compared with 2013

Operating loss before tax was €57 million compared with a loss of €142 million in 2013. This decrease was due to lower operating expenses partially offset by lower income, reflecting the transfers of businesses to RBS plc.

Total income decreased by €164 million to €273 million. This is mainly due to lower non-interest income.

Net interest income decreased by €51 million to €187 million, mainly reflecting business transfers and the continued low interest rate environment.

Non-interest income decreased by €113 million to €86 million compared with €199 million in 2013. This included higher losses on the sale of available-for-sale securities in Treasury partially offset by higher profits from interests in associates and an increase in the value of own credit adjustments.

Operating expenses decreased by €218 million to €319 million mainly due to reductions in both staff and non-staff costs as a result of business transfers to RBS plc.

Impairment losses decreased by €31 million to €11 million driven by a smaller number of individual cases.

Tax charge for 2014 was €58 million compared with €12 million in 2013.

2013 compared with 2012

Operating loss before tax was €142 million compared with a loss of €887 million in 2012. This decrease was due to lower operating expenses partially offset by lower income.

Total income decreased by €271 million to €437 million. This is mainly due to lower net interest income.

Net interest income decreased by €367 million to €238 million, reflecting further reductions in interest income, in particular in CIB, due to further business transfers to RBS plc and the continued low interest rate environment.

Non-interest income increased by €96 million to €199 million compared with €103 million in 2012. This increase is mainly due to the €776 million lower loss on own credit adjustment resulting from the widening of credit spreads of UK banks. This was partially offset by lower net fees and commissions as a result of business transfers to RBS plc, and lower profit on sales of subsidiaries and associates and securities.

Operating expenses decreased by €993 million to €537 million due to reduced staff and non-staff costs as a result of staff transferring as part of business transfers to RBS plc and business divestments.

Impairment losses decreased by €23 million to €42 million. The 2013 charge is driven by a small number of individual cases. The reduction reflects business transfers to RBS plc.

Tax charge for 2013 was €12 million compared with €129 million in 2012. The higher rate for 2012 was mainly the result of the reduction in carrying value of the deferred tax asset in respect of losses in Australia

Analysis of change in net interest income – volume and rate analysis

Volume and rate variances have been calculated based on movements in average balances over the period and changes in interest rates on average interest-earning assets and average interest-bearing liabilities. Changes due to a combination of volume and rate are allocated pro rata to volume and rate movements.

Financial review

Segment performance

In February 2014, RBS Group announced the reorganisation of the previously reported operating divisions into three franchises: Personal & Business Banking, Commercial & Private Banking and Corporate & Institutional Banking (CIB). Only CIB, comprising the former Markets and International Banking divisions, is relevant for RBSH Group. CIB is a single reportable segment.

RBS Capital Resolution (RCR) was established with effect from 1 January 2014 by the transfer of capital intensive and higher risk assets from previous divisions. Non-Core was dissolved on 31 December 2013. No business lines moved to RCR and so comparative data has not been restated. RCR will be reported separately until wind-down.

The results of each segment are set out below. Services directly attributable costs have been allocated to the operating segments, based on their service usage. Where services span more than one segment an appropriate measure is used to allocate the costs on a basis which management considers reasonable. Services costs are fully allocated and there are no residual unallocated costs.

2014 compared with 2013

Operating profit before tax was €2 million compared with a profit of €5 million in 2013.

Total income decreased by €154 million to €284 million mainly attributable to a decrease in non-interest income.

Net interest income increased by €22 million to €134 million compared with €112 million in 2013.

Non-interest income decreased by €176 million to €150 million in 2014 compared with €326 million in 2013, reflecting reduced deployment of resources.

Operating expenses decreased by €100 million to €281 million compared with €381 million in 2013. This reflected the continued focus on cost savings across both business and support areas and the transfer of businesses to RBS plc.

Impairment losses were €1 million compared with €52 million in 2013, reflecting a low level of new impairments. The impairments in 2013 reflected a small number of single name provisions.

2013 compared with 2012

Operating profit before tax was €5 million compared with a loss of €321 million in 2012. This improvement of €326 million was mainly due to lower operating expenses.

Total income decreased by €498 million to €438 million mainly attributable to a decrease in net-interest income.

Net interest income decreased by €310 million to €112 million compared with €422 million in 2012. This reflects the transfer of businesses to RBS plc.

Non-interest income decreased by €188 million to €326 million in 2013 compared with €514 million in 2012, primarily due to lower fee and trading income as a result of the transfer of businesses to RBS plc. This was offset by lower losses in other operating income.

Operating expenses decreased by €865 million to €381 million compared with €1,246 million in 2012. This reflects the continuing transfer of businesses to RBS plc.

Impairment losses increased by €41 million to €52 million compared with €11 million in 2012. The impairments in 2013 and 2012 reflect a small number of single name provisions.

	€m	€m	€m
Central items not allocated	(106)	(359)	(535)

2014 compared with 2013

Central items not allocated were €106 million compared with €359 million in 2013. Items not allocated in the year mainly relates to the loss on the sale of available-for-sale securities partially offset by an increase in profits from interests in associates.

2013 compared with 2012

Central items not allocated reduced €176 million to €359 million mainly reflecting lower own credit adjustment attributable to the tightening of credit spreads.

2014

Operating profit before tax of €47 million reflects the benefit received from life settlement and project finance income.

Operating expenses of €27 million is largely as a result of costs associated with RCR disposal activity.

The favourable market and economic conditions resulted in an €8 million impairment release.

Non-Core was dissolved on 31 December 2013.

2013 compared with 2012

Operating profit before tax was €212 million compared with a loss of €31 million in 2012, largely due to higher total income, lower expenses and impairment releases.

Total income increased by €42 million to €244 million compared €202 million in 2012 mainly due to higher non-interest income.

Net interest income decreased by €79 million to €138 million compared with €217 million in 2012 following continuing Non-Core disposals.

Non-interest income increased by €121 million to €106 million compared with a loss of €15 million in 2012.

Operating expenses decreased by €114 million to €88 million compared with €202 million in 2012, reflecting continuing disposals.

Impairment releases were €56 million compared with losses of €31 million in 2012.

Financial review

Commentary on consolidated balance sheet

2014 compared with 2013

Total assets were €23.6 billion at 31 December 2014, a decrease of €16.2 billion, or 41%, compared with €39.8 billion at 31 December 2013.

Cash and balances at central banks decreased by €2.1 billion or 64% to €1.1 billion at 31 December 2014 reflecting reduced liquidity requirements.

Loans and advances to banks increased by €2.0 billion, or 35%, to €7.7 billion at 31 December 2014, principally due to an increase in balances with fellow subsidiaries.

Loans and advances to customers declined €0.2 billion, or 6%, to €3.5 billion, reflecting repayments and business run-down.

Debt securities and equity shares decreased by €12.3 billion, or 79%, to €3.2 billion at 31 December 2014, mainly reflecting the sale of €9.0 billion of securities held as part of the liquidity portfolio.

Derivative assets decreased by €0.4 billion, or 7%, to €4.4 billion, and derivative liabilities decreased by €1.3 billion, or 22%, to €4.6 billion mainly reflecting reduced deployment of resources.

The decrease in assets and liabilities of disposal groups is due to the completion of transfers to RBS plc in 2014. These businesses were included in held for disposal as at 31 December 2013.

Deposits by banks decreased by €13.8 billion, 73%, to €5.2 billion, with lower repurchase agreements and stock lending (repos), down €11.1 billion to €0.6 billion. This reduction is mainly due to planned reductions in funding from RBS plc in addition to the transfer of businesses to RBS plc during the year.

Customer accounts were down €1.2 billion, 29%, to €2.9 billion, mainly reflecting balance sheet reduction in CIB and RCR.

Debt securities in issue declined €0.3 billion, 23%, to €1.0 billion largely reflecting decreases in medium-term-notes in CIB.

Owners' equity increased by €0.5 billion, 18%, to €3.5 billion, largely due to favourable mark-to-market movements on available-for-sale debt securities offset by an ordinary dividend of €300 million.

2013 compared with 2012

Total assets were €39.8 billion at 31 December 2013, a decrease of €31.2 billion, or 44%, when compared with €71.0 billion at 31 December 2012.

Cash and balances at central banks increased by €0.9 billion or 39% to €3.2 billion at 31 December 2013.

Loans and advances to banks decreased by €6.5 billion, or 53%, to €5.7 billion at 31 December 2013 principally due the transfer of businesses to RBS plc during the year.

Loans and advances to customers declined €2.6 billion, or 41%, to €3.8 billion. This reflected the transfer of businesses to RBS plc during the year, in particular within CIB.

Debt securities decreased by €7.4 billion, or 33%, to €15.3 billion, reflecting bond maturities, the transfer of businesses to RBS plc and the sale of part of the liquidity portfolio.

Equity shares decreased by €0.8 billion, or 74%, to €0.3 billion. This reflected the transfer of businesses to RBS plc.

Derivative assets decreased by €2.8 billion, or 37%, to €4.8 billion, and Derivative liabilities decreased by €3.8 billion, or 39%, to €5.9 billion, this was largely attributable to the transfer of businesses to RBS plc.

The decrease in assets and liabilities of disposal groups is due to the completion of transfers to RBS plc in 2013. These businesses were held for disposal as at 31 December 2012.

Deposits by banks decreased by €15.5 billion, 45%, to €18.9 billion, with lower repurchase agreements and stock lending (repos), down €0.9 billion, 7%, to €11.7 billion. This reduction is mainly due to the transfer of businesses to RBS plc during the year. In addition the decrease is due to planned reductions in funding from RBS plc.

Customer accounts were up €1.5 billion, 57%, to €4.2 billion.

Debt securities in issue declined €1.3 billion, 49%, to €1.3 billion largely decreases in notes and commercial paper reflecting reduced positions in CIB and Treasury.

Owners' equity increased by €1.1 billion, 64%, to €2.9 billion, largely due to favourable mark-to-market movements on available-for-sale debt securities, offset by the attributable loss in the year.

Presentation of information

Except as otherwise indicated by an asterisk (*), information in the Capital and risk management section (pages 25 to 78) is within the scope of the Report of independent registered public accounting firm.

Capital and risk management are conducted on an overall basis within RBS Group. Therefore the discussion on Capital and risk management on pages 25 to 78 refer principally to policies and procedures in RBS Group that also apply to RBSH Group.

Risk governance*

Governance structure

Capital and risk management strategies are owned and set by the Managing Board of RBSH Group and are implemented by the executive management. There are a number of committees and executives that support the execution of the business plan and strategy. Two of these committees are dedicated to RBSH Group and report to the RBSH Group Managing Board. These are depicted and described in the structure chart and table below. Matters not specifically delegated are reserved for the Managing Board.

There are also risk functions and committees that cover RBS Group and (parts of) RBSH Group reflecting the integrated manner in which the business is managed within RBS Group. Service Level Agreements are in place between RBSH Group and RBS Group to accommodate this integrated risk management oversight, including escalation procedures to the RBSH Group Managing Board as appropriate.

During 2014 the RBSH Group Chief Risk Officer had a reporting line into the CRO of Divested Businesses.

Risk management within RBSH Group focuses on all material risks including credit, market, operational, regulatory and country risk and business activities. Liquidity risk and the day-to-day management of liquidity and funding of the book are the responsibility of RBSH Group Treasury.

For a summary of the main risk types faced by RBSH Group and how it manages each of them, refer to pages 33 and 34.

Risk governance*

RBS Group governance structure

RBS Group is committed to achieving the highest standards of corporate governance in every aspect of its business, including risk management. A key aspect of the Board's responsibility as the main decision-making body is the setting of risk appetite (refer to page 31 for more information on risk appetite) to ensure that the levels of risk RBS Group is willing to accept in the attainment of its strategic business and financial objectives are clearly understood. The Board delegates authority for risk management to specific committees.

The risk governance structure and the main purposes of each of the committees is illustrated below:

Financial review Capital and risk management

The following table shows details of the key RBSH Group Board and Committees and their responsibilities.

Board/Committee	Responsibilities
<p>Supervisory Board</p> <p>Membership: Consists of three members. Three are executives of RBS Group.</p>	<p>The Supervisory Board is responsible for supervising RBSH Group's management and RBSH Group's general affairs and the business connected with it as well as for advising the Managing Board.</p>
<p>Managing Board</p> <p>Membership: Four members led by the RBSH Group Chairman, RBSH Group Chief Administrative Officer (CAO), RBSH Group Chief Financial Officer (CFO), RBSH Group Chief Risk Officer (CRO)</p>	<p>Reports to the Supervisory Board. It is the principal decision-making forum for the RBSH Group, setting policy framework, operating structure and yearly plan (including objectives and budgets). All members of the Managing Board have responsibility for RBSH Group. As well as their overall corporate responsibilities, the members of the Managing Board manage one or more units, for which they have primary responsibility.</p>
<p>RBSH Group Risk and Control Committee (RCC)</p> <p>Membership: Chaired by the RBSH Group CRO. Members include Chairman Managing Board, RBSH Group CFO, Senior N.V. Risk Manager, N.V. delegate of RBS Group Credit, Market, and Operational Risk, RBS N.V. Head of Conduct & Regulatory Affairs, Chief Risk Officer Asia.</p>	<p>The responsibilities of the RCC include:</p> <ul style="list-style-type: none"> · Advising the Managing Board on the risk appetite of the RBSH Group and receiving direction from the Managing Board on the risk appetite; · Providing input to the RBSH Group risk-appetite-setting process in the context of the Group's overall risk appetite; · Overseeing the risk framework within RBSH Group and report directly to the RBSH Group Managing Board on the performance of the framework and on issues arising from it; · Monitoring the actual risk profile of RBSH Group, ensuring that this remains within the boundaries of the agreed risk appetite or else escalating excesses to the RBSH Group Managing Board. Prior to escalation, the RCC can ask the appropriate risk committee in RBS Group or in the business that normally monitors and controls the risk item to address any excess. · The remit of the Committee also includes Credit, Market, Operational and Regulatory Risk within RBS N.V.. Changes to the Terms of Reference of the RBSH Group RCC must be approved by the RBSH Group Managing Board. To execute its authority the RCC has access to all relevant risk information relating to RBSH Group available within RBS Group including escalations from and to Group or segmental Committees.

RBSH Group Asset and Liability Committee (ALCo)	The mandate of ALCo covers the following specific areas in respect of RBSH Group:
Membership:	
Seven permanent voting members led by the RBSH Group Chairman for the Managing Board, RBSH Group CFO, RBSH Group CAO, RBSH Group CRO, RBS N.V. Treasurer, RBS Group Treasurer and Global Head of Equity and Liquidity.	<ul style="list-style-type: none">· The overall governance responsibility for the strategic management of the RBSH Group Balance Sheet;· The review, approval and allocation of balance sheet, capital, liquidity and funding limits;· The liquidity, funding, foreign exchange and interest rate exposures of RBSH Group's balance sheet;· The balance sheet structure and risk-weighted assets position of RBSH Group;· Decisions on capital repatriation and loss coverage;· Compliance with all regulatory requirements at all times;· The implementation and maintenance of transfer pricing policies (although setting the liquidity spread curve remains the responsibility of the RBS Group ALCo);· The approval and implementation within RBSH Group of RBS Group Treasury policies and procedures; and· RBSH Group ALCo is responsible for oversight of retained business (shared assets) and residual ABN AMRO business.

Financial review Capital and risk management

Three lines of defence

The three lines of defence model is used industry-wide for the management of risk. It provides a clear set of principles by which to implement a cohesive operating model, one that defines accountabilities and responsibilities for managing risk across the organisation.

First line of defence - Management and supervision

The first line of defence includes customer franchises, Technology and Operations and support functions such as HR and Communications. Responsibilities include:

- Owning, managing and supervising, within a defined risk appetite, the risks which exist in the business area.
- Ensuring appropriate controls are in place to mitigate risk: balancing control, cost, customer service and competitive advantage.
- Ensuring that the culture of the business supports balanced risk decisions and compliance with policy, laws and regulations.
- Ensuring that the business has effective mechanisms for identifying, reporting and managing risk and controls.

Second line of defence - Oversight and control

The second line of defence includes RBS Group Risk Management and RBS Group Conduct and Regulatory Affairs.

Responsibilities include:

- Owning and developing the risk and control policies, limits and tools for the business to use to discharge its responsibilities.
- Overseeing and challenging the management of risks and controls.
- Leading the design, development and communication of the bank's risk culture and appetite.
- Analysing the aggregate risk profile and ensuring that risks are being managed to the desired level (risk appetite).
- Providing expert support and advice to the business on risk management.
- Providing senior executives with relevant management information and reports and escalating concerns where appropriate.
- Undertaking assurance.

Third line of defence - Internal Audit

Responsibilities include:

- Providing assurance on the key risks to the organisation by assessing the entire control framework.
- Holding RBS Group Risk Management accountable for establishing an appropriate risk management framework.

Financial review Capital and risk management

Management structure

RBS Group's management structure and the main elements of each role are illustrated below.

Notes:

(1) RBS Group Risk Management

The RBS Group Chief Risk Officer (CRO) leads RBS Group Risk Management. The CRO reports directly to the RBS Group Chief Executive and the Board Risk Committee, with a right of access to the Chairman of the Board Risk Committee.

RBS Group Risk Management is an independent function, structured by risk discipline to facilitate the effective management of risk.

In 2014, Risk Management, which had previously been spread across the different business segments, re-organised itself into five functional areas: Operational Risk, Support Functions & Divested Businesses; Credit Risk; Market Risk; Enterprise-Wide Risk Management and Risk Infrastructure. Directors of Risk were also appointed for each of the franchises and for Services. The streamlined structure consolidates risk information, allowing for more efficient decision-making.

The directors of risk functions are responsible for RBS Group-wide risk appetite and standards within their respective disciplines and report directly to the CRO.

CROs are in place for certain jurisdictions and legal entities to meet local regulatory and governance requirements. They lead the risk management teams locally in support of functional risk heads where teams follow a functional operating model. The key CRO roles report directly to the RBS Group CRO.

Risk committees in the customer businesses oversee risk exposures arising from their business activities and focus on ensuring that they are adequately monitored and controlled.

(2) Conduct and Regulatory Affairs

Conduct & Regulatory Affairs (C&RA) is led by the Chief Conduct & Regulatory Affairs Officer, who reports directly to the Chief Executive. It is responsible for providing oversight of conduct risk and regulatory risk at RBS Group, and does so by setting bank-wide policy and standards, providing advice to each customer business, and ensuring that the mitigating controls are suitable. C&RA also provides leadership of the bank's relationships with its regulators.

The functional heads (the directors of Remediation, Compliance Services, RBS Americas, Financial Crime, Regulatory Affairs and Advisory) report directly to the Chief Conduct & Regulatory Affairs Officer. Each is responsible, where appropriate, for the bank-wide risk appetite and standards of their respective areas:

A Chief Compliance Officer in each franchise, reporting to the Director of C&RA Advisory, provides advisory support to assist businesses in their management of conduct, regulatory affairs and financial crime.

Financial review Capital and risk management

Risk appetite and culture*

Risk appetite

RBSH Group's risk appetite establishes the level and type of risk that it is willing to accept in order to meet its strategic objectives and its wider obligations to stakeholders.

RBSH Group has developed a framework that sets and implements an appropriate risk appetite supported by a regular monitoring and review process. A risk appetite statement setting out overall risk limits for different risk types is approved by the Supervisory Board. Risk appetite limits and risk exposures are reported monthly to the Risk & Control Committee, the Managing Board and the Supervisory Board. Any limit breach is reported to the Managing Board. The Managing Board may grant a temporary waiver or require the position to be adjusted to comply with the risk limit.

Strategic risk objectives

Risk management plays an integral role in the delivery of strategic goals. The implementation of a stronger and more effective culture of risk management and control provides the platform necessary to address vulnerabilities, rebuild on core strengths and position RBS Group on a sustainable and profitable path for future growth.

Financial strength and resilience are at the heart of the strategic plan. RBS Group has defined this level of robustness as that which is capable of achieving and sustaining a standalone credit rating (i.e. without government support) that is in line with those of its strongest international peers.

Given this central aim, the RBS Group Board has set out four key strategic objectives, aligned with the strategic plan:

- Maintain capital adequacy.
- Deliver stable earnings growth.
- Ensure stable and efficient access to funding and liquidity.
- Maintain stakeholder confidence.

Each objective is essential in its own right, but also mutually supportive of the others. The strategic risk objectives are the bridge between the RBS Group-wide business strategy and the frameworks, limits and tolerances that are used to set risk appetite and manage risk in the business franchises on a day-to-day basis.

This is how the strategic plan is brought to life in our management of risk:

Risk appetite measures

A range of different but complementary tools has been developed to measure whether strategic plans are consistent with risk appetite, to test broader 'what if' questions and to assess the impact of changes in key assumptions:

- Stress testing - assesses how earnings, capital and funding positions change under an unfavourable, yet plausible, scenario. Stress scenarios can differ by theme, geographical location or severity.
- Economic capital - provides complementary insights, with a breadth of understanding of risk profile changes and 'tail risks' across millions of different modelled scenarios.
- Sensitivity analysis - provides 'ready reckoners' around changes in key variables. It offers a high-level view on questions such as 'what if gross domestic product worsened by a further 1%', identifying certain tipping points where the bank's risk profile moves outside appetite.

Risk control frameworks and limits

Risk control frameworks and their associated limits are an integral part of the risk appetite framework and a key part of embedding risk appetite targets in day-to-day risk management decisions. The risk control frameworks manage risk by expressing a clear tolerance for material risk types that is aligned to business activities.

The Group Policy Framework directly supports the qualitative aspects of risk appetite, helping to rebuild and maintain stakeholder confidence in RBS Group's risk control and governance. Its integrated approach is designed to ensure that an appropriate standard of control is set for each of the material risks it faces, with an effective assurance process put in place to monitor and report on performance. Risk appetite has its own policy standard within the Group Policy Framework. This standard sets out clear roles and responsibilities to set, measure, cascade and report performance against risk appetite, and provides assurances that business is being conducted within approved risk limits and tolerances.

Financial review Capital and risk management

Culture, values and remuneration

Objectives for risk culture

The establishment of a strong risk culture is essential to the realisation of RBS Group's ambition to build "a truly customer-centric bank". A strong risk culture is a key part of ensuring risk appetite is effectively embedded across RBS Group. The link between risk appetite and strategic objectives encourages people at all levels of the business to think about risk, how they identify it and how they manage it. It incorporates the quantitative and qualitative aspects of risk and uses both absolute and relative risk measures.

Risk culture policies

A core principle behind the development of the risk appetite framework is that risk appetite contributes to a strong risk management culture, in which risk is clearly and meaningfully aligned with business behaviours and outcomes. RBS Group's values - of "serving customers", "working together", "doing the right thing" and "thinking long term" - act as a clear starting point for a strong and effective risk culture. A wide range of communication and engagement activities (detailed below) has been undertaken to discuss the meaning of each value with employees and how they affect and guide day-to-day activities.

The embedding of RBS Group's values into a strong risk culture is supported by a revised and more focused Code of Conduct. The Code provides guidance on expected behaviour and sets out the standards of conduct that support the values. It explains the effect of decisions that are taken and describes the principles that must be followed.

These business principles cover conduct-related issues as well as wider business activities. They focus on desired outcomes, with practical guidelines to align the values with commercial strategy and actions. The embedding of business principles facilitates sound decision making and a clear focus on good customer outcomes in 'the moments that matter'. It is aligned with the people management and remuneration processes to support a positive and strong risk culture through appropriate incentive structures.

A simple decision-making guide (called the "YES check") has been included in the Code of Conduct. It is a simple, intuitive set of five questions, designed to ensure the values guide day-to-day decisions:

- Does what I am doing keep our customers and RBS Group safe and secure?
- Would customers and colleagues say I am acting with integrity?
- Am I happy with how this would be perceived on the outside?
- Is what I am doing meeting the standards of conduct required?
- In five years' time would others see this as a good way to work?

Each question is a prompt to think about the situation and how it fits with RBS Group's values. It ensures that employees can think through decisions that do not have a clear answer, guiding the judgements behind their decisions and actions.

Training

Across the risk management function, a series of events and activities have been undertaken to bring alive the bank's values and culture for employees. This is supported by performance management processes that hold individuals to account for poor behaviour and reward the behaviour that supports the bank's purpose, vision and values.

RBS Group Risk Management runs a Risk Academy which helps to train staff and to spread a common risk culture across the bank. Training plans are aligned with Risk function strategy to ensure staff have the skills and capabilities to support business and to meet changing regulatory and policy requirements.

Risk-based key performance indicators

RBS Group-wide remuneration policy requires remuneration to be aligned with, and to support, effective risk management. The policy ensures that the remuneration arrangements for all employees reflect the principles and standards prescribed by the UK Remuneration Code. For further information refer to page 152.

Financial review Capital and risk management

Risk coverage

The main risk types faced by RBSH Group are presented below.

Risk type	How the risk arises	2014 overview
Conduct and legal risk	<p>Conduct risk can result in fines and reputational damage if customers are not treated in line with their and other stakeholders' expectations.</p> <p>Conduct risk exists across all stages of the RBSH Group's relationships with its customers, from sales through service delivery to post-sales processes. It also exists in the activities RBS Group undertakes to manage its business, from the development of business strategies, through governance and human resource management. Conduct risk also exists if the RBSH Group does not take effective action to prevent fraud, bribery and money laundering.</p>	<p>RBS Group continued to remediate historical conduct issues, while also restructuring its customer-facing businesses and support functions around the needs of its customers. In RBSH Group (legacy) rate setting has also been the primary focus from a conduct perspective. Although the impact of conduct risk is considered less of a concern for RBSH Group at the end of 2014, it remains of high priority due to its importance to RBS values.</p>
Regulatory risk	<p>Regulatory risk arises from the RBSH Group's regulatory, business or operating environments and from how it responds to them.</p>	<p>The level of regulatory risk remained high for RBS Group as policymakers and regulators continued to strengthen regulations and supervision in response to the events of 2007 and 2008. For RBSH, regulatory risk is continuously decreasing as a result of significant reduction of the balance sheet of RBSH and the on-going sale of front line businesses.</p>
Operational risk	<p>Operational risk may arise from a failure to manage operations, transactions and assets appropriately. It may arise from human error, an inability to deliver change on time or adequately, or the unavailability of technology services or the loss of customer data. Fraud and theft are sources of operational risk, as is the impact of natural and man-made disasters. It may also arise from a failure to take appropriate measures to protect assets or take account of changes in law.</p>	<p>To ensure operational risk is managed in a more standardised and consistent manner, work was started to enhance the operational risk management framework (ORMF).</p> <p>The threat to the security of RBS Group's information from cyber attacks is a key focus for operational risk as well as measures to address weaknesses after the major IT incident of 2012.</p>
Capital adequacy risk	<p>Capital adequacy risk arises from inefficient management of capital resources.</p>	<p>The RBSH Group's Core Tier 1 ratio on a CRR transitional basis was 16.2%. RBSH Group plans for and maintains an adequate amount and mix of capital consistent with its risk profile. The amount of capital</p>

required is determined through risk assessment and stress testing.

Liquidity and funding risk

Liquidity and funding risk arise through the maturity transformation role that banks perform. RBSH Group exposed to capital adequacy risk if it manages its capital resources inefficiently.

As one of the primary operating entities of the RBS Group, RBSH Group's liquidity risk is monitored and managed centrally by the RBS Group in line with policies and processes set by the RBSH Group's Managing Board.

Liquidity and funding risk arises from day-to-day operations.

Reputational risk

Reputational risk can arise from the conduct of either RBSH Group as a whole or that of the individuals it employs; as well as its wider conduct, policies and practices.

The most material threat to RBSH Group's reputation continued to originate from historical conduct deficiencies. RBSH Group has been the subject of investigations and review in relation to (legacy) rate setting concerns, some which have resulted in dismissals.

*unaudited

Financial review Capital and risk management

Risk type	How the risk arises	2014 overview
Credit risk	The risk that RBSH Group will incur losses owing to the failure of a customer or counterparty to meet its obligations to settle amounts outstanding.	The RBSH Group manages credit risk based on a suite of credit approval and risk concentration frameworks and associated risk management systems and tools. Credit risk RWAs were €18.2 billion at 31 December 2014.
Market risk	The majority of the RBSH Group's traded market risk exposure arises in CIB and RCR through transactions in financial instruments including debt securities, loans, deposits and equities, as well as securities financing and derivatives. The majority of its non-traded market risk exposure arises from commercial banking activities from assets and liabilities that are not classified as held for trading.	Market risk RWAs remained broadly flat at €1.2 billion.
Country risk	Country risk arises from possible economic or political events in each country to which the RBSH Group has exposure, and from unfavourable conditions affecting daily operations in a country. It has the potential to affect all parts of the RBSH Group's portfolio across wholesale and retail activities that are directly or indirectly linked to the country in question.	The RBSH Group maintained a cautious stance as many clients continued to reduce debt levels. Balance sheet exposure to the eurozone countries continued to fall, and was down €6.8 billion to €2.5 billion reflecting risk reduction and capital management focus.
Business risk	The activities of several customer businesses, particularly CIB, expose the RBSH Group to country risk. Business risk exists at all levels of the organisation and is generated at the transaction level. It is affected by other risks the RBSH Group faces, which could contribute to any adverse changes in the bank's revenues or costs.	RBSH Group reduced its business risk profile as it made disposals through RCR, sold a large part of its Liquidity Portfolio and transferred out its business in Thailand.
Strategic risk	Strategic risk arises from strategic decisions that fail to reflect the operating environment, or which do not take adequate account of execution challenges. These include decisions related to the RBS Group products and	RBS Group announced the results of a strategic review with a defined plan to shift the business mix towards the UK and the retail and commercial banking segments, with the aim of a lower risk

services which have implications for profile.
profitability, risk, the customer base, and for
business growth.

Financial review Capital and risk management

Conduct risk*

Definition

Conduct risk is the risk that the behaviour of RBSH Group and its staff towards customers, or in the markets in which it operates, leads to unfair or inappropriate customer outcomes and results in reputational damage, financial loss or both. The damage or loss may be the result of breaches of regulatory rules or laws, or of failing to meet customers' or regulators' expectations.

Sources of risk

Conduct risk exists across all stages of RBSH Group's relationships with its customers, from the development of its business strategies, through governance arrangements, to post-sales processes. Activities through which conduct risk may arise are diverse and include product design, marketing and sales, complaint handling, staff training, and handling of confidential and non-public price sensitive information. Conduct risk also exists if RBSH Group does not take effective action to prevent fraud, bribery and money laundering.

Governance

Effective conduct risk management is a commercial imperative for the bank: customers, clients and counterparties demand it as a precursor to building trust.

Conduct & Regulatory Affairs (C&RA) is responsible for defining appropriate standards of conduct, and for designing the framework for managing conduct risk, driving adherence, and overseeing remediation activity. It also provides appropriate controls, challenge and oversight to ensure good customer outcomes. In so doing, C&RA acts as a second line of defence control function.

Key elements of the governance structure are set out below:

- The C&RA Executive Committee considers emerging issues material to the C&RA strategy, and implements Board and Executive Committee risk management policy decisions; and
- The Financial Crime Accountable Executive Committee (accountable to the Executive Risk Forum) ensures that the customer businesses and the Services function fulfil strategic objectives by identifying and managing their financial crime risks effectively.

Controls and assurance

Under the RBS Group Policy Framework, C&RA owns 26 conduct risk policies, grouped under employee, corporate and market conduct, and; and conduct towards customers. Each policy is designed to provide both high-level direction and RBS Group-wide requirements. The policies and chapters are designed to ensure RBS Group meets its regulatory obligations; and to provide the necessary clarity for staff on their conduct obligations.

Assurance and monitoring activities are essential to help measure the extent to which RBS Group manages its delivery of specific customer outcomes. During 2014, in addition to the provision of risk-based assurance over key conduct, financial crime, systems and infrastructure topics, the C&RA assurance function provided RBS Group-wide assurance in support of Financial Conduct Authority (FCA) attestations, principally those relating to complaints and anti-money laundering (AML).

Risk assessments are used to identify material conduct risks and key controls across all business areas. The risk assessment process is designed to confirm that risks are effectively managed and prioritised and controls are tested to verify that they operate effectively.

Scenario analysis is used to assess the impacts of extreme but plausible conduct risks including financial crime. The scenarios assess the exposures that could significantly affect RBS Group's financial performance or reputation and are an important component in the operational risk framework and capital model.

Risk appetite

RBS Group has articulated a customer-focused vision to be the leading UK bank for trust, customer service and advocacy by 2020. In line with this, C&RA has evolved from focusing on policy compliance towards considering the wider business implications of placing customers at the heart of the business.

A conduct risk appetite framework is being developed to ensure that RBS Group's risk profile is based on its strategic risk objectives, with quantitative targets supplemented by qualitative criteria focused on attaining good customer outcomes, upholding market integrity, meeting stakeholder expectations and promoting a strong risk culture. Work to refine and embed the risk appetite framework and associated control processes continues in 2015.

Risk monitoring and measurement

C&RA works closely with the customer facing businesses to assess business models, strategy and products and influence better outcomes for customers.

RBS Group's senior boards and committees receive updates on conduct risk exposures and action plans through monthly C&RA initiated reporting. The reporting has been enhanced to be more focused, forward-looking and action-oriented.

An annual Money Laundering Reporting Officer's Report is submitted to the RBS Group Board and the FCA. Covering the operation and effectiveness of the systems and controls in place to comply with Anti-Money Laundering law and regulation, it also describes RBS Group's AML framework. In addition, it covers the systems and controls in place to prevent the financing of terrorism and to ensure compliance with sanctions as well as embargoes and export controls imposed by the UN, governments and other supranational bodies.

The RBS Group Audit Committee is provided with an annual Whistleblowing Update Report. It details cases by internal reporting categories based on the Public Interest Disclosure Act (1998) category, identifies underlying causal and subject trends, and highlights the outcome of investigations and actions taken.

C&RA is working with the business franchises to define the data required to ensure appropriate customer outcomes are delivered and are compliant with the Basel Committee on Banking Supervision principles for effective risk data aggregation and risk reporting. RBS Group's ability to aggregate, analyse and report conduct risk internally is being enhanced so it can assess the effectiveness of mitigating actions.

Financial review Capital and risk management

Operational risk*

Definition

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or external events. It arises from day-to-day operations and is relevant to every aspect of the business.

Operational risks may have a direct customer or reputational impact (for example, a major IT systems failure or fraudulent activity) or both. Operational risk failures may also have a link with conduct risk as evidenced by customer complaints made in connection with Payment Protection Insurance.

Sources of risk

Operational risk may arise from a failure to manage operations, transactions and assets appropriately. It may arise from forms of human error, an inability to deliver change on time or adequately, or the unavailability of technology services or the loss of customer data. Fraud and theft are sources of operational risk, as is the impact of natural and man-made disasters. It may also arise from a failure to take appropriate measures to protect assets or take account of changes in law.

Governance

A strong operational risk management function is vital to support profitability. Better management of operational risk directly supports RBS Group's strategic objective of improving stakeholder confidence and is vital for stability and reputational integrity.

The operational risk function, an independent second line of defence, plays a leadership role and seeks to achieve a robust risk management framework and culture across the bank.

The operational risk function is responsible for the design and maintenance of the Operational Risk Management Framework. The Operational Risk Policy and associated standards are incorporated in the RBS Group Policy Framework and provide direction for the consistent identification, assessment, management, monitoring and reporting of operational risk.

The Operational Risk Executive Committee (OREC), which is a sub-committee of the Executive Risk Forum, acts on all operational risk matters. This includes; identifying and assessing material operational risks, encompassing both current and emerging material risks; reviewing and monitoring the operational risk profile; and reviewing and approving material policy changes.

Controls and assurance

Control Environment Certification (CEC) is used to review and assess the internal control framework.

Risk appetite

RBSH Group's operational risk appetite statement is agreed by the RBSH Group Managing and Supervisory Board. It comprises a number of specific measures of risk. To confirm that RBSH Group operates within the set risk appetite, the high-level statement is supplemented by specific tolerances for different types of operational risk. Operational risk appetite measures and frameworks are reviewed regularly and approved by the Supervisory Board.

The objective of operational risk management is not to remove operational risk altogether, but to manage it to an acceptable level, taking into account the customer journey and the cost of minimising the risk against the resultant reduction in exposure. Strategies to manage operational risk include avoiding undertaking a particular type of activity or operating in a particular market; transferring the risk to a third party; accepting the risk as a cost of doing business; or mitigating the risk by implementing controls.

Risk identification and assessment

Risk assessments are used to identify and assess material operational risks and key controls across all business areas. To provide a consistent categorisation of risks and controls across RBS Group and to support identification of risk concentrations, all risks and controls are mapped to the risk taxonomy and the control catalogue. Risk assessments are refreshed at least annually to ensure they remain relevant and capture any emerging risks.

The process is designed to confirm that risks are effectively managed and prioritised in line with the stated risk appetite. Controls are tested frequently to verify that they remain fit for purpose and operate effectively. Risk assessments are typically commenced in a workshop, bringing together subject matter experts and key stakeholders from across the bank. Financial and non-financial risk impacts are captured and a risk appetite decision is made.

In 2014 there was a continued focus on implementing and embedding risk assessments across the bank. This included the strengthening of links between risk assessments and other elements of the operational risk framework. In 2015, the risk framework will be further enhanced.

The New Product Risk Assessment (NPRA) process aims to ensure that the risks represented by new products (and material variations to existing products) are identified and assessed before launch. There is now a requirement to demonstrate that all products provide fair outcomes to customers.

Risk mitigation

Risks are mitigated by a suite of regularly assessed controls but, where the residual exposure is outside of risk appetite, the relevant customer business must decide how to reduce it.

RBS Group purchases insurance to provide the business with financial protection against specific losses and to comply with statutory or contractual requirements.

Risk monitoring

Monitoring and reporting are part of RBS Group's operational risk management processes, which aim to ensure that risks and issues are identified, escalated and managed quickly.

Risk measurement

Scenario analysis is used to assess the impact of extreme but plausible operational risks and is a key input to the capital model. It provides a forward-looking basis for managing risk exposures, with a structured and consistent approach to scenario scoping and measurement.

*unaudited

Financial review Capital and risk management

Event and loss data management

The event and loss data management process aims to ensure compliance with standard requirements for the management of operational risk events and the capture of loss data. It also entails reporting operational risk events that meet defined threshold criteria to RBSH Group senior management. RBS Group has continued to focus on the timely and accurate capture of operational risk losses; the use of a single RBS Group-wide repository of operational risk events; and the escalation of material operational risk events.

All losses and recoveries associated with an operational risk event are reported against their financial accounting date. A single event can result in multiple losses (or recoveries) that may take time to crystallise. Losses and recoveries with a financial accounting date in 2014 may relate to events that occurred, or were identified in, prior years.

Capital

RBSH Group calculates the Pillar 1 capital requirement for operational risk using the standardised approach. For 2014, RBSH Group's minimum Pillar 1 capital requirement was €58 million.

Financial review Capital and risk management

Regulatory risk*

Definition

Regulatory risk is the risk of material loss or liability, legal or regulatory sanctions, or reputational damage, resulting from the failure to comply with (or adequately plan for changes to) relevant official sector policy, laws, regulations, or major industry standards.

Sources of risk

Regulatory risk arises from the regulatory, business or operating environment and from RBSH Group's response to it.

Governance

C&RA maintains well-established policies and supporting processes to ensure timely identification of, and effective responses to, changes in official requirements affecting the bank. C&RA also maintains a structured and open engagement with regulators. That engagement underpins a range of other policies and processes that address on-going compliance with regulatory obligations (refer to the section on conduct risk for further information).

To help manage the risks, the Mandatory Change Advisory Committee (MCAC), chaired by C&RA, was established. The MCAC reports to the Bank-Wide Investment Committee, and comprises representatives of the bank's customer businesses and functions. The MCAC acts as the 'reception committee' for reviewing externally mandated changes that may affect RBS Group and recommending appropriate responses, including the timely mobilisation of change implementation activities. In doing so, it agrees business or function owners of individual risks; and commissions and reviews impact assessments from customer businesses and functions. RBS Group Board and Executive Committee oversight of changes to regulatory requirements is supported by the MCAC (refer to above).

C&RA's Regulatory Developments team maintains and develops RBS Group Political, Legislative and Regulatory Environment Policy and supporting documents, together with associated processes, tools and governance. It also oversees the regulatory developments operating framework, to ensure it meets the needs of all businesses and functions, and maintains the Relationships with Regulators Policy.

Risk appetite

RBS Group believes that maintaining a strong regulatory risk framework is fundamental to ensuring sustainable growth, rebuilding its reputation and maintaining stakeholder confidence. Accordingly, its stated regulatory risk and compliance risk appetite is for no material or widespread breaches of rules, expectations, regulations or laws, individually or in aggregate. However, it also recognises that genuine errors occur, and so it accepts limited, non-material regulatory risk and subsequent loss.

Risk monitoring and measurement

C&RA ensures appropriate reporting of all material regulatory reviews and other regulatory developments worldwide to the appropriate bank-wide committees, including the RBS Group Board, the RBS Group Audit Committee, and the RBS Group Risk Committee. Half-yearly reporting to the Group Audit Committee also captures all material investigations and tracks the status of, and trends in, key regulatory relationships.

Regulatory risk remained a high priority during 2014, as policymakers and regulators continued to strengthen regulation and supervision in response to the events of 2007 and 2008. This resulted in high levels of interaction between RBS Group and supervisory authorities through meetings, requests for information, visits and investigations, as well as in policy developments and proposals for new rules.

Risk mitigation

C&RA also communicates information on regulatory developments and follow-up engagement with customer-facing businesses and functions, helping them identify and execute any required mitigating changes to strategy or business models. The key regulatory policies are reviewed annually.

Early identification and effective management of changes in legislation and regulation, as well as other requirements, is critical to the successful mitigation of regulatory risk. All regulatory and compliance changes are managed to ensure timely compliance readiness. Those changes assessed as having a 'high' or 'medium-high' impact are managed especially closely, with the aim of mitigating the impact through, for instance, changes to strategy or business activities, or external engagement

*unaudited

Financial review Capital and risk management

Reputational risk*

Definition

Reputational risk is the risk to RBSH Group's public image owing to a failure to meet stakeholders' expectations in relation to performance, conduct and business profile. Stakeholders include customers, investors, employees, suppliers, government, regulators, special interest and consumer groups, media and the general public.

Sources of risk

Reputational risk can arise from the conduct of either RBSH Group as a whole or that of the individuals it employs; from the activities of customers and the countries in which they operate; from the products RBSH Group offers and the transactions it supports; and from its operations and infrastructure.

Governance

Managing reputational risk is taken very seriously, with RBS Group Board-level oversight reinforced by a Reputational Risk Policy, and by governance frameworks across business franchises.

The RBS Group Board and the Executive Committee have the ultimate responsibility for managing RBS Group's reputation although all staff have some responsibility. The RBS Group Board has set RBS Group's Purpose, Vision and Values, which outline the objective, which is "to be trusted, respected and valued by our customers, shareholders and communities". Refer to the Risk governance section on pages 26 to 30.

The Sustainable Banking Committee is responsible for overseeing and challenging how management is addressing sustainable banking and reputation issues including risk appetite for environmental, social and ethical (ESE) issues.

The RBS Group Board's oversight of reputational issues is supported by the senior RBS Group-wide Reputational Risk Forum (RRF) which opines on cases that represent a material reputational risk to the whole organisation. The RRF, which has delegated authority from the Executive Risk Forum, also acts as a central forum to review thematic issues and risk appetite positions. Business franchises also have in place reputational risk approval fora to deliberate on customers, transactions, products or issues that may present a reputational risk for their businesses. An example is the Global Reputational Risk Committee in CIB.

Risk appetite

The Reputational and ESE Risk management team assists business franchises, as well as other control functions, to articulate risk appetite to manage reputational risk. Risk appetite positions for certain issues or markets, for example tax or money remitters, are developed through conducting research on legislation, regulation and potential reputational risk factors, undertaking peer analysis and engaging with internal and external stakeholders to discuss the issues. The risk appetite positions classify risks associated with a particular area into Normal, Sensitive and Prohibited. Customers or transactions designated Sensitive require enhanced due diligence and escalation to a reputational risk forum or individual while those rated Normal can be approved by the business without additional escalation. The team also helps set risk appetite to manage reputational risk related to business engagements and customer relationships in some sensitive industry sectors, such as mining and defence, through the ESE policy framework.

A Reputational Risk Policy has also been developed to help employees, businesses and functions effectively identify, assess and manage issues that potentially represent a reputational risk. In addition, other policies, such as those related to conduct, address key sources of reputational risk. These policies are implemented in accordance with the Policy Framework through business and functional policy standard owners. The effectiveness of these policies within each franchise is reported on through the Control Environment Certification process (Refer to the Operational risk section on page 36). Reputational aspects also form a core part of the RBS Group conduct risk framework, with a series of enhanced policies developed in line with conduct risk appetite.

Risk monitoring and measurement

Emerging reputational issues are identified by the business and relevant teams, including RBS Group Sustainability and Enterprise Wide Risk, which assess new and emerging business, sector and country risks for RBS Group. The Risk Management Monthly Report, provided to the Executive Committee and BRC, may also discuss reputational risks facing RBS Group, and the annual Sustainability Report covers progress on sustainability principles.

ESE ratings of customers and transactions are captured and analysed centrally by the Reputational and ESE Risk Team.

Risk mitigation

Reputational risk is mitigated through governance frameworks and training of staff to ensure early identification, assessment and escalation of customers, transactions or products with potential reputational risk, if appropriate. This includes creating appropriate fora, for example reputational risk committees or individual reputational risk approvers.

Also important is the setting of clear reputational risk appetite criteria, ensuring higher risk cases are escalated for senior level approval. Effective communication channels and incident response planning also ensure that cases that result in reputational impact are appropriately managed, for example by declining or exiting business or by ensuring incident management plans are implemented to manage the impact of negative media coverage.

Capital management*

Definition

RBS Group aims to maintain an appropriate level of capital to meet its business needs and regulatory requirements, and operates within an agreed risk appetite. The appropriate level of capital is determined based on the dual aims of: (i) meeting minimum regulatory capital requirements; and (ii) ensuring RBS Group maintains sufficient capital to uphold customer, investor and rating agency confidence in the organisation, thereby supporting its business franchises and funding capacity.

2014 overview

RBSH Group's Tier 1 ratio of 24.5% is higher than the end of 2013 primarily reflecting disposals of liquidity portfolio and the transfer of the Thailand entity to RBS plc. There were also further reductions in the RCR portfolio. In the second half of 2014 RBS Group paid down their Tier 2 capital to RBS N.V. of €2.5 billion and there was a dividend upstream of €300 million from RBS N.V. via RBSH Group to RBS Group. The Tier 2 capital was treated as a full capital deduction under the Capital Requirements Directive IV (CRD IV) rules.

Regulatory developments

Capital requirements regulation and directive

The European Union has implemented the Basel III proposals and a number of important changes to the banking regulatory framework through the Capital Requirements Regulation (CRR) and the Capital Requirements Directive (CRD) collectively known as the CRD IV package. The CRD IV package was implemented on 1 January 2014 with full implementation to be completed on 1 January 2019. As part of the implementation of the CRD IV package, the European Banking Authority's technical standards, which are legal acts specifying particular aspects of the CRD IV package, are either in progress to be finalised through adoption by the European Commission or now adopted.

The CRD IV package continues to require a total amount of capital equal to at least 8% of risk-weighted assets but the share that has to be of the highest quality, that is Common Equity Tier 1 capital, increased from 2% to 4.5%. The CRD IV package also introduces more stringent criteria for capital instruments, harmonised adjustments made to capital recognised for regulatory purposes and establishes new capital buffers to be phased in from 1 January 2014. Once fully implemented on 1 January 2019 the following minimum requirements must be met:

- Pillar 1 requirement of: CET1 of 4.5% of RWAs; Tier 1 of 6%; and total capital of 8%.
- Capital buffers: 'capital conservation buffer' of 2.5% of RWAs; 'countercyclical capital buffer' of up to 2.5%; 'Global-Systemically Important Bank (G-SIB)' surcharge of 1.5%; an 'other systemically important institutions buffer' for domestically or EU important institutions and if required by a member state an additional 'systemic risk buffer'.
- Minimum Tier 1 leverage ratio of 3%.

RBSH Group is managing the changes to capital requirements from new regulation (including model changes) and the resulting impact on the Common Equity Tier 1 ratio alongside its strategy of risk reduction and deleveraging. This is principally being achieved through the transfers/sales of countries and businesses to RBS plc and other interested parties, the continued run-off and disposal of RCR assets and deleveraging in CIB businesses.

The overall impacts of the regulatory changes are fully factored into the capital plans of RBSH Group and its businesses.

Banking Union: Single Supervisory Mechanism

On 15 October 2013, the EU Council formally adopted the Regulation on the Single Supervisory Mechanism (SSM) which became operational on 4 November 2014. The SSM is a new framework for banking supervision in Europe with the aims of ensuring the safety and soundness of the European banking system and increasing financial integration and stability in Europe.

The European Central Bank has to ensure that credit institutions not only meet the minimum prudential capital requirements set by the CRR/CRD IV but also have an additional buffer reflecting their individual intrinsic risk profile. This is organised through the SSM. The SSM has to ensure that credit institutions have sufficient capital to cover unexpected losses or survive severe stressed economic and market conditions. The joint capital decision is the key outcome of the Supervisory Review and Evaluation Process. In this process, the supervisor reviews the governance and internal control arrangements used by each individual bank to manage its risks (i.e. the Internal Capital Adequacy Assessment Process).

Overall this framework governs relations between the European Central Bank (ECB), national supervisors and banks and is an important step towards banking union in the EU.

Starting late in 2013 and prior to the adoption of the SSM on 4 November 2014 a comprehensive assessment of significant banks in the euro area (including RBSH Group) was conducted by the ECB. RBSH Group successfully passed the comprehensive assessment which was a rigorous “financial health check” that included a comprehensive risk assessment, a detailed asset quality review and a stress test. The results of the comprehensive assessment were made public by the ECB in October 2014.

Governance and approach

RBSH Group Asset and Liability Management Committee (ALCo) is responsible for ensuring RBSH Group maintains adequate capital at all times. The ALCo manages and plans RBSH Group capital levels taking into account current and projected capital levels and provides input to and oversees capital levels agreed in the annual Internal Capital Adequacy Assessment Process (ICAAP).

ALCo also plans and manages capital interaction with RBS Group. Such interaction would include, amongst other matters, ALCo considerations around RBSH Group’s strategic asset sales/transfers to RBS Group which would need to be capital neutral to RBS Group and are required to be structured in such way so as to satisfy DNB, ECB and PRA regulatory requirements. The ALCo is in turn ultimately governed by RBSH Group’s Managing Board who approve both ALCo and ICAAP capital management decisions.

*unaudited

Financial review Capital and risk management

Determining appropriate capital

RBSH Group aims to maintain an appropriate level of capital to meet its business needs (which include requirements of its parent company RBS Group) and its regulatory requirements and to operate within an agreed risk appetite. Determination of appropriate capital levels involves regular ALCo capital monitoring and planning, budgeting cycle forecasts, and an annual ICAAP. Capital plans are subjected to governance reviews, Managing Board oversight and approval and the review by the appropriate supervisory authority.

Through the annual ICAAP process, RBSH Group makes a determination of its desired capital levels based on maintaining a target external credit rating and risk appetite within both current and emerging regulatory requirements. Desired capital levels are evaluated through the application of both internally and externally defined stress tests that quantify changes in capital ratios under a range of scenarios. The stress tests are also used to identify management and recovery actions that RBSH Group would expect to implement should such eventualities arise. These stress assessments are a key part of capital management and contingency planning and therefore complement agreed capital buffers.

Monitoring and maintenance

RBSH Group operates a rigorous capital planning process via ALCo aimed at ensuring the capital position is controlled within the agreed parameters. This incorporates regular re-forecasts of the capital position of the RBSH Group. In the event that the projected position deteriorates beyond acceptable levels, RBSH Group would revise business plans accordingly. RBSH Group is managing the changes to capital requirements from new regulation and model changes and the resulting impact on the Common Equity Tier 1 ratio, focusing on risk reduction and deleveraging. This is principally being achieved through the transfers to RBS plc, the continued run-off and disposal of RCR assets and deleveraging in CIB as the business focuses on the most productive returns on capital.

The overall impacts of the regulatory changes are fully factored into the capital plans of RBSH Group and its businesses.

Capital allocation

Capital resources are allocated to RBSH Group's businesses based on both key performance parameters agreed by the RBS Group Board in an annual strategic planning process and the requirements of strategic asset transfer programmes and capital allocation requirements determined in consultation with RBS Group.

RBSH Group has regard to the supervisory requirements of De Nederlandsche Bank (DNB) and the ECB under the SSM. The DNB/ECB uses the capital ratio as a measure of capital adequacy in the Netherlands and Eurozone banking sector, comparing a bank's capital resources with its RWAs (the assets and off-balance sheet exposures are weighted to reflect the inherent credit and other risks).

*unaudited

Financial review Capital and risk management

Capital management* continued

Capital ratios and risk-weighted assets

RBSH Group aims to maintain an appropriate level of capital to meet its business needs and regulatory requirements. RBSH Group's capital ratios and RWAs are set out below.

	CRR transitional basis 2014 %	Basel 2.5 basis 2013 %	2012 %
Capital ratios			
Core Tier 1	16.2	20.5	11.7
Tier 1	24.5	23.2	13.9
Total	33.9	26.1	19.8
Risk-weighted assets	€m	€m	€m
Credit risk	18,179	15,094	26,336
Market risk	1,182	1,171	3,389
Operational risk	732	1,088	2,994
Settlement risk	28	32	20
	20,121	17,385	32,739

With effect from 1 January 2014 RBSH Group is regulated under the CRD IV package of Basel 3. The increase in RWAs in 2014 largely reflects the proportional consolidation of Saudi Hollandi Bank, which was previously treated as a capital deduction.

RBSH Group has used the basic indicator approach since 2013 to calculate the operational risk capital charge.

45

Financial review Capital and risk management

Liquidity and funding risk

Definition

Liquidity and funding risk is the risk that RBSH Group is unable to meet its financial obligations, including financing wholesale maturities or customer deposit withdrawals, as and when they fall due.

The risk arises through the maturity transformation role that banks perform. It is dependent on company specific factors such as maturity profile, composition of sources and uses of funding, the quality and size of the liquidity portfolio as well as broader market factors, such as wholesale market conditions alongside depositor and investor behaviour.

As one of the primary operating entities of the RBS Group, RBSH Group's liquidity risk is monitored and managed centrally by the RBS Group in line with the policies and processes set by the RBSH Group's Managing Board.

Liquidity risk

Policy, framework and governance

Internal liquidity policies are designed to ensure that RBSH Group:

- Has a clearly stated liquidity risk tolerance: appetite for liquidity risk is set by the Board as a percentage of the Individual Liquidity Adequacy Assessment (ILAA) stressed outflows, and is managed on a daily basis by legal entity, country, region and business. In setting risk limits the Board takes into account the nature of RBSH Group various activities, the overall risk appetite, market best practice and regulatory compliance.
- Has in place strategies, policies and practices to ensure that RBSH Group maintains sufficient liquidity: the risk management framework determines the sources of liquidity risk and the steps that can be taken when these risks exceed certain actively monitored limits. These actions include when and how to use the liquid asset portfolio, and what other adjustments to the balance sheet should be undertaken to manage these risks within the bank's risk appetite. RBSH Group maintains an adequate liquid asset portfolio appropriate to the business activities of RBSH Group and its risk profile.
- Incorporates liquidity costs, benefits and risks in product pricing and performance management: RBSH Group uses internal funds transfer pricing to ensure that these costs are reflected in the measurement of business performance and to correctly incentivise businesses to source the most appropriate mix of funding.

The Asset and Liability Management Committee (ALCo) sets and reviews the liquidity risk management framework and limits within the risk appetite set by the Managing Board. ALCo oversees the implementation of liquidity management across RBSH Group.

In setting risk limits the RBSH Group Board takes into account the nature of the RBSH Group's various activities, the RBSH Group's overall risk appetite and regulatory compliance.

Regulatory oversight*

With effect from November 2014, RBSH Group is subject to the European Central Bank's (ECB), supervisory regime for liquidity and each member of RBSH Group also complies with their local regulatory framework for the assessment and management of liquidity risk as well as meeting internal standards.

Measurement and monitoring

In implementing the RBSH Group's liquidity risk management framework, a suite of tools are used to monitor, limit and stress test the risks within the balance sheet. The limits control the amount and composition of funding sources,

asset and liability mismatches and funding concentrations, in addition to the level of liquidity risk.

Monitoring, reporting and internal limits are under regular review, given the need to appropriately represent and control the business through its considerable changes over time.

RBSH Group maintains a Contingency Funding Plan (CFP), which forms the basis of analysis and management actions to be undertaken in a liquidity stress. The CFP is linked to stress test results and forms the foundation for liquidity risk limits. The CFP sets out the circumstances under which the plan would be invoked; this includes material worsening of early warning indicators. It also prescribes a communications plan, roles and responsibilities, as well as potential management actions to take in response to various levels of liquidity stress. RBSH Group's CFP is fully integrated with the CFP of RBS Group.

Liquidity reserves

RBSH Group's liquidity portfolio is managed centrally by RBS Group's Treasury. In addition, local liquidity reserves are the responsibility of local Treasurers who report to the RBSH Group Treasurer functionally.

Within the liquidity portfolio RBSH Group holds cash at central banks (€0.8 billion) and high quality government securities (€1.8 billion).

During 2014 the RBSH Group undertook an exercise to sell c.€9bn of less-liquid legacy securities to de-risk the balance sheet and take advantage of favourable market conditions.

Funding risk

Funding markets

As part of the reduction in RBSH Group's balance sheet, funding is now concentrated with RBS Group, who given their active role in the money markets, and access to a broad funding base, provide funding to ensure RBSH Group's funding is sufficiently diversified.

RBSH Group accesses the wholesale funding markets directly or through its main operating subsidiaries via established funding programmes. The use of different entities to access the market from time to time allows RBSH Group to further diversify its funding mix and in certain limited circumstances demonstrate to regulators that specific operating subsidiaries have market access in their own right.

Financial review [Capital and risk management](#)

Credit risk

Risk management is conducted on an overall basis within RBS Group. Therefore the discussion on pages 49 to 56 refer principally to policies and procedures in RBS Group that also apply to RBSH Group.

Definition

Credit risk is the risk of financial loss due to the failure of a customer or counterparty to meet its obligation to settle outstanding amounts.

Sources of credit risk

The RBSH Group is exposed to credit risk through wholesale lending, derivatives and through off-balance-sheet products such as trade finance and guarantees. The RBSH Group is also exposed to credit risk as a result of debt securities held for liquidity management purposes.

Risk governance

The potential for loss is mitigated through a robust credit risk culture and a focus on sustainable lending practices.

Operating model

The RBS Group credit risk management function, which is led by the Group Chief Credit Officer (GCCO), acts as the ultimate authority for the approval of credit and is responsible for ensuring that credit risk is within the risk appetite set by the RBS Group Board. The function is also responsible for managing concentration risk and credit risk control frameworks as well as developing and ensuring compliance with credit risk policies. In addition, the function conducts RBS Group-wide assessments of provision adequacy.

Credit risk within RBSH Group is managed by the RBS Group credit risk function through an RBSH Group credit risk delegate who reports to the GCCO and has a functional line to the RBSH Group CRO. RBSH Group credit risk management activities include credit risk appetite setting, transaction and portfolio analysis, and ongoing credit risk monitoring and oversight.

The Executive Risk Forum (ERF) has delegated approval authority to the Credit Risk Committee (CRC) to act on credit risk matters. These include, but are not limited to, credit risk appetite and limits (within the overall risk appetite set by the RBS Group Board and the ERF), credit risk strategy and frameworks, credit risk policy and the oversight of the credit profile across RBS Group. There are separate CRCs for the wholesale and personal portfolios. These are chaired by the GCCO or delegate.

The ERF has delegated approval authority to the RBS Group Provisions Committee to manage provisions adequacy, both individual and collective. The RBS Group Provisions Committee, which is chaired by either the Chief Risk Officer or the GCCO, approves recommendations from lower-level provisions committees, which in turn have delegated approval thresholds for certain provision adequacy decisions.

Key trends in the credit risk profile of RBSH Group, performance against limits and emerging risks are set out in the Risk Report provided to the RBSH Group Risk Controls Committee (RCC) and the Supervisory Board.

The Risk Infrastructure function provides a variety of services that enable the credit risk management function to operate. These include reporting of credit risk data, risk assurance, provision of credit risk models, systems strategy and change management.

Controls and assurance

The RBS Group credit control and assurance framework has three key components: credit policy, policy compliance assessment and independent assurance. These apply to both wholesale and personal credit risk at both portfolio and individual customer level.

The first component is the RBS Group Credit Policy Standard, which is part of the RBS Group Policy Framework. It sets out the rules that must be followed to ensure that credit risks are identified and effectively managed through the credit lifecycle.

The second component is a policy compliance assessment activity that credit risk undertakes to provide the GCCO with evidence of the effectiveness of credit risk management controls in place across RBS Group. The results of these reviews support the self-certification that credit risk must complete every six months.

The third component of RBS Group credit assurance framework is the credit quality assurance activity carried out independently by Risk Assurance, which is part of the Risk Infrastructure function. Risk Assurance independently reviews lending activities to identify control breaches, assess portfolio quality and recommend process improvements. These findings are escalated to senior management and plans to address shortcomings are recorded and tracked in RBS Group's operational risk system. Risk Assurance's credit quality assurance activities are overseen by the RBS Group Audit Committee and the results of its reviews are regularly shared with the regulators.

In addition, controls and processes are regularly reviewed by RBS Group's Internal Audit (IA) function. IA provides assurance to the Group Audit Committee and senior executive that the main business risks have been identified and that effective controls are in place to manage these risks.

Risk management*

Risk appetite

Risk appetite across all risk types is set by RBS Group using specific quantitative targets under stress, including earnings volatility and capital adequacy. The credit risk appetite framework has been designed to reflect the factors that influence the ability to meet those targets. These include product and asset class, industry sector, single name and country concentrations. Any of these factors could generate higher earnings volatility under stress and, if not adequately controlled, undermine capital adequacy. Tools such as stress testing and economic capital are used to measure credit risk volatility and develop links between risk appetite targets and the credit risk appetite framework. The frameworks are supported by a suite of policies that set out the risk parameters within which franchises must operate. Impairments, and associated key metrics such as loan loss rates and provision coverage, are an integral part of standard credit risk portfolio reviews and are presented to CRC monthly. These metrics are also fully considered as part of the sector and product class appetite reviews. RBS Group also manages its exposures to counterparty credit risk closely, using portfolio limits and specific tools to control more volatile or capital-intensive business areas.

Financial review [Capital and risk management](#)

Risk monitoring and problem debt management

A key aspect of credit risk management relates to problem debt management, from early problem identification through to litigation and recovery of cash when there is no realistic potential for rehabilitation. Various tools and techniques are deployed during this part of the credit cycle including the offering of forbearance. For further information refer to the Wholesale credit risk management sub-section.

Impairments and write-offs

Internal measures of credit risk are stated gross of impairments. However, impairments and write-offs are used as key indicators of credit quality as part of the overall assessment of credit risk incurred by RBS Group. These are estimated as follows:

Impaired definition

A financial asset is impaired if there is objective evidence that an event or events since initial recognition of the asset has adversely affected the amount or timing of future cash flows from it. The loss is measured as the difference between the carrying value of the asset and the present value of estimated future cash flows discounted at the original effective interest rate.

For wholesale exposures, days-past-due measures are typically used to identify evidence of impairment. In corporate portfolios, a period of 90 days past due is used. In sovereign portfolios, the period used is 180 days past due. Other factors are considered including: the borrower's financial condition; a forbearance event; a loan restructuring; the probability of bankruptcy; or any evidence of diminished cash flows.

Provisioning

If there is objective evidence that an impairment loss has been incurred, the amount of the loss is measured as the difference between the asset carrying amount and the present value of the estimated future cash flows discounted at the financial asset's original effective interest rate. The current net realisable value of the collateral will be taken into account in determining the need for a provision. This includes cash flows that may result from foreclosure less the costs of obtaining and selling the collateral, whether or not foreclosure is probable. No impairment provision is recognised in cases where amounts due are expected to be settled in full on realisation of the security. RBSH Group uses primarily one of the following two different methods to assess the amount of provision required: individual; and latent.

Individually-assessed provisions

Loans and securities above a defined threshold deemed to be individually significant are assessed on a case-by-case basis. Assessments of future cash flows take into account the impact of any guarantees or collateral held. Estimating the amount and timing of future cash flows involves judgement based on the facts available at the time and assumptions related to the future financial performance of the customer or counterparty and any guarantors as well as future economic conditions and the value of collateral. Projected cash flows are reviewed on subsequent assessment dates as new information becomes available.

Latent loss provisions

In the performing portfolio, latent loss provisions are held against losses incurred but not identified before the balance sheet date. Latent loss provisions reflect probability of default (PD) and loss given default (LGD) as well as emergence periods. The emergence period is the period between the occurrence of the impairment event and the identification and reporting of a loan as impaired.

Emergence periods are estimated at a portfolio level and reflect the portfolio product characteristics such as coupon period and repayment terms, and the duration of the administrative process required to report and identify an impaired loan as such. Emergence periods in RBSH Group vary across different portfolios from 150 days for non-forborne exposures to 365 days for forborne exposures. They are based on actual experience within the particular portfolio and are reviewed regularly.

Latent provisions are computed by applying portfolio-level LGDs, PDs and emergence periods. The wholesale calculation is based on similar principles but there is no segmentation into portfolios. PDs and LGDs are calculated individually.

*unaudited

50

Financial review [Capital and risk management](#)

Available-for-sale portfolios

RBSH Group reviews its portfolios of available-for-sale financial assets for evidence of impairment, which includes: default or delinquency in interest or principal payments; significant financial difficulty of the issuer or obligor; and increased likelihood that the issuer will enter bankruptcy or other financial reorganisation. However, the disappearance of an active market because an entity's financial instruments are no longer publicly traded is not evidence of impairment. Furthermore, a downgrade of an entity's credit rating is not, in itself, evidence of impairment, although it may be evidence of impairment when considered with other available information. A decline in the fair value of a financial asset below its cost or amortised cost is not necessarily evidence of impairment. Determining whether evidence of impairment exists requires the exercise of management judgement. Unrecognised losses on RBSH Group's available-for-sale debt securities are concentrated in its portfolios of asset-backed securities. Such losses reflect the widening of credit spreads as a result of the reduced market liquidity in these securities and the current uncertain macroeconomic outlook in Europe. The underlying securities remain unimpaired. See also the AFS analysis table on page 63.

Sensitivity of impairments to assumptions

Key assumptions relating to impairment levels of secured lending relate to the valuation of the security and collateral held, the timing of asset disposals based on the underlying market depth and liquidity and customer cooperation. Assumptions on timing also include an assessment of the ease and timing of the enforceability of loan agreements in varying legal jurisdictions. Assumptions are made on a case by case basis in the case of individually assessed provisions and are often based on judgement.

Key assumptions relating to impairment levels of unsecured lending relate to economic conditions and the interest rate environment, which have a direct impact on customers' debt servicing capabilities. For individual impairments greater than £1 million, oversight is provided by the RBS Group Provisions Committee.

Write-offs

Impaired loans and receivables are written-off, that is, the impairment provision is applied in writing down the loan's carrying value partially or in full, when there is no longer any realistic prospect of recovery of part or all of the loan. For loans that are individually assessed for impairment, the timing of write-off is determined on a case-by-case basis. Such loans are reviewed regularly and write-offs may be prompted by bankruptcy, insolvency, forbearance and similar events.

Risk measurement*

Risk exposure measurement

RBSH Group uses a range of measures for credit risk exposures. The internal measure used, unless otherwise stated, is credit risk assets (CRA) consisting of:

- Lending exposure - measured using drawn balances and includes cash balances at central banks and loans and advances to banks and customers (including overdraft facilities, instalment credit and finance leases).
- Counterparty exposures - measured using the marked-to-market value of derivatives after the effect of enforceable netting agreements and regulator-approved models but before the effect of collateral. Counterparty exposures include rate risk management, which includes those arising from foreign exchange transactions, interest rate swaps, credit default swaps and options.
- Contingent obligations - measured using the value of the committed amount and including primarily letters of credit and guarantees.

CRA exclude issuer risk (primarily debt securities) and securities financing transactions. CRA take account of regulatory netting although, in practice, obligations are settled under legal netting arrangements that provide a right of legal set-off but do not meet the offset criteria under IFRS.

Risk models

RBS Group uses the output of credit risk models in the credit approval process -as well as for ongoing credit risk assessment, monitoring and reporting - to inform credit risk appetite decisions. These models may be divided into three categories:

Probability of default (PD)

PD models assess the probability of a customer failing its credit obligations over a one-year period.

- Wholesale models - A number of credit grading models consider risk characteristics relevant to different customer types. These models use a combination of quantitative inputs, such as recent financial performance, and qualitative inputs such as management performance or sector outlook. As part of the credit assessment process, RBS Group assigns each customer an internal credit grade based on its PD.

Exposure at default (EAD)

EAD models provide estimates of credit facility utilisation at the time of a customer default, recognising that customers may make further drawings on unused credit facilities prior to default or that exposures may increase due to market movements. Regulatory requirements stipulate that EAD must always be equal to, or higher, than current utilisation. Exposure can be reduced by a legally enforceable netting agreement.

*unaudited

Financial review [Capital and risk management](#)

Loss given default (LGD)

LGD models estimate the amount that cannot be recovered in the event of customer default. When estimating LGD, RBS Group's models assess both borrower and facility characteristics, as well as any credit risk mitigants. The cost of collections and a time-discount factor for the delay in cash recovery are also incorporated.

Changes to credit models

RBS Group reviews and updates models on an ongoing basis, reflecting the impact of more recent data, changes to products and portfolios, and new regulatory requirements. Extensive changes were made to wholesale models in 2012 and 2013. This continued in 2014 with further changes, notably in the corporate exposure class.

New PD models are being implemented for large corporate customers. The roll-out will be completed by mid-2015. The updated calibrations associated with these new models, which reference over 20 years of rating agency default experience, may result in downwards rating migrations across internal asset quality bands. For further information regarding the impact of this change refer to the Asset quality section on page 59.

Economic capital

The credit economic capital model is a framework that allows for the calculation of portfolio credit loss distributions and associated metrics over a given risk horizon for a variety of business purposes.

The model takes into account migration risk (the risk that credit assets will deteriorate in credit quality across multiple years), factor correlation (the assumption that groups of obligors share a common factor) and contagion risk (for example, the risk that the weakening of the sovereign's credit worthiness has a significant impact on the creditworthiness of a business operating in that country).

Risk mitigation

Risk mitigation techniques are used in the management of credit portfolios across RBS Group, typically to mitigate credit concentrations in relation to an individual customer, a borrower group or a collection of related borrowers. Where possible, customer credit balances are netted against obligations.

Mitigation tools applied can include: structuring a security interest in a physical or financial asset; use of credit derivatives, including credit default swaps, credit-linked debt instruments and securitisation structures; and use of guarantees and similar instruments (for example, credit insurance) from related and third parties.

When seeking to mitigate risk, at a minimum RBS Group considers the following:

- The suitability of the proposed risk mitigation, particularly if restrictions apply;
- The means by which legal certainty is to be established, including required documentation, supportive legal opinions and the steps needed to establish legal rights;
- The acceptability of the methodologies to be used for initial and subsequent valuation of collateral, the frequency of valuations and the advance rates given;
- The actions which can be taken if the value of collateral or other mitigants is less than needed;
- The risk that the value of mitigants and counterparty credit quality may deteriorate simultaneously;

- The need to manage concentration risks arising from collateral types; and
- The need to ensure that any risk mitigation remains legally effective and enforceable.

The RBS Group business and credit teams are supported by specialist in-house documentation teams. RBS Group uses industry-standard loan and security documentation wherever possible. However, when non-standard documentation is used, external lawyers are employed to review it on a case-by-case basis. For further information refer to the Wholesale credit risk management sub-section.

Wholesale credit risk management

Wholesale credit risk management focuses on the credit risks arising from activities with corporate and SME clients as well as banks, other financial institutions and sovereigns.

Risk appetite frameworks

Four formal frameworks are used to manage wholesale credit concentration risk. RBS Group continually reassesses its frameworks to ensure they remain appropriate for its varied business franchises and current economic conditions as well as to reflect further refinements in RBS Group's risk measurement models.

Through the overlay model, RBSH Group's concentration risks are captured in and primarily governed by, the RBS Group's risk control frameworks. However, concentration risks are actively monitored from an RBSH Group perspective through monthly reporting and appropriate action is taken if necessary.

Single name concentration

A single name concentration (SNC) framework addresses the risk of outsized loss arising from a concentration of credit risk to a single borrower or borrower group. The framework includes elevated approval authority, additional reporting and monitoring, and the requirement for plans to address exposures in excess of appetite.

*unaudited

Financial review [Capital and risk management](#)

SNC excesses are reviewed on a gross basis as well as on a net basis after taking mitigation into account. All net excesses are managed through an approved, customer specific, exposure management plan. To reduce its SNC exposures, RBS Group may decide to sell excess amounts or rely on mitigation. To be considered effective under the framework, mitigation must be “eligible”. Examples of eligible credit risk mitigants include cash collateral, government or bank guarantees, credit default swaps or trade insurance. Eligible credit risk mitigants must also be structurally effective, legally certain, enforceable and characterised by an appropriate maturity profile.

Sector concentration

Sector concentration risk is the risk of an outsized loss arising from a concentration of credit risk to customers in the same sector or across sectors that are susceptible to similar stress events. The sector concentration framework enables RBS Group to manage this risk and acts as one of the primary mechanisms for cascading the RBS Group Board-approved risk appetite to business franchises. It also details the controls for managing and reporting credit exposure to industry sectors.

The sector concentration framework was revised in 2014. Previously, sectors were classified according to size. Under the revised sector framework, sectors are classified according to their risk (based on EC and various qualitative factors) as well as size. This classification drives the level of oversight and frequency of sector reviews. Reviews may include an assessment of business strategy, credit risk profile, key risks and mitigants, the current and expected future external environment, vulnerability to stress events, regulatory developments and economic capital usage to derive a proposed risk appetite along with transaction acceptance standards.

Product and asset class concentration framework

Product and asset class concentration risk is the risk of an outsized loss arising from a concentration in certain products or asset classes. The product and asset class framework monitors specific credit risk types such as settlement or wrong-way risk and products such as long-dated derivatives or securitisations. These product and asset classes may require specific policies and expertise as well as tailored monitoring and reporting measures. In some cases specific limits and thresholds are deployed to ensure that the credit risk inherent in these lines of business and products is adequately controlled. Exposures are reviewed regularly in accordance with the product and asset class concentration framework. The reviews consider the risks inherent in each product or asset class, the risk controls applied, monitoring and reporting of the risk, the client base, and any emerging risks to ensure risk appetite remains appropriate.

Country concentration

The country concentration framework is described in the Country risk section on pages 72 to 77.

Risk assessment

The credit risk function assesses, approves and manages the credit risk associated with a borrower or group of related borrowers.

The Group Chief Credit Officer has established a framework of individual delegated authorities, which are set out in the RBS Group Credit Risk Policy. The framework requires at least two individuals to approve each credit decision, one from the business and one from the credit risk function. Both must hold appropriate delegated authority, which is dependent on their experience and expertise. Only a small number of senior executives hold the highest authority provided under the framework. While both parties are accountable for the quality of each decision taken, the credit risk approver holds ultimate sanctioning authority.

Assessments of credit risk must, at a minimum, specifically address the following elements:

- The amount, terms, tenor, structure, conditions, purpose and appropriateness of all credit facilities;
- Compliance with applicable RBS Group-wide and/or franchise-level credit policies;
- The customer's ability to meet obligations, based on an analysis of financial information and a review of payment and covenant compliance history;
- The source of repayment and the customer's risk profile, including its sector and sensitivity to economic and market developments, and any credit risk mitigation;
- Refinancing risk - the risk of loss arising from the failure of a customer to settle an obligation on expiry of a facility through the drawdown of another credit facility provided by RBSH Group or by another lender;
- Consideration of other risks such as environmental, social and ethical, regulatory and reputational risks; and
- The portfolio impact of the transaction, including the impact on any credit risk concentration limits or agreed business franchise risk appetite.

At a minimum, credit relationships are reviewed and re-approved annually. The renewal process addresses borrower performance, including reconfirmation or adjustment of risk parameter estimates; the adequacy of security; compliance with terms and conditions; and refinancing risk.

Financial review [Capital and risk management](#)

Risk mitigation

RBS Group mitigates credit risk through the use of netting, collateral and the use of market standard documentation.

The types of collateral RBS Group takes to mitigate the credit risk arising from wholesale lending varies according to the nature of the counterparty and its assets. The most common types are:

- Physical assets - These may include stock, plant, equipment, machinery, vehicles, ships and aircraft. Such assets are suitable collateral only if RBS Group can identify, locate, and segregate them from other assets on which it does not have a claim. RBS Group values physical assets in a variety of different ways, depending on the type of asset concerned and may rely on balance sheet valuations in certain cases.
- Receivables - These are amounts owed to RBS Group's counterparties by their own customers. RBS Group values them after taking into account the quality of its counterparty's receivable management processes and excluding any that are past due.

All collateral is assessed case-by-case to ensure that it will retain its value independently of the provider. RBS Group monitors the value of the collateral and, if there is a shortfall, will seek additional collateral.

Problem debt management

Early problem identification

Each segment has defined early warning indicators (EWIs) to identify customers experiencing financial difficulty, and to increase monitoring if needed. EWIs may be internal, such as a customer's bank account activity, or external, such as a publicly-listed customer's share price. If EWIs show a customer is experiencing potential or actual difficulty, credit officers within the business franchise may decide to place the customer on the Watchlist.

Watchlist*

For customers not managed in RCR, there are three Watch classifications - Amber, Red and Black - reflecting progressively deteriorating conditions. Watch Amber customers are performing customers who show early signs of potential financial difficulty, or have other characteristics that warrant closer monitoring. Watch Red customers are performing customers who show signs of declining creditworthiness and so require active management usually by Restructuring (formerly known as Global Restructuring Group). The Watch Black portfolio includes AQ10 exposures.

Once on the Watchlist, depending on the severity of the financial difficulty and the size of the exposure, the customer relationship strategy is reassessed by credit officers, by specialist credit risk or relationship management units in the relevant business or by Restructuring. In accordance with RBS Group-wide policies, a number of mandatory actions are taken, including a review of the customer's credit grade and facility and security documentation.

In more material cases, a forum of experienced credit, portfolio management and remedial management specialists in either the relevant business or Restructuring may reassess the customer relationship strategy.

Appropriate corrective action is taken when circumstances emerge that may affect the customer's ability to service its debt. Such circumstances include deteriorating trading performance, imminent breach of covenant, challenging macroeconomic conditions, a late payment or the expectation of a missed payment.

For all Watch Red cases, credit specialists in the relevant business are required to consult with their counterparts in Restructuring on whether the relationship should be transferred to Restructuring (for more information on Restructuring, refer to the section below). Watch Red customers that continue to be managed by the business tend to

be those requiring subject matter expertise that is available in the business rather than in Restructuring.

Remediation strategies available in the business include granting a customer various types of concessions. Any decision to approve a concession will be a function of specific country and sector appetite, the credit quality of the customer, the market environment and the loan structure and security. For further information, refer to the Forbearance section below.

Other potential outcomes of the relationship review are to: take the customer off the Watchlist; offer additional lending and continue monitoring; transfer the relationship to Restructuring if appropriate; or exit the relationship altogether.

Customers managed in RCR are by their nature subject to heightened scrutiny and regular review against specific disposal plans. RCR customers are separately identified in RBS Group's internal Watchlist reporting, with their Watchlist classification based on asset quality.

Restructuring

Separately to the Credit Risk management function, the Restructuring team manages RBS Group's wholesale problem debt portfolio in cases where its exposure to the customer exceeds £1 million. In addition, Restructuring has a specialist credit function, the Strategy Management Unit, for distressed bilateral lending where the exposure is between £250,000 and £1 million.

The factor common to all customers managed by Restructuring is that RBS Group's exposure is outside risk appetite. The primary function of Restructuring is to restore customers to an acceptable credit profile, minimise losses to RBS Group and protect RBS Group's capital.

Specialists in Restructuring work with customers experiencing financial difficulties, and showing signs of financial stress, with the aim of restoring their business to financial health whenever possible. The objective is to find a mutually acceptable solution, including repayment, refinancing or transfer to another bank if that is the customer's preferred option.

*unaudited

Financial review [Capital and risk management](#)

The specialists conduct a detailed assessment of the viability of the business, as well as the ability of management to deal with the causes of financial difficulty, focusing on both financial and operational issues. Following the assessment, various options are discussed with the customer (which may involve debt restructuring or forbearance or both) and bespoke solutions are developed.

If the customer's finances are not viable and a mutually agreed exit is not possible, insolvency may be considered as a last resort. However, helping the customer return to financial health and restoring a normal banking relationship is always the desired goal.

Forbearance

Definition

Forbearance takes place when a concession is made on the contractual terms of a loan in response to a customer's financial difficulties.

Concessions granted where there is no evidence of financial difficulty, or where any changes to terms and conditions are within usual risk appetite (for a new customer), or reflect improving credit market conditions for the customer, are not considered forbearance.

A number of options are available. These are tailored to the customer's individual circumstances. The aim is to restore the customer to financial health and to minimise risk to RBS Group. To ensure that forbearance is appropriate for the needs and financial profile of the customer, RBS Group applies minimum standards when assessing, recording, monitoring and reporting forbearance.

At 31 December 2014, loans totalling €57 million (2013 - €44 million) were subject to forbearance procedures but had not reached legal completion, the forbearance completed in 2014 was €7 million (2013 - nil).

Types of wholesale forbearance

Wholesale forbearance may involve the following types of concessions:

Payment concessions and loan rescheduling, including extensions in contractual maturity, may be granted to improve the customer's liquidity. Concessions may also be granted on the expectation that the customer's liquidity will recover when market conditions improve. In addition, they may be granted if the customer will benefit from access to alternative sources of liquidity, such as an issue of equity capital. These options have been used in CRE transactions, particularly during periods where a shortage of market liquidity has ruled out immediate refinancing and made short-term collateral sales unattractive.

Debt may be forgiven, or exchanged for equity, where the customer's business condition or economic environment is such that it cannot meet obligations and where other forms of forbearance are unlikely to succeed. Debt forgiveness can be used for stressed corporate transactions and are typically structured on the basis of projected cash flows from operational activities, rather than underlying tangible asset values. Provided that the underlying business model, strategy and debt level are viable, maintaining the business as a going concern is the preferred option, rather than realising the value of the underlying assets.

The contractual margin may be amended to bolster the customer's day-to-day liquidity to help sustain its business as a going concern. This would normally be a short-term solution. As set out above, RBS Group would seek to obtain a return commensurate to the risk that it is required to take and this can be structured as set out above.

A temporary covenant waiver, a recalibration of covenants or a covenant amendment may be used to cure a potential or actual covenant breach. In return for this relief, RBS Group would seek to obtain a return commensurate with the risk that it is required to take. The increased return for the increased risk can be structured flexibly to take into account the customer's circumstances. For example it may be structured as either increased margin on a cash or payment in kind basis, deferred return instruments or both. While RBS Group considers these types of concessions qualitatively different from other forms of forbearance, they constitute a significant proportion of wholesale forborne loans and are therefore included in these forbearance disclosures.

Loans may be forborne more than once, generally where a temporary concession has been granted and circumstances warrant another temporary or permanent revision of the loan's terms. All customers are assigned a PD and related facilities a LGD. These are re-assessed prior to finalising any forbearance arrangement in light of the loan's amended terms and any revised grading is incorporated in the calculation of the impairment loss provisions for RBS Group's wholesale exposures. Where forbearance is no longer viable, RBS Group will consider other options such as the enforcement of security, insolvency proceedings or both.

The ultimate outcome of a forbearance strategy is unknown at the time of execution. It is highly dependent on the cooperation of the borrower and the continued existence of a viable business. The following are generally considered to be options of last resort:

- Enforcement of security or otherwise taking control of assets - Where RBS Group holds collateral or other security interest and is entitled to enforce its rights, it may enforce its security or otherwise take control of the assets. The preferred strategy is to consider other possible options prior to exercising these rights.
- Insolvency - Where there is no suitable forbearance option or the business is no longer sustainable, insolvency will be considered. Insolvency may be the only option that ensures that the assets of the business are properly and efficiently distributed to relevant creditors.

Impairments for forbearance

Wholesale loans granted forbearance are individually assessed in most cases and are not therefore segregated into a separate risk pool.

Forbearance may result in the value of the outstanding debt exceeding the present value of the estimated future cash flows. This may result in the recognition of an impairment loss or a write-off.

Provisions for forborne wholesale loans are assessed in accordance with normal provisioning policies. The customer's financial position and prospects as well as the likely effect of the forbearance, including any concessions granted, are considered in order to establish whether an impairment provision is required.

*unaudited

Financial review [Capital and risk management](#)

All wholesale customers are assigned a PD and related facilities a LGD. These are re-assessed prior to finalising any forbearance arrangement in light of the loan's amended terms and any revised grading incorporated in the calculation of the impairment loss provisions for RBS Group's wholesale exposures.

For performing loans, credit metrics are an integral part of the latent provision methodology and therefore the impact of covenant concessions will be reflected in the latent provision. For non-performing loans, covenant concessions will be considered in determining the overall provision for these loans.

In the case of non-performing forbore loans, the loan impairment provision assessment almost invariably takes place prior to forbearance being granted. The amount of the loan impairment provision may change once the terms of the forbearance are known, resulting in an additional provision charge or a release of the provision in the period the forbearance is granted.

The transfer of wholesale loans subject to forbearance from impaired to performing status follows assessment by relationship managers and the Credit Risk function in Restructuring. When no further losses are anticipated and the customer is expected to meet the loan's revised terms, any provision is written-off and the balance of the loan returned to performing status. This course of action is not dependent on a specified time period and follows the credit risk manager's assessment that it is appropriate.

Impairments

Impairments in the wholesale portfolio decreased compared with 2013. This reflected a better economic environment as well as an ongoing decrease of the RBSH Group credit portfolio following further transfers of assets to RBS Group.

Watchlist*

The following table shows a sector breakdown of credit risk assets of Watchlist Red counterparties managed by Restructuring.

At 31 December 2014, exposures to customers reported as Watchlist Red and managed by the business totalled €10.0 million (2013 - €10.2 million; 2012 - € 10.6 million).

	2014	2013	2012

Asset quality

The asset quality analysis presented below is based on RBSH Group's internal asset quality ratings which have ranges for the probability of default, as set out below. Customers are assigned credit grades, based on various credit grading models that reflect the key drivers of default for the customer type. All credit grades map to both an asset quality scale, used for external financial reporting, and a master grading scale for wholesale exposures used for internal management reporting across portfolios. Debt securities are analysed by external ratings agencies and are therefore excluded from the following table and are set out on page 61.

The following table details, for illustrative purposes only, the relationship between internal asset quality (AQ) bands and external ratings published by S&P, for illustrative purposes only. This relationship is established by observing S&P's default study statistics, notably the one year default rates for each S&P rating grade. A degree of judgement is required to relate the probability of default (PD) ranges associated with the master grading scale to these default rates given that, for example, the S&P published default rates do not increase uniformly by grade and the historical default rate is nil for the highest rating categories.

Asset quality band	Probability of default range	Indicative S&P rating
AQ1	0% - 0.034%	AAA to AA
AQ2	0.034% - 0.048%	AA-
AQ3	0.048% - 0.095%	A+ to A
AQ4	0.095% - 0.381%	A- to BBB-
AQ5	0.381% - 1.076%	BB+ to BB
AQ6	1.076% - 2.153%	BB- to B+
AQ7	2.153% - 6.089%	B+ to B
AQ8	6.089% - 17.222%	B- to CCC+
AQ9	17.222% - 100%	CCC to C
AQ10	100%	D

The mapping to the S&P ratings is used by RBSH Group as one of several benchmarks for its wholesale portfolios, depending on customer type and the purpose of the benchmark. The mapping is based on all issuer types rated by S&P. It should therefore be considered illustrative and does not, for instance, indicate that exposures reported against S&P ratings either have been or would be assigned those ratings if assessed by S&P. In addition, the relationship is not relevant for retail portfolios, smaller corporate exposures or specialist corporate segments given that S&P does not typically assign ratings to such issuers.

Market risk

Definition

Market risk is the risk of losses arising from fluctuations in interest rates, credit spreads, foreign currency rates, equity prices, commodity prices and other factors, such as market volatilities, that may lead to a reduction in earnings, economic value or both.

Sources of risk

RBSH Group is exposed to traded market risk through its trading activities and to non-traded market risk as a result of its banking activities. In many respects, it manages its traded and non-traded market risk exposures separately, as described in this section, largely in line with the regulatory definitions of the trading and non-trading books.

Traded market risk

The majority of RBSH Group's traded market risk exposure arises in CIB and RCR.

The primary objective of RBSH Group's trading activities is to provide a range of financing, risk management and investment services to its customers, including major corporations and financial institutions around the world. From a market risk perspective, RBSH Group's trading activities are included within the following markets: currencies; emerging markets; rates; asset-backed products; and traded credit.

RBSH Group undertakes transactions in financial instruments including debt securities, loans, deposits and equities, as well as securities financing and derivative transactions.

Some of these transactions involve trading or clearing financial instruments on an exchange, including interest rate swaps, futures and options. Holders of these instruments provide margin on a daily basis with cash or other security at the exchange.

Other products are not transacted on an exchange. Of these over-the-counter transactions, those with standard terms are cleared through central counterparties, while those that are more complex are settled directly with the counterparty and may give rise to counterparty credit risk, which RBSH Group manages actively.

Non-traded market risk

The majority of RBSH Group's non-traded market risk exposure arises from assets and liabilities that are not classified as held for trading.

The management of non-traded market risk is largely organised in line with the following two key categories: non-traded interest rate risk (NTIRR) and non-traded foreign exchange risk. RBSH Group has no material exposure to non-traded equity risk.

Interest rate risk

NTIRR arises from the provision to customers of a range of banking products that have differing interest rate characteristics. Therefore, when aggregated, these products form portfolios of assets and liabilities with varying degrees of sensitivity to changes in market interest rates. Mismatches in these sensitivities can give rise to volatility in net interest income as interest rates rise and fall.

Foreign exchange risk

Non-traded foreign exchange risk exposures for RBSH Group arise from two main sources:

- Structural foreign exchange risk - arising from the capital deployed in foreign subsidiaries, branches and associates and related currency funding where it differs from the euro; and
- Transactional foreign exchange risk - arising from customer transactions and profits and losses that are in a currency other than the functional currency of the transacting operation.

Equity risk

RBSH Group has no material exposure to non-traded equity risk.

Risk governance

RBS Group's Market Risk function is responsible for identifying, measuring, monitoring and controlling the market risk arising from both trading and non-trading activities.

For general information on risk governance, refer to the Risk governance section on pages 26 to 30.

More specific information on the governance, management and measurement of traded and non-traded market risk is provided in each of the dedicated sections below.

Traded market risk

Controls and assurance

RBS Group's market risk control and assurance framework has three key components: market risk policy; assurance approach policy; and independent assurance.

The Group Market Risk Policy Standard is part of the Group Policy Framework. It sets out the rules that RBS Group's businesses must follow to ensure that market risks are identified, measured and effectively managed.

The assurance approach policy comprises various elements, including the Risk and Control Assurance Framework process. This process ensures that, on an ongoing basis, specifically designed controls are in place for the risks that RBS Group faces to ensure that its exposure does not exceed its appetite. The adequacy and effectiveness of these controls are tested according to their rating, at least annually. The results of this testing are shared regularly at the Market Risk Governance and Control Committee.

Market Risk Assurance forms part of Risk Assurance. This independent second line of defence function provides assurance on the robustness of the market risk framework within RBS Group, via centralised analysis of the control framework, complemented by the application of expert judgement through qualitative reviews. These findings are escalated to senior management and plans to address any shortcomings are recorded and tracked in the operational risk system. Market Risk Assurance activities are also reported directly and independently to the Group Audit Committee.

For information on valuation controls, independent price verification and model validation, refer to page 69.

Financial review [Capital and risk management](#)

Risk appetite*

Market risk appetite is the level of market risk that RBSH Group accepts when pursuing its business objectives, taking into account stressed scenarios. RBSH Group has a comprehensive structure and controls in place aimed at ensuring that this appetite is not exceeded. RBSH Group's risk appetite is aligned with that of RBS Group.

RBS Group's qualitative market risk appetite is set out in policy statements. These define the governance, responsibilities, control framework and requirements for the identification, measurement, analysis, management and reporting of market risk arising from trading and non-trading activities. These policies are also cascaded, as appropriate, to the legal entities, franchises and businesses to ensure there is a consistent control framework throughout.

The quantitative market risk appetite is expressed in terms of limits for the trading and non-trading activities. These limits, which establish a set of comprehensive boundaries within which business activities are conducted and monitored based on business plans, are proposed by the Director of Market Risk.

Once RBS Group-level limits are approved by the Executive Risk Forum (ERF), the Director of Market Risk may cascade the limits further down the organisation as required. For each trading business, a document known as a dealing authority compiles details of all applicable limits and trading restrictions.

The limit framework at RBS Group level comprises value-at-risk (VaR), stressed value-at-risk (SVaR) and sensitivity and stress limits (for more details on VaR and SVaR, refer to pages 67 and 68). The limit framework at the lower levels also comprises additional metrics that are specific to the market risk exposures within its scope. These additional metrics aim to control various risk dimensions such as product type, exposure size, aged inventory, currency and tenor.

The limits are reviewed to reflect changes in risk appetite, business plans, portfolio composition and the market and economic environments.

Limit breaches at RBS Group level require escalation by the Director of Market Risk, as appropriate, to the ERF. Limit breaches at the lower levels require escalation by the head of the relevant market risk segment to the Director of Market Risk, as appropriate.

Risk assessment

Identification and assessment of traded market risk is achieved through gathering, analysing, monitoring and reporting market risk information by business line or at a consolidated level. Industry expertise, continued system developments and techniques such as stress testing are also used to enhance the effectiveness of the identification of all material market risks.

This is complemented by the New Product Risk Assessment process, which requires market risk teams to assess and quantify market risk associated with all proposed new products.

Risk monitoring

RBSH Group's traded market risk exposures are monitored against limits and analysed daily by market risk reporting and control functions. A daily report that summarises RBSH Group's market risk exposures against the limits is sent to the RBSH Group Head of Market Risk.

The market risk functions also prepare daily risk reports that detail exposures against a more granular set of limits and triggers.

Finally, a market risk update is included in the monthly risk management report sent to RBSH Group Risk and Control Committee (RCC).

Risk control

To ensure approved limits are not breached and that RBS Group remains within its risk appetite, triggers at RBS Group and lower levels have been set such that if exposures exceed a specified level, action plans are developed by the front office, Market Risk and Finance.

Counterparty Exposure Management

Management of the RBS Group's over-the-counter derivative counterparty credit risk and funding risk is carried out by the Counterparty Exposure Management (CEM) desk in CIB. CEM actively manages risk exposures and concentrations on behalf of both CIB and RCR. The hedging transactions CEM enters into are booked in the trading book and therefore contribute to the RBS Group's market risk VaR exposure and capital.

Risk measurement

Value-at-Risk

VaR is a statistical estimate of the potential change in the market value of a portfolio (and, thus, the impact on the income statement) over a specified time horizon at a given confidence level. For internal risk management purposes, RBS Group's VaR assumes a time horizon of one trading day and a confidence level of 99%. RBS Group's VaR model is based on a historical simulation, utilising data from the previous 500 days on an equally weighted basis.

At RBSH Group level, a different VaR model is employed. It remains based on a historical simulation model and assumes a time horizon of one trading day and a confidence level of 99%. However, it uses 401 observations of historical market data exponentially weighted with a weighted average history of six months.

VaR limitations*

Historical simulation VaR and RBSH Group's implementation have a number of known limitations, as summarised below, and RBSH Group's VaR should be interpreted in light of these.

- Historical simulation VaR may not provide the best estimate of future market movements. It can only provide a forecast of portfolio losses based on events that occurred in the past. The RBSH Group model uses the previous 401 days of data; this period represents a balance between model responsiveness to recent shocks and risk factor data coverage.
- The use of a 99% confidence level VaR statistic does not provide information about losses beyond this level, usually referred to as 'tail' risks. These risks are more appropriately assessed using measures such as Stressed VaR and stress testing.

*unaudited

Financial review [Capital and risk management](#)

- The use of a one-day time horizon will not fully capture the profit and loss implications of positions that cannot be liquidated or hedged within one day. This may not fully reflect market risk at times of severe illiquidity in the market when a one-day period may be insufficient to liquidate or hedge positions fully. Thus, the regulatory VaR that is used for modelled market risk capital uses a ten-day time horizon.
- RBSH Group computes the VaR of trading positions at the close of business. Positions may change substantially during the course of the trading day and so intra-day price volatility and trading may not be captured by the model.
- Risk factors relevant to a specific portfolio may be omitted, due to a lack of reliable data, or the use of proxy risk factors, for example. RBSH Group has developed the Risks not in VaR (RNIV) framework to address these issues.
- RBSH Group's approach is to supplement VaR with other metrics that addresses the above limitations to ensure appropriate coverage of all material risks.

VaR validation*

A dedicated model-testing team within RBS Group Market Risk works with the risk managers to:

- Test the accuracy of the valuation methods used in the VaR model on appropriately chosen test portfolios and trades.
- Apply in-house models to perform advanced internal back-testing to complement the regulatory back-testing.
- Identify risks not adequately captured in VaR, and ensure that such risks are addressed via the RNIV framework.
- Identify any model weaknesses or scope limitations and their impact.
- Identify and give early warning of any market or portfolio weakness that may become significant.

As well as being an important market risk measurement and control tool, the VaR model is also used to determine a significant component of the market risk capital requirement. Therefore, it is subject to not only ongoing internal review and validation but also regulator-prescribed back-testing.

VaR back-testing*

The main approach employed to assess the ongoing model performance is back-testing, which counts the number of days when a loss exceeds the corresponding daily VaR estimate, measured at a 99% confidence level. There are two types of profit and loss (P&L) used in back-testing comparisons: Clean P&L and Hypothetical (Hypo) P&L.

The Clean P&L figure for a particular business day is the firm's actual P&L for that day in respect of the trading activities within the scope of the firm's regulatory VaR model, adjusted by stripping out:

- Fees and commissions;
- Brokerage;
- Additions to, and releases from, reserves that are not directly related to market risk; and
- Any Day 1 P&L exceeding an amount of £500,000 (per transaction).

The Hypo P&L reflects the firm's Clean P&L excluding any intra-day activities.

A portfolio is said to produce a back-testing exception when the Clean or Hypo P&L exceeds the VaR level on a given day. Such an event may be caused by a large market movement or may highlight issues such as missing risk factors or inappropriate time series. Any such issues identified are analysed and addressed through taking appropriate remediation or development action. RBSH Group monitors both Clean and Hypo back-testing exceptions.

Regulatory back-testing is performed and reported on a daily basis. Market risk teams also perform back-testing at the lower levels as part of the internal ongoing VaR model validation.

The VaR model is categorised as green, amber or red. A green model is consistent with a good working model and is achieved for models that have four or fewer back-testing exceptions in a 12 month period. For RBSH Group's trading book, a green model status was maintained throughout 2014.

SVaR*

As with VaR, the SVaR technique produces estimates of the potential change in the market value of a portfolio, over a specified time horizon, at a given confidence level. SVaR is a VaR-based measure using historical data from a one-year period of stressed market conditions.

A simulation is run daily for 99% VaR on the current portfolio for each 260-day period from 1 January 2005 to the current VaR date, moving forward one day at a time. The SVaR is the worst VaR outcome of the simulated results.

This is in contrast with VaR, which is based on a rolling 401-day historical data set. For the purposes of both internal risk management and regulatory SVaR calculation, a time horizon of ten trading days is assumed with a confidence level of 99%.

Risks not in VaR (RNIV)*

The RNIV approach is used for market risks that fall within the scope of VaR and SVaR but that are insufficiently captured by the model methodology, for example due to a lack of suitable historical data. The RNIV framework has been developed to quantify these market risks and to ensure that RBSH Group holds adequate capital.

*unaudited

Financial review [Capital and risk management](#)

The need for an RNIV is typically identified in one of the following two circumstances: (i) as part of the New Product Risk Assessment process, when a risk manager assesses that the associated risk is not adequately captured by the VaR model; or (ii) as a result of a recommendation made by Model Risk or the model validation team when reviewing the VaR model.

The RNIVs provide a capital estimate of risks not captured in the VaR model and are regularly reported and discussed with senior management and the regulator. The methodology used in the material RNIV calculations is internally reviewed by Model Risk. Where appropriate, risk managers set sensitivity limits to control specific risk factors giving rise to the RNIV. RNIVs form an integral part of RBSH Group's ongoing model and data improvement efforts to capture all market risks in scope for model approval in VaR and SVaR. Since the introduction of the RNIV framework, progress has been made in transitioning RNIVs into the VaR model.

RBSH Group adopts two approaches for the quantification of RNIVs:

- A standalone VaR approach. Under this approach, two values are calculated: (i) the VaR RNIV; and (ii) the SVaR RNIV.
- A stress-scenario approach. Under this approach, an assessment of ten-day extreme, but plausible, market moves is used in combination with position sensitivities to give a stress-type loss number – the stressed RNIV value.

For each legal entity covered by RBS Group's PRA VaR model waiver, RNIVs are aggregated to obtain the following three measures: (i) Total VaR RNIV; (ii) Total SVaR RNIV; and (iii) Total stressed RNIV. A similar process is followed for the market risk in RBSH Group. In each case, no allowance is made for potential diversification in respect of material RNIVs.

Stress testing*

RBSH Group undertakes daily market risk stress testing to identify vulnerabilities and potential losses in excess of or not captured in VaR. The calculated stresses measure the impact of changes in risk factors on the fair values of RBSH Group's trading and available-for-sale portfolios. RBSH Group conducts scenario-based sensitivity analysis and historical and vulnerability-based stress testing.

Scenario-based sensitivity analysis measures the sensitivity of the current portfolio to defined movements in market risk factors. These risk factor movements and the resulting valuation changes are typically smaller than those considered in other stress tests.

Historical stress testing is a measure that is used for internal management. Using a similar technical framework to VaR, the current portfolio is stressed using historical data since 1 January 2005. The methodology simulates the impact of the worst loss that would be incurred by historical risk factor movements over the period, assuming a holding period specific to the risk factors and the businesses.

At present, a holding period of 60 business days is applied for credit risk factors (including in the case of ABS) and for the AFS portfolios that are held by CIB Treasury and generally a period of 10 business days for other risk factors. RBS Group reviews the holding periods annually.

Historical stress tests form part of the RBSH Group market risk limit framework and stress test exposures are discussed with senior management and relevant information is reported to the RBSH Group Risk and Control Committee (RCC), the RBS Group Board and the RBSH Group Managing Board. Breaches in RBSH Group's market

risk stress testing limits are monitored and reported.

Vulnerability-based stress testing begins with the analysis of a portfolio and expresses the key vulnerabilities of the portfolio in terms of plausible, so-called vulnerability scenarios under which the portfolio would suffer material losses. These scenarios can be historical, forward-looking, macroeconomic or hypothetical. Vulnerability-based stress testing is used for internal management information and is not subject to limits. However, relevant scenarios are reported to senior management.

In addition, RBS Group carries out macroeconomic stress tests periodically as part of the firm-wide, cross-risk capital planning process. The scenario narratives are translated into risk factor shocks using historical events and insights by economists, risk managers and the front office. Market risk stress results are combined with those for other risks into the capital plan that is presented to the RBS Group Board. The cross-risk capital planning process is conducted twice a year, in April/May and October/November, with a planning horizon of five years. The scenario narratives cover both regulatory scenarios such as the PRA Anchor and the Federal Reserve Comprehensive Capital Analysis and Review and macroeconomic scenarios identified by the firm such as a euro crisis and a China hard landing.

Calculation of regulatory capital*

The market risks subject to capital requirements under Pillar 1 are primarily interest rate, credit spread and equity risks in the trading book. Interest rate and equity risks are split between general and specific risks. General risks represent market risks due to a move in a market as a whole, such as a main index or yield curve, while specific risks represent market risks arising from events particular to an underlying issuer.

Firms can choose from two broad methodologies to calculate their market risk capital charge: (i) the standard rules, whereby regulator-prescribed rules must be applied, and (ii) the internal model approach, where, subject to regulatory approval, a model such as VaR is used to calculate the capital charge.

The VaR model has been approved by the DNB to calculate regulatory capital for the trading book via a scaling approach of 10 days. RBSH Group's SVaR model has also been approved by the DNB for use in the capital requirement calculation.

The regulatory VaR and SVaR differ from internal VaR and SVaR as they cover only regulator-approved products, locations and legal entities. VaR and SVaR capture general and specific risks but not risks arising from the impact of defaults and rating changes associated with traded credit products and their derivatives.

The Incremental Risk Charge (IRC) model captures risks arising from defaults and rating changes for the more liquid traded credit instruments and their derivatives held in the trading book. It is calculated over a one year horizon to a 99.9% confidence level, and therefore represents a 1-in-1,000 loss over the following year.

Market risk

analyses

Trading VaR

The table below analyses the internal VaR for RBSH Group's trading portfolios segregated by type of market risk exposure.

	2014				2013				2012			
	Average	Period end	Maximum	Minimum	Average	Period end	Maximum	Minimum	Average	Period end	Maximum	Minimum
Trading VaR summary	€m	€m	€m	€m	€m	€m	€m	€m	€m	€m	€m	€m
Interest rate	2.1	1.8	4.8	1.1	1.7	1.1	3.4	0.7	3.0	2.0	7.4	1.8
Credit spread	2.1	1.8	4.0	0.1	0.2	0.1	0.9	—	1.4	0.8	3.9	0.8
Currency	1.4	1.5	3.0	0.6	1.1	0.8	2.6	0.4	1.7	1.3	11.3	0.6
Equity	0.5	0.2	1.3	0.1	0.3	0.1	1.1	0.1	2.1	0.7	9.7	0.5
Commodity	0.4	0.7	1.0	0.1	0.2	—	1.5	—	0.9	0.6	3.1	0.4
Diversification (1)		(3.3)				(0.5)				(2.8)		
Total	3.2	2.7	5.7	2.0	2.0	1.6	3.4	0.9	4.4	2.6	11.3	2.1

Note:

- (1) RBSH Group benefits from diversification, which reflects the risk reduction achieved by allocating investments across various financial instrument types, industry counterparties, currencies and regions. The extent of diversification benefit depends on the correlation between the assets and risk factors in the portfolio at a particular time.

Key points

- The main driver of the higher VaR utilisation in 2014 was an increase in volatility related to an onshore renminbi currency position that RBSH Group holds as a result of the unwinding of the equity business.
- In addition, improvements to certain information technology architectures resulted in a degree of VaR volatility during H1 2014.

Valuation and independent price verification

Within RBS Group, traders are responsible for marking-to-market their trading book positions daily, ensuring that assets and liabilities in the trading book are measured at their fair value. Any profits or losses on the revaluation of positions are recognised daily.

Product controllers are responsible for ensuring that independent price verification processes are in place covering all trading book positions held by their business. Independent price verification and trader supervision are the key controls over front office marking of positions.

The validation of pricing models is discussed below.

Model validation

RBS Group's independent model validation framework governing both pricing models and risk models (including VaR) is described below.

RBS Group uses a variety of models to manage and measure market risk, as described below. These models comprise pricing models (used for valuation of positions) and risk models (for risk measurement and capital calculation purposes). They are developed in both RBS Group-level and lower-level functions and are subject to independent review and sign-off.

A dedicated independent model review and challenge function - Model Risk - performs reviews of relevant models in two instances: (i) for new models or amendments to existing models and (ii) as part of its ongoing programme to assess the performance of these models.

A new model is typically introduced when an existing model is no longer fit for purpose or a new product requires a new methodology or model to quantify the risk appropriately. Amendments are usually made when a weakness is identified during use of a model or following analysis either by the model developers or by Model Risk.

Pricing models*

Pricing models are developed by a dedicated front office quantitative team, in conjunction with the trading desk. They are used for the valuation of positions for which prices are not directly observable and for the risk management of the portfolio.

Any pricing models that are used as the basis for valuing books and records are subject to approval and oversight by asset-level modelled product review committees.

These committees comprise representatives of the major stakeholders in the valuation process - trading, finance, market risk, model development and model review functions.

The review process comprises the following steps:

- The committees prioritise models for review by Model Risk, considering the materiality of the risk booked against the model and an assessment of the degree of model risk, that is the valuation uncertainty arising from the choice of modelling assumptions.
- Model Risk quantifies the model risk by comparing front office model outputs with those of alternative models independently developed by Model Risk.
- The sensitivities derived from the pricing models are validated.
- The conclusions of the review are used by Market Risk to inform risk limits and by Finance to inform model reserves.

*unaudited

Financial review [Capital and risk management](#)

Risk models*

All new risk models are subject to review and sign-off by Model Risk.

All model changes are approved through model governance at the franchise level. Changes to existing models that have an impact on VaR exceeding 5% at legal entity level or 15% at a major business level are also subject to Model Risk review and sign-off as are all model changes that require regulator approval before implementation.

Model Risk's independent review comprises some or all of the following steps, as appropriate:

- Testing and challenging the logical and conceptual soundness of the methodology;
- Testing the assumptions underlying the model, where feasible, against actual behaviour. In its validation report, Model Risk will opine on the reasonableness and stability of the assumptions and specify which assumptions, if any, should be routinely monitored in production;
- Testing whether all key market risks have been sufficiently captured;
- Re-applying the proposed approach to verify that the same outcome is achieved;
- Comparing outputs with results from alternative methods;
- Testing parameter selection and calibration;
- Ensuring model outputs are sufficiently conservative in areas where there is significant model uncertainty;
- Confirming the applicability of tests for accuracy and stability; recalculating and ensuring that results are robust; and
- Ensuring appropriate sensitivity analysis has been performed and documented.

Based on the review and findings from Model Risk, an internal model governance committee with appropriate delegated authority considers whether a model can be approved for use and whether any conditions need to be imposed, including those relating to the remediation of material issues raised through the review process. Once approved through internal governance, the new or amended model is implemented. Models used by RBSH Group for regulatory reporting may additionally require DNB approval before implementation.

Model Risk also reassesses the appropriateness of approved risk models on a periodic basis according to the approved Periodic Review Policy. Each periodic review consists of a quick scan assessment and a subsequent decision by an internal model governance committee with appropriate delegated authority to re-ratify a model based on the quick scan assessment or to perform additional work prior to making a decision whether or not to re-ratify a model. In the quick scan assessment Model Risk assesses changes since the last approval along the following dimensions: change in size/composition of the portfolio, market changes, model performance, model changes, status of any outstanding issues, scheduled activities including work carried over from previous reviews.

This independent oversight also provides additional assurance that RBS Group holds appropriate capital for the market risk to which it is exposed.

The model testing team in Market Risk also performs regular VaR model testing, which is discussed in more detail under Risk measurement - value-at-risk on page 66.

Non-traded market risk*

RBSH Group manages non-traded market risk separately for non-traded interest rate risk and non-traded foreign exchange risk.

Controls and assurance

The ERF approves the non-traded market risk framework. The non-traded market risk policy statement sets out the governance and risk management framework through effective identification, measurement, reporting, mitigation, monitoring and control.

The models used for managing non-traded market risk are subject to the validation process described above.

Risk appetite*

RBSH Group's appetite for non-traded market risk is approved by the Supervisory Board limits as recommended by the Director of Market Risk and the ALCo. Further information on the process and the limit framework can be found on pages 41 to 44.

Interest rate risk

RBSH Group policy is to manage interest rate sensitivity in banking book portfolios within defined risk limits. Interest rate risk is transferred from the banking divisions to RBSH Group Treasury. Aggregate positions are then hedged externally using cash and derivative instruments, primarily interest rate swaps, to manage exposures within RBSH Group Asset and Liability Management Committee approved limits. RBSH Group is required to manage non-traded interest rate risk (NTIRR) through transactions with RBS plc to the greatest extent possible.

Residual risk positions are routinely reported to ALCo, the Managing and Supervisory Boards and the RCC.

Key measures used to evaluate NTIRR are subjected to approval granted by the ALCo. Limits on NTIRR are set according to the Non-Trading Interest Rate and Foreign Currency Risk Policy Statement and are subject to RBSH Group ALCo approval.

NTIRR is measured using a version of the same Value at Risk (VaR) methodology that is used by RBS Group. VaR metrics are based on interest rate repricing gap reports as at the reporting date. These incorporate customer products and associated funding and hedging transactions as well as non-financial assets and liabilities such as property, equipment, capital and reserves. Behavioural assumptions are applied as appropriate.

NTIRR one-day VaR at 99% confidence level for RBSH Group's retail and commercial banking activities was as follows. The figures exclude the banking books of Short Term Markets and Finance (STMF) which are managed by the traded market risk function.

*unaudited

Financial review [Capital and risk management](#)

	Average	Period end	Maximum	Minimum
	€m	€m	€m	€m
2014	8.6	6.3	9.9	5.4
2013	5.4	10.1	10.6	2.0
2012	6.0	5.2	9.6	4.4

Key point

- RBSH Group's exposure to interest rate risk fell from end-2013 to end-2014 as a result of further business transfers to RBS plc as well as shorter maturity assumptions for some capital securities.

Structural foreign currency exposures

RBSH Group does not maintain material non-trading open currency positions, other than the structural foreign currency translation exposures arising from its investments in foreign subsidiaries and associated undertakings and their related currency funding.

The table below sets out RBSH Group's structural foreign currency exposures.

	Net investments in foreign operations (1)	Net investment hedges	Structural foreign currency exposures
	€m	€m	€m
2014			
US dollar	1,047	(687)	360
Pound sterling	277	(215)	62
Other non-euro	2,025	(1,770)	255
	3,349	(2,672)	677
2013			
US dollar	1,176	(533)	643
Pound sterling	(15)	15	—
Other non-euro	1,768	(1,660)	108
	2,929	(2,178)	751
2012			
US dollar	1,259	(960)	299
Pound sterling	(397)	75	(322)
Other non-euro	2,558	(2,034)	524
	3,420	(2,919)	501

Note:

(1) Includes minority participations.

Key points

- RBSH Group's structural foreign currency exposure at 31 December 2014 was €0.7 billion, a net decrease of €0.1 billion on 2013. Net investments in foreign operations increased by €0.4 billion, while net investment hedges

increased by €0.5 billion.

- Changes in foreign currency exchange rates will affect equity in proportion to structural foreign currency exposure. A 10% strengthening in foreign currencies against the euro would result in a gain in equity of €75 million (2013 - €75 million; 2012 - €45 million), while a 10% weakening would result in a loss of €62 million (2013 - €75 million; 2012 - €55 million).

Country risk

Definition

Country risk is the risk of losses occurring as a result of either a country event or unfavourable country operating conditions. As country events may simultaneously affect all or many individual exposures to a country, country event risk is a concentration risk. For other types of concentration risks such as product, sector or single-name concentration, refer to the Credit risk section.

Sources of risk

Country risk has the potential to affect all parts of RBSH Group's portfolio across wholesale and retail activities that are directly or indirectly linked to the country in question. It arises from possible economic or political events in each country to which RBSH Group has exposure, and from unfavourable conditions affecting daily operations in a country.

Country events may include a sovereign default, a political conflict, a banking crisis or a deep and prolonged recession leading to possible counterparty defaults. Transfer or convertibility restrictions imposed by a country's government to stem the loss of foreign currency reserves may temporarily prevent counterparties from meeting their foreign currency payment obligations. Major currency depreciation may also affect a customer's income or debt burden, leading to default.

Unfavourable operating conditions may include the risk that a weak or creditor-unfriendly legal system within a country makes it difficult for RBSH Group to recover its claims in the event of customer default. An unreliable or unstable political system may lead to sudden compliance or reputational issues, or even expropriation without proper compensation.

Overview*

The conflict between Ukraine and Russia and the consequent escalating tensions between Russia and the West triggered an internal review of credit grades and limits.

The eurozone region emerged from recession, with some of the periphery countries recovering but growth in other countries, including Germany mostly sluggish. The EU's Single Supervisory Mechanism (SSM) commenced in November 2014 when the European Central Bank (ECB) assumed supervisory responsibility for the 130 largest banks of the eurozone, after concluding a detailed Asset Quality Review of their books, adjusting balance sheets and stress testing their capital positions. This SSM is the first pillar of the EU Banking Union that should reduce the risk of a repeat of the financial crisis over the longer term and that helps to support the quality of the bank's exposure, particularly in Europe. The other pillar will be the Single Resolution Mechanism, scheduled for 2016.

Important shifts in exposure occurred in 2014 as a result of the sale of a significant portion of RBSH Group's liquidity portfolio bonds following internal asset quality reviews and stress tests. The sale consisted of Spanish covered bonds, contributing to a reduction in Spanish net balance sheet exposure to €0.1 billion (2013 - €5.0 billion; 2012 - €6.0 billion).

Outlook for 2015*

In 2015, recovery in the advanced economies will likely remain uneven, with widening differentials between the US and Europe in growth, price levels and policies. The policy divergence will be amplified by the January 2015 ECB announcement of a €1,000 billion quantitative easing programme, aimed at reversing deflation and stimulating credit growth, while the US Federal Reserve is expected to start tightening interest rates in the second half of 2015.

The Chinese economy continues its structural slowdown; broad reforms aim at ensuring more sustainable long-term growth, but accumulated financial vulnerabilities bear downside risks. Growth in emerging markets is expected to be restrained by reduced capital inflows, depressed global commodity prices, and geopolitical conflicts, at times resulting in market volatility in the most vulnerable economies.

Governance*

All country exposures in RBSH Group are covered by RBS Group's country risk framework and a further set of specific RBSH Group country limits.

The RBS Group's country risk framework is set by the RBS Group Executive Risk Forum (ERF). This body delegates authority to set sovereign ratings, sovereign loss-given-default rates, and country Watchlist colours to the Group Chief Credit Officer (CCO), who may further delegate this authority to Strategic Risk. The ERF delegates authority to decide on country risk matters such as risk appetite, risk management strategy and framework, and risk exposure and policy to the Credit Risk Committee (CRC), which may further delegate to Country Risk Management (CoRM). This includes the setting of country limits, where appropriate including allocations for specific product groups. The CCO and CRC can escalate issues to the ERF when necessary.

For further information on governance, refer to the Risk governance section on pages 26 to 30.

Risk appetite*

RBS Group's country risk appetite framework has "top-down" and "bottom-up" components.

The top-down component is guided by RBS Group's global risk appetite; each country's internal sovereign rating; its strategic importance to RBS Group; the composition of RBS Group's portfolio; the funding profile; and an assessment of the potential for losses arising from possible key country risk events. This component provides a clear structure for the consideration of downside scenarios, the identification of countries that pose material concentration risks to RBS Group, and possible management actions.

Bottom-up analysis includes the risk/return relationship as well as reputational and regulatory risk.

*unaudited

Financial review [Capital and risk management](#)

RBS Group country limits are set for almost all countries. The UK is an exception, given its home country status. The US is another exception because of the specific local risk management structure, the size of the local portfolio and corresponding role in RBS Group-wide risk management, together with the country's strong ratings and corresponding role in RBS Group-wide risk management, together with the country's strong ratings.

Specific RBSH Group country limits (capped by the overall RBS Group limits) are set by the RBSH Group Risk and Control Committee, which reports to the RBSH Group Board. The RBSH Group country limits leave only limited headroom for countries to which most of the RBSH Group exposure has migrated and that are on run-off, while allowing sufficient room for a small number of 'active' countries where exposure is still awaiting migration. Exposures to the Netherlands (the RBSH Group home country), the UK and the US, are exempt from RBSH Group country limits.

Risk mitigation*

Part of RBSH Group's exposure is mitigated by guarantors or insurers (including export credit agencies), credit default swap (CDS) protection providers, or collateral in third countries, which will not be directly affected by a country event in the obligor's country. Further details on credit mitigation instruments are provided in the Credit risk section.

CDS contracts are used to hedge either entire portfolios or specific individual exposures. These transactions are subject to regular margining, which usually takes the form of cash collateral. For European peripheral sovereigns, credit protection is purchased from a number of major European banks, mostly outside the country of the reference entity. In a few cases where protection was bought from banks in the country of the reference entity, giving rise to wrong-way risk, this risk is mitigated through specific collateralisation and monitored weekly.

Risk monitoring*

The CoRM team monitors and reports on RBS Group exposures to all countries, and follows up in the event of limit excesses. CoRM has delegated authority up to specified levels to decide on RBS Group country limit increases; any such decision must be reported to the CRC. Persistent excesses are escalated to the CRC. Regular reports that summarise RBSH Group's remaining country risks are sent to senior RBSH Group management and RBSH Group limit excesses are followed up.

A country risk Watchlist process identifies emerging issues, facilitating the development of mitigation strategies.

Countries Watchlisted Amber are monitored closely. Appetite for countries Watchlisted Red is limited to short-term business in areas such as trade finance and derivatives, unless the country is deemed a strategic priority country.

Detailed portfolio reviews are conducted to ensure that the composition of country portfolios remains aligned with RBS Group's country risk appetite in light of economic and political developments. Changes in sovereign ratings or country Watchlist status trigger a review of appetite and, where appropriate, are referred to the CRC for discussion.

Measurement*

In this section, country exposure includes wholesale and retail net on-balance sheet exposure (drawn amounts under lending facilities, net of provisions, mark-to-market derivatives positions and issuer-risk debt securities positions in the banking book and trading book) together with off-balance sheet exposure (contingent obligations and undrawn commitments).

RBS Group also estimates its funding mismatches at risk of redenomination in vulnerable eurozone countries. These mismatches are defined as the exposures (net of provisions) that would be expected to convert to a new national

currency minus the liabilities that would be expected to re-denominate at the same time. The exposures exclude balances at low risk of redenomination, as identified through consideration of the relevant documentation, particularly the currency of exposure, governing law, court of jurisdiction, precise definition of the contract currency (for euro facilities), and location of payment.

Similar estimates are made for RBSH Group. It is noted that RBS Group has publicly stated it will support RBSH Group in case of need.

Basis of preparation

The tables in this section show RBSH Group's exposure at 31 December 2014, 2013 and 2012. Exposures are reported by country of operation of the obligor, except exposures to governments and individuals, which are shown by country of residence.

The country of operation is the country where the main operating assets of a legal entity are held, or where its main cash flows are generated, taking account of the entity's dependency on subsidiaries' activities.

Countries shown are those which had ratings of A+ or below from Standard and Poor's, Moody's or Fitch at 31 December 2014, where RBSH Group's balance sheet exposure (as defined in this section) to counterparties operating (or individuals residing) in them exceeded €0.5 billion. Also included are selected eurozone countries.

The exposures are stated before taking into account risk mitigants such as guarantees, insurance or collateral (with the exception of reverse repos) which may have been put in place to reduce or eliminate exposure to country risk events. The tables show net CDS positions separately, as RBSH Group may be either a net buyer or a net seller of protection.

Notes:

- (1) Net lending - Comprises loans and advances, including cash balances and risk elements in lending - net of provisions.
- (2) Debt securities - Comprise securities classified as available-for-sale (AFS), loans and receivables (LAR), held-for-trading (HFT) and designated as at fair value through profit or loss (DFV). All debt securities other than LAR securities are carried at fair value. LAR debt securities are carried at amortised cost less impairment. HFT debt securities are presented as long positions (including DFV securities) net of short positions per country. Impairment losses and exchange differences relating to AFS debt securities, together with interest, are recognised in the income statement. Other changes in the fair value of AFS securities are reported in AFS reserves.
- (3) Derivatives (net) - Comprise the mark-to-market (mtm) value of such contracts after the effect of legally enforceable netting agreements in line with the corresponding regulatory capital models, but before the effect of collateral.
- (4) Securities financing transactions (SFT) (net) - Comprise the mtm value of the cash and securities that are due to RBS Group at a future date under repurchase agreements, reverse repurchase agreements, stock borrowing, stock lending and equity financing transactions, after the effect of collateral intrinsic to the transaction and legally

enforceable netting agreements. Counterparty netting is applied as per the corresponding regulatory capital approach. Additional collateral called to offset mtm positions (variation margin) is not included.

- (5) Net balance sheet exposure - Comprises net lending, debt securities, derivatives (net) and SFT (net) exposures, as defined above.
- (6) Off-balance sheet - Comprises net letters of credit, guarantees, other contingent obligations and legally committed undrawn facilities.
- (7) Total exposure – Comprises net balance sheet exposure and off-balance sheet exposure, as defined above.
- (8) Credit default swaps (CDSs) - Under a CDS contract, the credit risk on the reference entity is transferred from the buyer to the seller. 'Fair value' (or 'mtm value') represents the balance sheet carrying value of the resulting exposure. The mtm value of CDSs is included in derivatives against the counterparty of the trade, as opposed to the reference entity. The notional is the par value of the credit protection bought or sold and is included against the reference entity of the CDS contract. The column 'CDS notional less fair value' represents the net effect on exposure should the CDS contracts be triggered by a credit event, assuming a zero recovery rate on the reference exposure. This net effect would be the increase in exposure arising from sold positions netted against the decrease arising from bought positions. For a sold position, the change in exposure equals the notional less the fair value amount; this represents the amount RBSH Group would owe to its CDS counterparties if the reference entity defaulted. Positive recovery rates would tend to reduce the gross components (increases and decreases) of those numbers. Exposures relating to credit derivative product companies (CDPCs) and related hedges as well as Nth-to-default basket swaps have been excluded, as they cannot be meaningfully attributed to a particular reference entity or country.
- (9) Sovereign - Comprises central, regional and local government, and central banks.
- (10) Eurozone periphery - Italy, Spain, Ireland, Portugal, Greece and Cyprus.
- (11) Other eurozone - Austria, Estonia, Finland, Latvia, Malta, Slovakia and Slovenia. The Netherlands, while being a eurozone country, has been excluded in these country risk tables as RBSH Group is based in the Netherlands.

Financial review [Capital and risk management](#)

Key points*

- During 2014, the US dollar and sterling appreciated against the euro by 13.3% and 7.0% respectively, impacting exposures.
- Balance sheet and off-balance sheet exposures to nearly all countries were further wound down during 2014, after the major exposure migrations to RBS plc in 2012-2013.
- Total eurozone (excluding the Netherlands) – net balance sheet exposure declined by €6.8 billion or 73% to €2.5 billion, largely caused by the sale of AFS debt securities exposure, mostly to Spain, from the bank's liquidity portfolio.
- Eurozone periphery – net balance sheet exposure decreased to €1.2 billion, a reduction of €5.6 billion or 82%, largely caused by the sale of Spanish AFS securities.
- Italy - AFS government bonds exposure decreased by €0.4 billion. The remaining exposure of €1.0 billion mainly comprised €0.7 billion of (largely collateralised) derivatives exposure to banks and €0.2 billion of AFS government bonds. The latter was covered by bought CDS protection.
- Spain - net balance sheet exposure decreased to less than €0.1 billion, due to sales of €4.8 billion (mostly covered bonds) from RBSH Group's liquidity portfolio, under favourable market conditions. These sales also removed risk concentrations in Spanish banks and commercial real estate.

◦ Ireland - The AFS government bonds held in the liquidity portfolio (€0.2 billion) were sold.

◦ Funding mismatches - the estimated funding mismatch at risk of redenomination at 31 December 2014 remained approximately €0.5 billion for Italy, and was reduced to minimal for Spain (down from €5.0 billion, due to the sale of AFS bond holdings). The net positions for Ireland, Portugal, Cyprus and Greece all continued to be minimal. With the possible exception of Greece, risks of eurozone break-up (redenomination events) have materially receded since 2011-2012, owing to major improvements in liquidity conditions, driven by the availability of substantial new tools for the European Central Bank, the establishment of the European Stability Mechanism and member countries' progress on reducing imbalances.

- India - lending increased by €0.1 billion, reflecting currency movements and some increases in the non-bank FI and electricity sectors. In AFS debt exposure, €0.2 billion of bonds issues by banks were replaced by government bonds.
- China - lending to banks and off-balance sheet exposure decreased by €0.8 billion and €0.5 billion respectively to €0.2 billion and €0.3 billion, mostly in trade finance, driven by more stringent capital requirements and an effort by RBSH Group to improve average returns in a highly competitive environment. AFS government bonds increased by €0.1 billion, representing increased liquidity.

Other risks*

Business risk

Definition

Business risk is the risk that RBSH Group suffers losses as a result of adverse variances in its revenues, costs or both as a result of its business plan and strategy

Sources of risk

Business risk exists at all levels of the organisation and is generated at the transaction level. It is affected by other risks RBSH Group faces, which could contribute to any adverse changes in revenues or costs.

Governance

The Managing Board has ultimate responsibility for business risk. Responsibility for the day-to-day management of business risk lies primarily with the franchises with oversight by the Finance function.

Risk Management, measurement and mitigation

RBSH Group seeks to minimise its exposure to business risk, subject to its wider strategic objectives. Business risk is identified, measured and managed through planning cycles and performance management processes. Expected profiles for revenues and costs are determined, on a bottom-up basis, through plans reflecting expectations of the external environment and RBSH Group's strategic priorities. The Managing Board has ultimate responsibility for the impact of any volatility in revenues and costs on RBSH Group's performance.

Strategic risk

Definition

Strategic risk is the risk that RBSH Group will make inappropriate strategic choices or that there will be changes in the external environment to which the RNSH Group fails to adapt its strategies.

Sources of risk

Strategic risk arises from decisions that fail to reflect the operating environment, or which do not take adequate account of execution challenges. These include decisions related to RBSH Group products and services which have implications for profitability, risk, the customer base, and for business growth.

Failure to manage this risk could have a wide-ranging impact. It could lower revenues, profitability and returns to shareholders, and severely impair the RBSH Group's ability to meet other financial and non- financial objectives.

Governance

Responsibility for the management of the bank's strategic risks resides ultimately with the Managing Board of RBSH Group.

Risk management, measurement and mitigation

Strategic progress is monitored through regular performance reviews and deviations from the expected values are analysed to determine drivers. Also sensitivity analysis of the strategic plan is undertaken to assess the robustness of the plan under stressed conditions represented by a variety of scenarios.

Corporate governance

Introduction

RBSH Group maintains high corporate governance standards and its operations are guided by its code of conduct.

In order to achieve good corporate governance RBSH Group organises the business in a way that promotes first-class stewardship by the Managing Board and effective supervision by the Supervisory Board. Integrity, transparency and accountability are key elements of RBSH Group's corporate governance, as they are embedded in RBSH Group's business as a whole. These key elements ensure that the controls and oversight necessary for effective risk management, compliance with regulations, and accurate and complete disclosure of information to the market are effective.

The Supervisory Board of RBSH Group has prepared its annual report which is published on pages 81 to 83 of this report. The report provides an overview of its activities during 2014.

Corporate governance in the Netherlands

Dutch Corporate Governance Code

As a result of the delisting in 2008, RBS Holdings is no longer required to adhere to Dutch Corporate Governance Code. RBSH Group ensures proper corporate governance by focusing on the Dutch Banking Code (Code Banken) which caters for specific corporate governance rules for banks. However as the Dutch Corporate Governance Code is of great standing within the Netherlands, RBSH Group adheres where possible.

The Dutch Banking Code (Code Banken)

The Code Banken came into force on 1 January 2010 and was updated on 1 January 2015. It requires banks to either comply with the Code Banken or explain any deviation from it. The Code Banken is applicable to RBS N.V. as it has a banking licence issued under the Dutch Financial Supervision Act. A further explanation on compliance with the Code Banken, including an update on the latest version, is provided on pages 88 to 90 of this report.

Capital Requirements Directive III (CRD III)

CRD III contains certain provisions on capital requirements for trading portfolios and securitisations. It also contains principles on sound compensation policies. Each member state of the European Union has the requirement to implement the directive in their national legislation.

RBSH Group adheres fully to the principles of CRD III that were implemented in the Netherlands.

Capital Requirements Directive IV (CRD IV)

On 1 January 2014, CRD IV came into force in the European Union. The Directive contains several Corporate Governance related requirements, which were implemented in Dutch law on 1 August 2014. Specific provisions have been integrated into the operations of the Supervisory Board to comply with the specific requirements.

European Banking Authority (EBA) guidelines on internal governance

The EBA has issued guidelines relating to internal governance arrangements of credit institutions. These take into account weaknesses identified in the financial crisis and build upon the Committee of European Banking Supervisors (CEBS) Guidelines.

The EBA guidelines are implemented by the local competent authorities, which is the Dutch Central Bank. RBSH Group adheres to the implemented guidelines.

DNB Principles on Sound Remuneration

The principles of sound compensation policies were implemented by the publication of the Regulation by the Dutch Central Bank on Sound Compensation Policies for Financial Institutions, which came into effect on 1 January 2011 and was updated in 2014. RBSH Group adheres fully to these principles.

Further details of the remuneration policy can be found in the RBS Group's 2014 Annual Report on Form 20-F.

Corporate governance in the United States

As an SEC registered company, RBSH Group is subject to US securities laws, including the Sarbanes-Oxley Act, as well as certain corporate governance rules in connection with RBSH Group's listing of NYSE Alternext debt.

To meet the requirements of the Sarbanes-Oxley Act, RBSH Group established a Disclosure Committee that formalised the roles, tasks and disciplines that were already in place for ensuring the accuracy and completeness of information disclosed to the market.

Approval of Annual Report

The Managing Board approved the Annual Report at its meeting on 30 April 2015. The Supervisory Board approved the Annual Report at its meeting on 30 April 2015. RBSH Group has proposed to its Shareholders that it adopts the 2014 financial statements, as included in this Annual Report, and discharge the Managing Board and Supervisory Board in respect of their management and supervision respectively.

Boards and Committees

RBS Holdings and RBS N.V. are both companies with limited liability incorporated under the laws of the Netherlands. Both companies have a two-tier system of corporate governance; consisting of a Supervisory Board and a Managing Board. The day to day management of the companies vests with the Managing Board. The Supervisory Board provides oversight and advice to the Managing Board. The members of the Managing Board and Supervisory Board of RBS Holdings and RBS N.V. are the same.

Corporate governance

The report of the Supervisory Board

Dear Reader,

It is with great pleasure that I present to you the 2014 report of the Supervisory Board. This report provides you with an overview of the tasks and the activities of the Board during 2014.

In 2014 RBS Holdings continued to make good progress towards completing the transfers of businesses and assets to RBS plc. In addition to individual assets & liabilities, the RBSH Group business in Thailand transferred over to RBS plc.

The Supervisory Board has closely monitored the ongoing integration process in the past years and is pleased that the majority of its integration activities were completed successfully and on schedule by the end of 2013, clearing the road for the one-bank strategy of the RBS Group.

The Supervisory Board had oversight of the execution of this strategy, working together with the Managing Board through its meetings and conference calls. The Supervisory Board challenged the Managing Board on client focus, the timing and speed at which transfers were taking place and the potential impact on the bank's international network. The corporate strategy was regularly discussed at Supervisory Board meetings in 2014.

Succession planning for the Managing Board and senior management was another important subject addressed by the Supervisory Board through the execution of the integration activities. This has been evidenced by the appointment of Mr Idzard van Eeghen to the Managing Board as a replacement for Mr Jeroen Kremers.

The tasks of the Supervisory Board

The main task of the Supervisory Board is to supervise the Managing Board, as well as the general affairs of RBS Holdings and the enterprises connected to it. Furthermore, it assists and advises management and supervises the corporate governance structure of RBS Holdings.

In performing their duties, the members of the Supervisory Board are guided by the interests of RBSH Group and the businesses connected to it and shall take into account the relevant interests of RBSH Group's stakeholders. Certain powers are vested in the Supervisory Board, including the approval of certain resolutions by the Managing Board. A complete overview of the powers vested with the Supervisory Board can be found in the Rules governing the Supervisory Board's Principles and best Practices, which are published on the RBSH Group's website at www.rbs.nl. These rules are also applicable to the Supervisory Board of RBS N.V. and include provisions on Risk & Audit items that were previously discussed in the separate Risk & Audit Committee of the Supervisory Board. They now also include rules in relation to specific remuneration and nomination topics as prescribed by the implementation of CRD IV in the Netherlands.

Members of the Supervisory Board

The Supervisory Board is an independent corporate body. Members of the Supervisory Board are appointed at the General Meeting of Shareholders. For each vacant seat the Supervisory Board nominates one or more candidates. Under the Dutch Corporate Governance Code, which is mandatory for listed companies and which the RBSH Group adheres to where possible, all members of the Supervisory Board must be independent with the exception of not more than one person. RBSH Group is not compliant with that standard. RBSH Group has three Supervisory Board members who cannot be considered as independent within the scope of the Dutch Corporate Governance Code.

Also, the Chairman and Vice-Chairman of the Supervisory Board are appointed by the Supervisory Board from among its members.

On 28 May 2014, Mr Nathan Bostock stepped down as the Chairman of the Supervisory Board. Mr Ewen Stevenson, the RBS Group Chief Financial Officer was appointed as the replacement for Mr Bostock on 11 August 2014.

The Supervisory Board confirms that its current composition has the necessary experience, expertise and independence to ensure that its members are able to properly execute their duties. All appointments were made in accordance with the Supervisory Board profile resulting in the current composition of the board. The Supervisory Board is of the opinion that the addition of a female Supervisory Board member would be beneficial to its functioning and would then align with the RBSG Group policy on diversity and inclusion. The Supervisory Board will therefore strive to identify and nominate a female candidate on the company's Supervisory Board if a vacancy should arise.

Supervisory Board members are appointed for a term of four years and may be re-appointed after that term, with a maximum term of 12 years from the date of their first appointment. In addition, each member is required to resign at the first General Meeting of Shareholders after reaching the age of 70.

Candidates recommended for appointment or re-appointment to the Supervisory Board must meet the criteria of the membership profile, which are set out in the Rules Governing the Supervisory Board's Principles and Best Practices of RBS Holdings, which are also applicable to the Supervisory Board of RBS N.V.

Newly appointed Supervisory Board members undertake an induction programme. The new Supervisory Board members receive relevant documentation necessary for their role in RBSH Group and undertake a series of meetings with the management of RBSH Group to gain insight and understanding of RBSH Group and its enterprises. The programme is tailor-made and is adjusted to the specific needs of the new Supervisory Board member.

Corporate governance

In case of a (potential) conflict of interest of material significance between a member of the Supervisory Board and RBS Holdings, the Chairman of the Supervisory Board shall be notified. If the Chairman of the Supervisory Board has a (potential) conflict of interest of material significance, the Vice-Chairman is notified. The Supervisory Board member concerned will not take part in the assessment by the Supervisory Board where a conflict of interest exists. During 2014, no conflicts of interest have arisen.

Details of the remuneration of the Supervisory Board's can be found on page 152.

Activities of the Supervisory Board

As of the 4th quarter of 2013, the operations of the Risk & Audit Committee, a separate sub committee to the Supervisory Board, were integrated into the operations of the Supervisory Board. As a result, going forward the Supervisory Board does not have a separate sub-committee, but Risk and Audit topics are discussed on a regular basis and a report with deliberations and findings is prepared for each regular meeting. In addition, specific nomination and remuneration topics are discussed on a regular basis. The members of the Supervisory Board collectively have sufficient accounting and financial management expertise to understand RBSH Group's business, financial statements and risk profile.

The Supervisory Board works alongside RBS Group Remuneration Committee to ensure the implementation of a restrained and long-term remuneration policy which is aligned with the organisation's strategy and risk appetite, whilst also catering for an evermore globalising industry. The Supervisory Board extensively discussed remuneration at one of its meetings, highlighting the focus that this topic continues to receive in the organisation. In addition, specific Remuneration provisions have been included into the Rules of the Supervisory Board.

The Supervisory Board met on 8 occasions during 2014, either via a meeting in person or via telephone conference. On a few occasions the members were also asked to give their approval on a few matters via email procedure.

The assessment of the functioning of the Managing Board members and Supervisory Board members has taken place in the fourth quarter of 2014 /beginning of 2015.

The Chairman of the Supervisory Board and the Company Secretary prepared the agenda for the meetings of the Supervisory Board in close co-operation with the Chairman of the Managing Board.

The Supervisory Board reviewed and adopted the full year 2013 results at its meeting on 30 April 2014 and reviewed and adopted the half-year financial report 2014 on 28 August 2014. The Board reviewed in these meetings regulatory, control and audit issues, including Sarbanes-Oxley Act 404 compliance.

Throughout 2014, the Supervisory Board received regular updates on the proposed transfers of assets and liabilities to RBS plc. The financial performance of RBSH Group was extensively discussed during a number of Supervisory Board meetings, which were attended by members of the Managing Board who gave an explanation of the results. Also, relevant members discussed the findings of the internal and external auditors.

Comprehensive information provided by the Managing Board and reviewed by the Supervisory Board gave a clear picture of RBSH Group's risks, results, capital and liquidity position.

The strategy of RBSH Group was determined in conjunction with the divisional strategy of RBS Group and was adopted by the Supervisory Board during its meeting on 9 April 2010 and further updated in their meeting of 8 April 2011. Regular updates were provided during 2014.

The Shareholder reappointed Deloitte Accountants LLP as the external auditors of RBS Holdings for the statutory reporting of the 2014 financial year. All members of the Supervisory Board have complied with the requirement to attend meetings on a frequent basis.

Composition of the Supervisory Board

The members of the Supervisory Board as at 30 April 2015 are as follows:

		Date of first appointment	Date for re-election
Ewen Stevenson (Chairman)	(49, British/New Zealand, male)	11 August 2014	11 August 2018
Christopher Campbell (Vice-Chairman)	(56, British, male)	23 June 2011	23 June 2015
John Cummins	(53, British, male)	1 October 2013	1 October 2017

Mr Bostock resigned from the Supervisory Board on 28 May 2014.

Mr Stevenson was appointed to the Supervisory Board on 11 August 2014.

Mr Hepkema and Mr Rottinghuis resigned from the Supervisory Board with effect from 1 May 2014.

Furthermore, the Supervisory Board has determined that Mr Ewen Stevenson possesses the necessary relevant expertise in financial administration and accounting for listed companies and other large companies and therefore qualifies as a financial expert within the meaning of the Dutch Corporate Governance Code. It has also been determined that Mr Ewen Stevenson qualifies as an audit committee financial expert in accordance with Section 407 of the Sarbanes-Oxley Act.

Corporate governance

Ewen Stevenson - Chairman of the Supervisory Board

Mr Stevenson became Chief Financial Officer of The RBS Group in May 2014. He is a member of the RBS Group Board and the RBS Group Executive Committee.

Mr Stevenson was previously at Credit Suisse for 25 years where he was latterly co-Head of the EMEA Investment Banking Division and Co-Head of the Global Financial Institutions Group. Mr Stevenson has over 20 years of experience advising the banking sector while at Credit Suisse.

Mr Stevenson has a Bachelor of Commerce and Administration majoring in Accountancy and a Bachelor of Law from Victoria University of Wellington, New Zealand.

Christopher Campbell - Vice-Chairman of the Supervisory Board

Mr Campbell was appointed as a member of the Supervisory Board on 23 June 2011. Mr Campbell joined RBS Group in August 2005 as Deputy General Counsel and Director, Group Legal and became Group General Counsel in May 2010, in which role Mr Campbell had overall responsibility for advising the RBS Group Board and Executive Committee and for the provision of legal support to all of RBS Group's business globally.

Prior to joining RBS Group, Mr Campbell was a partner for 18 years in Scotland's largest law firm, Dundas & Wilson, and was Managing Partner from 1996 until he joined RBS Group in 2005. Mr Campbell retired from his executive role with RBS Group with effect from 31 March 2015 but continues to be associated with the bank as a non-executive director of Ulster Bank Limited and as a member of the Supervisory Board of RBS Holdings and RBS N.V..

John Cummins

In 2007, Mr Cummins joined RBS Group as Group Treasurer. As Group Treasurer, Mr Cummins manages the treasury function for RBS Group. He is responsible for the management of the RBS Group's capital, liquidity, and structural FX & interest rate risk and his role also includes responsibility for funding the RBS Group balance sheet, and the management of the RBS Group's capital and resources policies.

In his previous role Mr Cummins managed the Treasury function for Standard Life Assurance Group. He also filled the role of Finance Director, Standard Life Bank on an interim basis.

2006 - 2012 Mr Cummins was appointed Director of IFFIm, a AAA rated development institution. The IFFIm Board is responsible for the management of the International Finance Facility for Immunisation Company (IFFIm), registered as a UK Charity. IFFIm has raised over \$4 billion for vaccines in the developing world.

2013 - Mr Cummins was appointed a Trustee for the Sabin Foundation Europe, a UK-registered charity founded in 2011 to support vaccine research and development, advocacy efforts and treatment programs for vaccine - preventable and neglected tropical disease.

Mr Cummins holds an MA in Modern History from Oxford University and an MBA from Bradford University. He completed the Corporate Finance Course at London Business School and attended the Risk Management in Banking programme at INSEAD.

Ewen Stevenson

Chairman of the Supervisory Board

Corporate governance

The report of the Managing Board

The members of the Managing Board of RBS Holdings collectively manage RBS Holdings and are responsible for the general affairs of RBS Holdings business and general affairs of all its subsidiaries. The members are appointed by the General Meeting of Shareholders.

The Supervisory Board of RBS Holdings nominates one or more candidates for each vacant seat. If the Supervisory Board nominates two or more candidates for a vacant seat in the Managing Board, the nomination list is binding. The members of the Managing Board are accountable both collectively and individually for all decisions taken by the Managing Board.

The Chairman of the Managing Board leads the Managing Board in its overall management of RBSH Group to achieve its performance goals and ambitions. The Chairman of the Managing Board is the main point of liaison with the Supervisory Board. The Chief Financial Officer is responsible for the financial affairs of RBSH Group, and the Chief Risk Officer is responsible for RBSH Group's risk management and operational risk control. Alongside their overall corporate responsibilities, the members of the Managing Board are responsible for the management of the segments and control and support functions. The Managing Board has delegated certain tasks to a number of Managing Board committees which are described on pages 85 and 86 of this report.

Composition of the Managing Board

The members of the Managing Board as at 30 April 2015 are as follows:

		Date of first appointment	Date for re-election
Jan de Ruiter (Chairman)	(53, Dutch, male)	1 April 2010	1 April 2018
Cornelis Visscher	(49, Dutch, male)	18 July 2013	18 July 2017
Michael Geslak	(51, American, male)	1 April 2010	1 April 2018
Idzard van Eeghen	(54, Dutch, male)	18 June 2014	18 June 2018

On 1 April 2014, Mr Jeroen Kremers stepped down from the Managing Board. On 18 June 2014, Mr Idzard van Eeghen was appointed to the Managing Board.

Corporate governance

Jan de Ruiter

Chairman Managing Board RBS Holdings - RBS Group Netherlands Country Executive

Mr de Ruiter started his career at the Dutch Credit Insurance (NCM) in 1984 and moved to ABN Bank in 1987.

During his 21 years with ABN AMRO, he held various positions in the wholesale division of the bank. From 1987 until 1993 he was a team member of the Institutional Equity Sales team in Amsterdam and from 1993 until 1998 Head of the European Equity sales team, based in London. In 1998 he became the Head of Equity Capital Markets for the Netherlands (Managing Director ABN AMRO Rothschild). Mr de Ruiter was appointed Corporate Managing Director of ABN AMRO in 2000. In 2003 he became one of the two joint CEO's of ABN AMRO Rothschild. In 2004 he also became responsible for the global Merger & Acquisitions franchise of ABN AMRO. He held both positions until the end of 2007. At the beginning of 2008, following the successful consortium bid for ABN AMRO, he became the country executive of RBS N.V. in the Netherlands. Mr de Ruiter graduated from the HEAO in Utrecht in 1983 (Economics/Law) and also holds an MBA degree from Webster University.

Cornelis Visscher

Chief Financial Officer, RBS Holdings - RBS Group Netherlands Chief Financial Officer

Mr Visscher graduated from the Vrije Universiteit in Amsterdam with a degree in Business Economics, specialised in Financial Accounting and Management Accounting. He started his career at ABN AMRO in 1988, where, after several functions in Divisional and Group Finance, he ultimately became responsible for the delivery of ABN AMRO's Group Management Information. Following the acquisition of (parts of) ABN AMRO by the RBS Group, Mr Visscher became the head of Group Consolidation, in which he was responsible for the split of the ABN Amro accounts between the Consortium members. Furthermore, in 2011 Mr Visscher was seconded to Edinburgh where he became the Head of Financial Control for the Retail & Wealth, Corporate and Business Services Divisions of RBS Group. In this role, he was amongst others responsible for the Offshore programme. As of 2013 he is the CFO for RBS Holdings and a member of the RBS Holdings Managing Board. In addition to this role, he serves as CFO for RBS Netherlands Branch and in this role is part of the Netherlands Country Management team.

Michael Geslak

Chief Administrative Officer - RBS N.V.

Mr Geslak joined ABN AMRO in New York in 1988 as an accountant, in 1992 he formed the Market Risk function in New York, and after moving to Chicago in 1993 became Head of Market Risk for North America. In 1995 he became Head of Investment Banking Operations and Product Control in Chicago, which was later expanded to cover all Investment Banking Operations for North America. In 2000 he was promoted to Chief Administrative Officer for Wholesale Banking in the Americas.

Mr Geslak then moved to London as Global Chief Information Officer for ABN AMRO Wholesale Banking and managed the provision of all technology to the Global Markets and Global Transaction Services businesses. In 2006 he became Head of Services for Global Markets and EMEA. From 2009 to 2012 he became the RBS Group COO for EMEA. His current roles are CAO and Managing Board member for RBS Holdings and Business Services Business Partner for Non-Core and APS.

In addition to these responsibilities, for the past two years Mr Geslak has been leading the programme to de-risk RBS N.V. by transferring businesses to RBS plc.

Idzard van Eeghen

Chief Risk Officer, RBS N.V.

Mr van Eeghen started his career at AMRO Bank in 1984, which later merged into ABN AMRO Bank. From 1988 until 1996 he was corporate relationship manager and senior relationship manager in Eindhoven after which he became senior advisor structured finance in the Wholesale/Investment Bank division. In 1999 he joined the risk management division in Amsterdam where he was respectively Project Manager Regulatory Capital, Head of Credit Ratings & Credit Policies, Head of Credit Ratings & Portfolio Management, and Head of Integrated Risk & Country Risk. After the acquisition of ABN AMRO Bank in 2007 he was a member of the Risk Management Team overseeing the transition of the bank. In this period he was also seconded to Fortis Central Risk Management as Director Risk Performance in Brussels.

In 2010 Mr van Eeghen joined RBS Holdings to establish the risk office function of RBS Holdings, which he subsequently headed. In addition, he led the Economic Capital program of RBS Group and was involved with a number of other projects in RBS Group Risk Management. In 2014 Mr. van Eeghen became Chief Risk Officer and member of the Managing Board of RBS Holdings.

Mr. van Eeghen holds a Master's degree in Economics from the State University of Groningen and a Master's degree in Finance from TIAS Business school which is associated with the Tilburg University. Since 2014 he is Executive Fellow of the Duisenberg School of Finance. Mr. van Eeghen is co-author of the book 'Economic Capital: How it Works and What Every Manager Needs to Know' published by Elsevier.

Information, induction and professional development

As part of the Code Banken, both the Managing Board and the Supervisory Board participate in a programme of Life Long Learning. The programme consists of a modular approach, addressing matters that are mentioned in the Code Banken, including relevant developments in the financial sector in general and the banking sector in specific, corporate governance in general the duty of care towards clients, integrity, risk management, financial reporting and audits. Subject matter experts are invited, both from within RBSH Group and from outside RBSH Group, to deliver education modules on the above mentioned matters.

Performance evaluation

The members of the Managing Board participate in the annual performance management process of RBS Group.

Managing Board committees

In order to provide effective oversight and leadership, the Managing Board has three sub-committees, the Risk & Control committee (RCC), the Asset & Liability management Committee (ALCo) and the Disclosure Committee.

Corporate governance

Risk & Control Committee (RCC)

The Risk & Control Committee (RCC) oversees the risk framework within RBSH Group, monitors the actual risk profile and advises the Managing Board on these matters. Its scope is, amongst others, credit, market, operational and regulatory risk within RBSH Group.

Asset & Liability management Committee (ALCo)

The Managing Board has delegated to the ALCo the responsibility for the management of capital, liquidity, interest rate risk and foreign exchange risk. This includes responsibility for reviewing, approving and allocating balance sheet, capital, liquidity and funding limits.

Disclosure Committee

The Disclosure Committee advises and assists the Managing Board in fulfilling its responsibilities for overseeing the accuracy and timeliness of public disclosures made by RBSH Group. This inter alia includes advising the Managing Board on the disclosure of financial information.

Code of conduct

The code of conduct applies to everyone who works for RBS Group. It promotes honest and ethical conduct, including the handling of actual or apparent conflicts of interest between personal and professional relationships. RBSH Group recognises that personal conduct, business integrity and RBSH Group's security are crucial, and the code of conduct serves to inform those who work for us of RBSH Group's expectations of their behaviour and practices.

The code of conduct is available on RBS Group's website www.rbs.com.

Sustainability

Sustainability at RBS Group means building our business around long term thinking and support for our customers and the communities in which they live. Our core responsibility is to obey the law and to ensure that our business is built on safe and secure financial foundations, and we have worked hard in the years since the financial crisis to achieve this position. This underpins everything that RBS Group does and enables people to run their daily lives and businesses. Our position as a provider of credit supports economic growth and brings wider benefits to society.

But our ambition is to go further, to shape the world around us in a positive way. We recognise that we still have a long way to go achieve this position across our business. Sustainability is therefore not just about the many responsibilities and obligations that RBS Group has, but about taking leadership on a broad range of issues that are important to our stakeholders.

The RBS Group Sustainable Banking Committee is responsible for overseeing and challenging how management is addressing sustainable banking and reputation issues, considering the long term interests of all stakeholder groups.

Relations with shareholders

Rights of shareholders

Any resolution to amend the Articles of Association of RBS Holdings may only be passed by the General Meeting of Shareholders following a proposal by the Managing Board which has been approved by the Supervisory Board. A copy of the proposal containing the literal text of the proposed amendments shall be made available for inspection by the holders of shares of RBS Holdings at the offices of RBS Holdings and at the offices stated in the convocation to the meeting, from the day of convocation to the end of the Meeting. Each Shareholder may obtain a full copy of the proposal free of charge.

Meetings of shareholders and convocation

The general meetings of shareholders shall be held in Amsterdam, or in The Hague, Rotterdam, Utrecht or Haarlemmermeer (Schiphol). The Annual General Meeting of Shareholders must be held within six months of the end of each financial year. In addition, general meetings of shareholders shall be held as frequently as deemed necessary by the Managing Board or the Supervisory Board and when required by law or by the Articles of Association. General meetings of shareholders shall be convened by the Managing Board or the Supervisory Board, without prejudice to the provisions of Sections 110, 111 and 112 of Book 2 of the Netherlands Civil Code. Convocation shall take place not later than on the fifteenth day prior to the day of the meeting. Convocation shall state the items to be discussed or alternatively notice shall be given that such items may be inspected at the company's offices. Proposals to amend the Articles of Association or proposals relating to a reduction of the company's capital shall always be included in the actual convocation.

Employees

As at 31 December 2014, RBSH Group employed approximately 1,700 employees (full-time equivalent basis) throughout the world. Details of employee related costs are included in Note 3 on the accounts.

Leadership

Developing great leaders with the capability to deliver our ambition to be number one for customer service, trust and advocacy is a key priority, aligned to our People and Leadership Standards. In 2014 we rolled out Team Effectiveness sessions for new executive teams to help them role model our values and lead the transition to a new RBS Group.

Employee engagement

For RBS Group, building an engaged, healthy and inclusive workforce is crucial. Every year since 1999, through the Our View survey, people in all our businesses have shared their thoughts about what it's like to work at RBS Group. The survey enables our people leaders to monitor levels of engagement and work with their teams to make improvements to the working environment. It also provides a mechanism for RBS Group to track employee perception of our culture and the progress we're making.

Corporate governance

Living our values

The ways that we recruit, promote, reward, and manage our people are all aligned to our values, and this coherent approach is making a difference within the organisation – with more people (year on year) believing our values are making a difference to the way we work.

How we behave forms the character of our company and dictates how others see us. RBS Group's code of conduct, Our Code, reflects our values and applies to everyone who works here. It is supported by the YES Check: a simple decision-making framework to help our people translate Our Code into their day-to-day roles. The YES check has been designed to meet the Financial Conduct Authority's standard of conduct and is underpinned by ethical principles.

Our Code lets everyone know what to expect of each other, what to do when unsure of a decision, and where to go for advice when needed. It's available at [rbs.com>about us>our values](http://rbs.com/about-us/our-values), or without charge, upon request, by contacting Corporate Governance and Secretariat at the telephone number listed on page 202.

Customer performance

Our approach to performance management allows us to provide clarity for our people about how their individual contribution links to our ambition, reward the behaviour that supports our values, and hold individuals to account for behaviour and performance that does not. In 2014 we completed alignment of our approach to performance management across RBS Group, so that in 2015 there is consistent bank-wide use of our balanced scorecard, People standards, Leadership standards, and online system.

Simple organisation

RBS Group is making steady progress towards building a smaller, simpler organisation. In 2014, we defined clear principles and practices around how the organisation would work, and new role accountabilities for the top 150 roles across the RBS Group, as part of redesigning our operating model.

We've moved from seven divisions to three customer franchises, redesigning our supporting functions and services to remove duplication and unnecessary management layers. In addition to supporting our strategic direction, this work has strengthened accountabilities across RBS Group, with robust governance in place to ensure future organisation designs are in line with these principles, positioning us to respond to ongoing regulatory requirements.

Employee consultation

RBS Group recognises employee representatives such as trade unions and work councils in a number of businesses and countries. Our European Employee Council provides an opportunity for elected representatives and management to discuss developments in RBS Group's European operations. Discussions have continued to take place with employee representatives where appropriate on the progress of our strategic plans.

Employee learning and development

RBS Group maintains a strong commitment to providing all our people with the opportunity to grow through learning and development, which in turn helps to achieve business objectives and drive excellent customer service.

Supporting the professionalisation of our front line staff, all of our customer-facing employees are aware of the professional standards expected of them, and as at the end of 2014, 86% have completed related professional development programmes, giving colleagues the skills they need to do their job and serve customers well. Building the capability of our people is also crucial to ensure effective compliance behaviour. RBS Group has mandatory training modules for all employees to improve their understanding of the processes and controls required to properly

manage key risks.

Diversity and inclusion

RBS Group's ambition is to be number one for customer service, trust and advocacy in every one of our chosen business areas by 2020, supported by a people commitment to make RBS Group a great place to work. Valuing difference is therefore essential for our customers and colleagues. Our inclusion policy standard applies to all our people globally; and our strategy for diversity and inclusion sits with the RBS Group Board and Executive Committee.

Our approach during 2014/15 focuses on building inclusion into all stages of the employee lifecycle. In 2014 we started rolling out bank-wide unconscious bias learning for all employees, which will continue across 2015. We've introduced a gender target to increase the number of women in senior roles across RBS Group. Also we continue to support our employee-led networks, with membership across RBS Group at over 15,000 people.

This year RBS Group has been recognised for its work on Equality, Diversity and Inclusion by retaining our Platinum ranking from Opportunity Now (gender) for the second year; increasing our ranking from Silver to Gold for Race for Opportunity (race); retaining a position in the Times Top 50 Employers for Women for the eighth consecutive year; and improving upon our ranking in the Stonewall Workplace Equality Index (LGBT).

Wellbeing

Ensuring and supporting the wellbeing of our people is an important responsibility for RBS Group. A wide range of health benefits and services is in place to help them maintain good physical and psychological health, and support them if they do become unwell, including Lifematters, RBS Group's Employee Assistance Programme. We continue to enhance and promote these services, targeting those issues that we know affect our people's ability to bring the best of themselves to work. In 2014, Lifematters Online activity improved significantly through promotion via road shows, wellbeing fairs, and internal communications; and the popularity of the Lifematters App, which was launched in late 2013, continued to grow. In 2014 RBS Group also signed up to Time to Change: the UK's biggest programme to challenge mental health stigma.

Corporate governance

The Dutch Banking Code (Code Banken)

Introduction

The Code Banken was drawn up by the Netherlands Bankers' Association (NVB) in response to the report entitled 'Restoring Trust' (Naar herstel van vertrouwen), which was published by the Advisory Committee on the Future of Banks (Adviescommissie Toekomst Banken) on 7 April 2009. The recommendations of the Advisory Committee's report have been used as the basis for this Code Banken. The Code Banken is mandatory for RBSH Group as stated in Book 2 of the Civil Code as from 1 January 2010. An updated version of the Code Banken came into force on the 1 of January 2015.

The Code Banken offers specific provisions, but underlying these provisions, its aim is to instil learning in the banking sector following the financial crisis. Drawing lessons and implementing change with the aim to restore trust among all our stakeholders, clients, staff, investors and society at large. RBS Group, including RBSH Group has undergone and continues to undergo profound change following the crisis and is committed to high standards of corporate governance, business integrity and professionalism in all its activities.

A review is ongoing of the new Code Banken to determine if there are additional steps to be taken, which is expected not to be the case. This will be reported in the 2015 Annual Report.

Corporate Governance codes and the global footprint of RBS Group

RBSH Group is ultimately owned by RBS Group. When implementing the Code Banken, the Managing Board and Supervisory Board of RBSH Group will take into account the effects of similar codes of conduct implemented in the RBS Group with the aim to align all businesses with RBS Group.

Clients First

RBSH Group is aware of the fact that its long term success fully depends on how successful RBSH Group is in servicing its clients. To that extent, RBSH Group has taken additional measures to further embed 'a client led culture' in the organisation. Over the past few years certain themes in this area have been fleshed out in detail, resulting in the 'Customer Charter' and the 'Treating Customers Fairly Policy'. The Customer Charter describes 14 'customer commitments' divided into the following four categories:

- Make banking easy
- Help when you need us
- Support the communities in which we work
- Listen to you

More information about the Customer Charter can be found on the website: www.rbs.com.

In the Netherlands, RBSH Group primarily serves wholesale customers. The products and services which RBSH Group provides to these customers have been tailored accordingly and the mentioned Treating Customers Fairly Policy is applicable, where appropriate. With respect to the products and services have been offered to retail investors, we use methods including market research to gauge the requirements and opinions of (potential) customers. And as described on page 32 of this report, RBSH Group fully takes into account the yes-check to determine the suitability of a product being offered to clients.

Compliance with the Code Banken

RBSH Group considers the Code Banken as an important yardstick for the way banks draw lessons from the crisis. RBSH Group takes account of all relevant remuneration regulatory regimes, including the Code Banken in designing and implementing its remuneration policy as well as RBSH Group's corporate governance structure.

Supervisory Board

The required expertise and experience are well embedded in the Supervisory Board providing for an independent board with a diverse composition. The board consists of executives of RBS Group with broad banking experience. A clearly defined process for the engagement and recruitment of a Supervisory Board member has been established. If a vacancy for a new member exists, a new member is sought based on an established Supervisory Board profile to ensure that the knowledge and expertise obtained when filling the vacancy is fully complementing the composition of the board.

If the position of Chairman of the Supervisory Board became vacant, a separate individual profile would be drawn up based on an established Chairman's profile to ensure alignment with the specific socio-economic and political culture and the social environment of the bank's main markets.

All Supervisory Board members have committed themselves to fulfil their responsibilities as board members to the best of their ability. Their attendance at meetings is recorded. The board furthermore operates according to a set of rules governing the Supervisory Board's principles and best practices. These have been agreed by all board members and are published on the internet site of the bank, www.rbs.nl. The remuneration received as Supervisory Board members is not dependent on RBSH Group's results.

A programme covering aspects as stated in the Code Banken is ongoing to accommodate for life long learning of Supervisory Board members and such programme is assessed on an annual basis.

Furthermore the functioning of the Supervisory Board, including its life long learning programme, has been assessed by an independent party. Their conclusion was that the Supervisory Board members discharge their roles and responsibilities in a satisfying way. The independent assessment is in accordance with the Code Banken which requires such independent assessment at least once every three years. As a result, the next assessment will take place in 2015.

In line with the requirement of the Code Banken, Supervisory Board members sign a moral and ethical declaration. Each Board member of RBS Holdings has signed such declaration.

Managing Board

The composition of the Managing Board of RBSH Group ensures that all business areas and all control and support functions are well represented in the board. The board comprises a Chairman, also responsible for Corporate & Institutional Banking, a Chief Risk Officer (CRO), a Chief Financial Officer (CFO) and a Chief Administrative Officer (CAO). To further clarify the specifics of each role on the board and to ensure adherence to agreements made on procedure and governance, a set of rules governing the Managing Board's principles and best practices has been agreed.

Corporate governance

A programme covering aspects as stated in the Code Banken is ongoing to accommodate for life long learning of Managing Board members and such programme has been assessed on an annual basis.

The Managing Board will continuously ensure a prudent risk appetite, based on the risk appetite framework approved by the Supervisory Board. The Risk appetite framework shall be approved by the Supervisory Board at least once a year and is actively monitored during the year. Any material changes in the interim shall also require the Supervisory Board's approval. The Managing Board takes the interests of all stakeholders (e.g. employees, clients, shareholders) into account in their decision making. The Managing Board recognises that duty of care for clients is an important component in doing business.

In line with the requirement of the Code Banken, Managing Board members sign a moral and ethical declaration. Each Board member of RBS Holdings has signed such declaration.

The principles in the moral and ethical declaration are incorporated into the RBS Group's code of conduct which is issued to all new employees joining RBSH Group.

Risk Management

The Managing Board has arranged Risk Management in an adequate manner in order to ensure the Managing Board is aware in good time of any material risks run by the bank and to enable the Managing Board to manage these risks properly. The Chief Risk Officer of RBS Holdings is a member of the Managing Board.

The Managing Board, through its sub committees, the Risk & Control Committee (RCC) and the Asset & Liability Management Committee (ALCo) takes any decision that is of material significance to the risk profile, the capital position or the liquidity impact.

Since the 4th quarter of 2013, the former operations of the Risk & Audit Committee have been integrated into the Supervisory Board. Specific provisions have been included in the Rules for the Supervisory Board.

Audit

RBSH Group has a New Product Approval Process in place to ensure that all products are launched only after careful consideration of the risks and any other relevant factor applicable to such product. Internal Audit checks RBSH Group New Product Approval Process on design and effectiveness at least once per annum and reports its findings to both the Managing Board and Supervisory Board.

To ensure the function's independence, the Head of RBS Holdings Internal Audit reports into the Chairman of the Managing Board and the Chairman of the Supervisory Board. RBS Holdings Internal Audit also reports its opinion and findings on the quality of the control framework, the system of governance and the risk management of the bank to the Supervisory Board on a bi-annual basis and provides the Supervisory Board with their audit review in the remaining quarters of the year. RBS Holdings Internal Audit furthermore presents their annual audit plan to the Supervisory Board. The Managing Board shall ensure that a systemic audit is conducted of the risks managed in relation to the business activities of the bank.

The external auditors are invited to share their findings and opinion concerning the quality and effectiveness of the system of governance, risk management and the banks' control procedures with the Supervisory Board on a quarterly basis. The external auditors present the annual audit plan to the Supervisory Board and both RBS Holdings Internal Audit and the external auditors take part in a tri-partite meeting with DNB (from November 2014, ECB as the lead

regulator also partake in the meeting) to share their audit plans, analysis and findings at least once per annum. There is a clear escalation process by which the external auditors can raise, with management, any significant concerns.

Remuneration Policy

The remuneration policy for RBS Group, which is also applicable to RBSH Group supports the RBS Group's business strategy and is designed to:

- attract, retain, motivate and reward high calibre employees to deliver superior long-term business performance; and
- ensure that RBSH Group's metrics, reward structures and governance processes as a whole provide coverage of the key risks in an appropriate way.

The Supervisory Board is responsible for the implementation and evaluation of the remuneration policy adopted.

All members of the Managing Board are remunerated through RBS plc. The full year remuneration of the Managing Board members in office as at 31 December 2014 continues to comply with the Code Banken.

RBS Group has had claw back provisions in place since 2009. This allows the Remuneration Committee to retrospectively limit any compensation at the time of vesting if it considers that the performance factors on which reward decisions were based have later turned out not to reflect the corresponding performance in the longer term.

The intention is to allow RBS Group to adjust historic remuneration for unforeseen issues arising during the deferral period, particularly those that do not easily lend themselves to quantitative measurement. Further details on the remuneration arrangements for RBS N.V. can be found in note 31 to this Report and Accounts.

Summary Code Banken

All of the principles in the Code Banken are adhered to by RBSH Group, except for one item. The Code Banken has a 'comply' or 'explain' requirement. If a bank is (partially) not compliant, the bank will have to explain the reason for non-compliance in its Annual Report. Sanctions or penalties are not part of the Code Banken. Compliance with the Code Banken is monitored annually by an independent monitoring committee, appointed by the NVB in close consultation with the Minister of Finance. There is no penalty, financial or otherwise, associated with RBSH Group's non-compliance with the principles.

Under the Code Banken, there is the requirement for shares granted to Managing Board members without financial consideration to be retained for at least five years or to the end of employment, whichever is sooner. RBSH Group is part of RBS Group and therefore adheres to the global RBS Group remuneration framework and policy which is compliant with UK regulatory requirements and the Capital Requirements Directive III and IV as implemented in both the UK and the Netherlands.

Corporate governance

Under the RBS Group-wide deferral arrangements, a significant proportion of annual bonus awards for employees deemed to be Material Risk Takers (MRTs) under regulatory requirements are deferred over a minimum three year period. RBS Group also provides long-term incentives which are designed to link reward with the long-term success of RBSH Group and recognise the responsibility participants have in driving its future success and delivering value for shareholders. Long-term incentive awards are structured as performance-vesting shares, with performance measured over three years and vesting taking place in equal tranches in years four and five.

In line with the requirements of the UK Prudential Regulation Authority and Financial Conduct Authority Remuneration Code, variable pay awards made to MRTs are subject to malus and clawback provisions and an appropriate retention period will also apply post vesting.

Under the RBS Group-wide deferral arrangements a significant proportion of annual incentive awards for the more senior employees are deferred over a three year period. In line with the requirements of the PRA remuneration Code, a proportion of deferred remuneration is subject to an appropriate retention period.

RBS Group also provides long-term incentives which are designed to link reward with the long-term success of RBSH Group and recognise the responsibility participants have in driving its future success and delivering value for shareholders. Long-term incentive awards are structured as performance-vesting shares. For the most senior roles, vesting will be based partly on divisional or functional performance and partly on performance across RBS Group.

For details of remuneration of the Managing Board and Supervisory Board see Note 31 to the Financial Statements.

Corporate governance

Management's report on internal control over financial reporting

Internal Control

The Managing Board is responsible for RBSH Group's system of internal control that is designed to facilitate effective and efficient operations and to ensure the quality of internal and external reporting and compliance with applicable laws and regulations. In devising internal controls, RBSH Group has regard to the nature and extent of the risk, the likelihood of it crystallising and the cost of controls. A system of internal control is designed to manage, but not eliminate, the risk of failure to achieve business objectives and can only provide reasonable, and not absolute, assurance against the risk of material misstatement, fraud or losses.

Management's Report on Internal Control over Financial Reporting

The Managing Board is responsible for establishing and maintaining adequate internal control over financial reporting for RBSH Group.

RBSH Group's internal control over financial reporting is a component of an overall system of internal control. RBSH Group's internal control over financial reporting is a process designed to provide reasonable assurance regarding the preparation, reliability and fair presentation of financial statements for external purposes in accordance with International Financial Reporting Standards ('IFRS') as adopted by the EU-members and issued by the International Accounting Standards Board ('IASB') and it includes:

- Policies and procedures that relate to the maintenance of records that, in reasonable detail, fairly and accurately reflect the transactions and disposition of assets
- Controls providing reasonable assurance that transactions are recorded as necessary to permit the preparation of financial statements in accordance with IFRS, and that receipts and expenditures are being made only as authorised by management.
- Controls providing reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use or disposition of assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. In addition, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or because the degree of compliance with policies or procedures may deteriorate.

Management assessed the effectiveness of RBSH Group's internal control over financial reporting as of 31 December 2014 based on the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission in the 2013 publication of 'Internal Control – Integrated Framework'.

Based on its assessment, management believes that, as of 31 December 2014, RBSH Group's internal control over financial reporting is effective.

Disclosure controls and procedures

Management, including our Chairman of the Managing Board and our Chief Financial Officer, conducted an evaluation of the effectiveness and design of the disclosure controls and procedures (as such term is defined in Exchange Act Rule 13a-15(e)). Based on this evaluation, our Chairman of the Managing Board and our Chief Financial Officer concluded that our disclosure controls and procedures were effective as of the end of the period

covered by this annual report.

Changes in Internal Controls

There was no change in RBSH Group's internal control over financial reporting that occurred during the period covered by this report that has materially affected, or is reasonably likely to materially affect, RBSH Group's internal control over financial reporting.

Independent verification

The independent registered public accounting firm are not required to provide an opinion on the effectiveness of internal control over financial reporting for RBSH Group. This is because the company qualifies as a 'non-accelerated filer' as defined by the US Securities & Exchange Commission. Following a change to US legislation during 2010, such companies are permanently exempted from an independent audit over internal controls over financial reporting by the independent registered public accounting firm.

Jan de Ruiter

Chairman of the Managing Board

Cornelis Visscher

Chief Financial Officer

Amsterdam, 30 April 2015

Consolidated income statement for the year ended 31 December 2014

Note:

(1) 2012 and 2013 relates to the transfer of subsidiaries and businesses to RBSG and RBS plc during the year.

The accompanying notes on pages 106 to 161, the accounting policies on pages 97 to 105 and the audited sections of the Financial review: Capital and risk management on pages 25 to 75 form an integral part of these financial statements.

Accounting policies

1. Corporate information

RBS Holdings N.V. (the company) is a public limited liability company, incorporated under Dutch law on 30 May 1990 and registered at Gustav Mahlerlaan 350, 1082 ME Amsterdam, the Netherlands. RBSH Group offers a wide range of banking products and financial services principally in Europe and Asia.

The company is wholly owned by RFS Holdings B.V., itself 97.7% owned by The Royal Bank of Scotland Group plc (RBSG). RBSG is incorporated in the UK and registered at 36 St. Andrew Square, Edinburgh, Scotland. RBS Group is the ultimate parent company of RBS Holdings N.V. The consolidated financial statements of RBS Holdings N.V. are included in the consolidated financial statements of RBS Group.

The consolidated financial statements of RBSH Group for the year ended 31 December 2014 incorporate financial information of the company, its controlled entities and interests in associates and joint ventures. The consolidated financial statements were signed and authorised for issue by the Managing Board on 30 April 2015 and by the Supervisory Board on 30 April 2015. The right to request an amendment of the financial statements is embedded in the Netherlands Civil Code. Interested parties have the right to ask the Enterprise Chamber of the Amsterdam Court of Appeal for an amendment of the financial statements.

2. Presentation of accounts

The Managing Board, having made such enquiries as they considered appropriate, including a review of RBSH Group's forecasts, projections and other relevant evidence regarding the continuing availability of sufficient resources from the RBS Group, have prepared the financial statements on a going concern basis.

As announced on 19 April 2011, RBS Group is committed to providing the necessary support to ensure that RBS N.V. continues to meet its commitments.

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and interpretations as issued by the IFRS Interpretations Committee (IFRIC) of the IASB and IFRS as adopted by the European Union (EU) (together IFRS). The EU has not adopted the complete text of IAS 39 'Financial Instruments: Recognition and Measurement', it has relaxed some of the standard's hedging requirements.

RBSH Group has not taken advantage of this relaxation and has adopted IAS 39 as issued by the IASB: RBSH Group's financial statements are prepared in accordance with IFRS as issued by the IASB.

The RBSH Group adopted a number of new and revised IFRSs effective 1 January 2014:

'Offsetting Financial Assets and Financial Liabilities (Amendments to IAS 32)' adds application guidance to IAS 32 to address inconsistencies identified in the application of the standard's criteria for offsetting financial assets and financial liabilities.

'Investment Entities (amendments to IFRS 10, IFRS 12 and IAS 27)' applies to investment entities; such entities should account for their subsidiaries (other than those that provide services related to the entity's investment activities) at fair value through profit or loss.

IFRIC 21 'Levies' provides guidance on accounting for levies payable to public authorities prohibiting recognition of a liability before the trigger point is met.

IAS 36 'Recoverable Amount Disclosures for Non-Financial Assets (Amendments to IAS 36)' aligns the recoverable amount disclosure requirements in IAS 36 with IASB's original intentions.

IAS 39 'Novation of Derivatives and Continuation of Hedge Accounting (Amendments to IAS 39)' provides relief from discontinuing hedge accounting on novation of a derivative designated as a hedging instrument.

The implementation of these requirements has not had a material effect on RBSH Group's accounts.

The accounts are prepared on a historical cost basis of measurement except for certain financial instruments that are measured at fair value as described in Accounting Policies 11, 13 and 15. The company's financial statements and RBSH Group's consolidated financial statements are presented in euro which is the functional currency of the company.

3. Basis of consolidation

The consolidated financial statements incorporate the financial statements of the company and entities (including certain structured entities) that are controlled by RBSH Group. The RBSH Group controls another entity (a subsidiary) when it is exposed, or has rights, to variable returns from its involvement with that entity and has the ability to affect those returns through its power over the other entity; power generally arises from holding a majority of voting rights. On acquisition of a subsidiary, its identifiable assets, liabilities and contingent liabilities are included in the consolidated accounts at their fair value. A subsidiary is included in the consolidated financial statements from the date it is controlled by RBSH Group until the date RBSH Group ceases to control it through a sale or a significant change in circumstances. Changes in RBSH Group's interest in a subsidiary that do not result in RBSH Group ceasing to control that subsidiary are accounted for as equity transactions.

All intergroup balances, transactions, income and expenses are eliminated on consolidation. The consolidated accounts are prepared under uniform accounting policies.

Accounting policies

4. Revenue recognition

Interest income on financial assets that are classified as loans and receivables, available-for-sale or held-to-maturity and interest expense on financial liabilities other than those measured at fair value are determined using the effective interest method. The effective interest method is a method of calculating the amortised cost of a financial asset or financial liability (or group of financial assets or liabilities) and of allocating the interest income or interest expense over the expected life of the asset or liability. The effective interest rate is the rate that exactly discounts estimated future cash flows to the instrument's initial carrying amount. Calculation of the effective interest rate takes into account fees payable or receivable that are an integral part of the instrument's yield, premiums or discounts on acquisition or issue, early redemption fees and transaction costs. All contractual terms of a financial instrument are considered when estimating future cash flows.

Financial assets and financial liabilities held-for-trading or designated as at fair value through profit or loss are recorded at fair value. Changes in fair value are recognised in profit or loss.

Commitment and utilisation fees are determined as a percentage of the outstanding facility. If it is unlikely that a specific lending arrangement will be entered into, such fees are taken to profit or loss over the life of the facility otherwise they are deferred and included in the effective interest rate on the advance.

Fees in respect of services are recognised as the right to consideration accrues through the provision of the service to the customer. The arrangements are generally contractual and the cost of providing the service is incurred as the service is rendered. The price is usually fixed and always determinable. The application of this policy to a significant fee type is outlined below.

Investment management fees - fees charged for managing investments are recognised as revenue as the services are provided. Incremental costs that are directly attributable to securing an investment management contract are deferred and charged as expense as the related revenue is recognised.

5. Assets held for sale and discontinued operations

A non-current asset (or disposal group) is classified as held for sale if RBSH Group will recover its carrying amount principally through a sale transaction rather than through continuing use. A non-current asset (or disposal group) classified as held for sale is measured at the lower of its carrying amount and fair value less costs to sell. If the asset (or disposal group) is acquired as part of a business combination, it is initially measured at fair value less costs to sell. Assets and liabilities of disposal groups classified as held for sale and non-current assets classified as held for sale are shown separately on the face of the balance sheet.

The results of discontinued operations – comprising the post-tax profit or loss of discontinued operations and the post-tax gain or loss recognised either on measurement to fair value less costs to sell or on the disposal of the discontinued operation are shown as a single amount on the face of the income statement.

6. Pensions

RBSH Group provides post-retirement benefits in the form of pensions to eligible employees under defined contribution plans.

Contributions to defined contribution pension schemes are recognised in profit or loss when payable.

For defined benefit schemes, the defined benefit obligation is measured on an actuarial basis using the projected unit credit method and discounted at a rate determined by reference to market yields at the end of the reporting period on

high quality corporate bonds of equivalent term and currency to the scheme liabilities. Scheme assets are measured at their fair value. The difference between scheme assets and scheme liabilities – the net defined benefit asset or liability – is recognised in the balance sheet. A defined benefit asset is limited to the present value of any economic benefits available to RBSH Group in the form of refunds from the plan or reduced contributions to it

The charge to profit or loss for pension costs (recorded in operating expenses) comprises:

- the current service cost.
- interest, computed at the rate used to discount scheme liabilities, on the net defined benefit liability or asset.
- past service cost resulting from a scheme amendment or curtailment.
- gains or losses on settlement.

A curtailment occurs when RBSH Group significantly reduces the number of employees covered by a plan. A plan amendment occurs when RBSH Group introduces, or withdraws, a defined benefit plan or changes the benefits payable under an existing defined benefit plan. Past service cost may be either positive (when benefits are introduced or changed so that the present value of the defined benefit obligation increases) or negative (when benefits are withdrawn or changed so that the present value of the defined benefit obligation decreases). A settlement is a transaction that eliminates all further obligation for part or all of the benefits.

Actuarial gains and losses (i.e. gains or/and losses on re-measuring of the net defined benefit asset or liability) are recognised in full in the period in which they arise in other comprehensive income.

7. Foreign currencies

RBSH Group entities record transactions in foreign currencies in their functional currency - the currency of the primary economic environment in which they operate at the foreign exchange rate ruling at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated into the relevant functional currency at the foreign exchange rates ruling at the balance sheet date. Foreign exchange differences arising on the settlement of foreign currency transactions and from the translation of monetary assets and liabilities are reported in income from trading activities except for differences arising on cash flow hedges and hedges of net investments in foreign operations (see Accounting policy 20).

Accounting policies

Non-monetary items denominated in foreign currencies that are stated at fair value are translated into the relevant functional currency at the foreign exchange rates ruling at the dates the values are determined. Translation differences arising on non-monetary items measured at fair value are recognised in profit or loss except for differences arising on available-for-sale non-monetary financial assets, for example equity shares, which are recognised in other comprehensive income unless the asset is the hedged item in a fair value hedge.

Assets and liabilities of foreign operations are translated into euro at foreign exchange rates ruling at the balance sheet date. Income and expenses of foreign operations are translated into euro at average exchange rates unless these do not approximate to the foreign exchange rates ruling at the dates of the transactions. Foreign exchange differences arising on the translation of a foreign operation are recognised in other comprehensive income. The amount accumulated in equity is reclassified from equity to profit or loss on disposal or partial disposal of a foreign operation.

8. Leases

As lessor

Contracts with customers to lease assets are classified as finance leases if they transfer substantially all the risks and rewards of ownership of the asset to the customer; all other contracts with customers to lease assets are classified as operating leases.

Rental income from operating leases is recognised in income on a straight-line basis over the lease term unless another systematic basis better represents the time pattern of the asset's use. Operating lease assets are included within Property, plant and equipment and depreciated over their useful lives. Operating lease rentals receivable are included in Other operating income.

As lessee

RBSH Group's contracts to lease assets are principally operating leases. Operating lease rental expense is included in Premises and equipment costs and recognised as an expense on a straight-line basis over the lease term unless another systematic basis better represents the benefit to RBSH Group.

9. Provisions

RBSH Group recognises a provision for a present obligation resulting from a past event when it is more likely than not that it will be required to transfer economic benefits to settle the obligation and the amount of the obligation can be estimated reliably.

Provision is made for restructuring costs, including the costs of redundancy, when RBSH Group has a constructive obligation to restructure. An obligation exists when RBSH Group has a detailed formal plan for the restructuring and has raised a valid expectation in those affected by starting to implement the plan or announcing its main features.

If RBSH Group has a contract that is onerous, it recognises the present obligation under the contract as a provision. An onerous contract is one where the unavoidable costs of meeting RBSH Group's contractual obligations exceed the expected economic benefits. When RBSH Group vacates a leasehold property, a provision is recognised for the costs under the lease less any expected economic benefits (such as rental income).

Contingent liabilities are possible obligations arising from past events whose existence will be confirmed only by uncertain future events or present obligations arising from past events that are not recognised because either an outflow of economic benefits is not probable or the amount of the obligation cannot be reliably measured. Contingent liabilities are not recognised but information about them is disclosed unless the possibility of any outflow of economic

benefits in settlement is remote.

10. Tax

Income tax expense or income, comprising current tax and deferred tax, is recorded in the income statement except income tax on items recognised outside profit or loss which is credited or charged to other comprehensive income or to equity as appropriate.

Current tax is income tax payable or recoverable in respect of the taxable profit or loss for the year arising in income or in equity. Provision is made for current tax at rates enacted or substantively enacted at the balance sheet date.

Deferred tax is the tax expected to be payable or recoverable in respect of temporary differences between the carrying amount of an asset or liability for accounting purposes and its carrying amount for tax purposes. Deferred tax liabilities are generally recognised for all taxable temporary differences and deferred tax assets are recognised to the extent that it is probable that they will be recovered.

Deferred tax is not recognised on temporary differences that arise from initial recognition of an asset or a liability in a transaction (other than a business combination) that at the time of the transaction affects neither accounting nor taxable profit or loss. Deferred tax is calculated using tax rates expected to apply in the periods when the assets will be realised or the liabilities settled, based on tax rates and laws enacted, or substantively enacted, at the balance sheet date.

Deferred tax assets and liabilities are offset where RBSH Group has a legally enforceable right to offset and where they relate to income taxes levied by the same taxation authority either on an individual RBSH Group company or on RBSH Group companies in the same tax group that intend, in future periods, to settle current tax liabilities and assets on a net basis or on a gross basis simultaneously.

Accounting policies

11. Financial assets

On initial recognition, financial assets are classified into held-to-maturity investments; held-for-trading; designated as at fair value through profit or loss; loans and receivables; or available-for-sale financial assets. Regular way purchases of financial assets classified as loans and receivables are recognised on settlement date; all other regular way transactions in financial assets are recognised on trade date.

Held-to-maturity investments - a financial asset may be classified as a held-to-maturity investment only if it has fixed or determinable payments, a fixed maturity and RBSH Group has the positive intention and ability to hold to maturity. Held-to-maturity investments are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at amortised cost using the effective interest method (see Accounting policy 4) less any impairment losses.

Held-for-trading - a financial asset is classified as held-for-trading if it is acquired principally for sale in the near term, or forms part of a portfolio of financial instruments that are managed together and for which there is evidence of short-term profit taking, or it is a derivative (not in a qualifying hedge relationship). Held-for-trading financial assets are recognised at fair value with transaction costs being recognised in profit or loss. Subsequently they are measured at fair value. Gains and losses on held-for-trading financial assets are recognised in profit or loss as they arise.

Designated as at fair value through profit or loss - financial assets may be designated as at fair value through profit or loss only if such designation (a) eliminates or significantly reduces a measurement or recognition inconsistency; or (b) applies to a group of financial assets, financial liabilities or both, that RBSH Group manages and evaluates on a fair value basis; or (c) relates to an instrument that contains an embedded derivative which is not evidently closely related to the host contract. Financial assets that RBSH Group designates on initial recognition as being at fair value through profit or loss are recognised at fair value, with transaction costs being recognised in profit or loss, and are subsequently measured at fair value. Gains and losses on financial assets that are designated as at fair value through profit or loss are recognised in profit or loss as they arise.

Loans and receivables - non-derivative financial assets with fixed or determinable repayments that are not quoted in an active market are classified as loans and receivables, except those that are classified as available-for-sale or as held-for-trading, or designated as at fair value through profit or loss. Loans and receivables are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at amortised cost using the effective interest method (see Accounting policy 4) less any impairment losses.

Available-for-sale financial assets - financial assets that are not classified as held-to-maturity, held-for-trading, designated as at fair value through profit or loss, or loans and receivables are classified as available-for-sale.

Financial assets can be designated as available-for-sale on initial recognition. Available-for-sale financial assets are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at fair value. Unquoted equity investments whose fair value cannot be measured reliably are carried at cost and classified as available-for-sale financial assets. Impairment losses and exchange differences resulting from retranslating the amortised cost of foreign currency monetary available-for-sale financial assets are recognised in profit or loss together with interest calculated using the effective interest method (see Accounting policy 4), as are gains and losses attributable to the hedged risk on available-for-sale financial assets that are hedged items in fair value hedges (see Accounting policy 20).

Other changes in the fair value of available-for-sale financial assets and any related tax are reported in other comprehensive income until disposal, when the cumulative gain or loss is reclassified from equity to profit or loss.

Reclassifications - held-for-trading and available-for-sale financial assets that meet the definition of loans and receivables (non-derivative financial assets with fixed or determinable payments that are not quoted in an active market) may be reclassified to loans and receivables if RBSH Group has the intention and ability to hold the financial asset for the foreseeable future or until maturity. RBSH Group typically regards the foreseeable future as twelve months from the date of reclassification. Additionally, held-for-trading financial assets that do not meet the definition of loans and receivables may, in rare circumstances, be transferred to available-for-sale financial assets or to held-to-maturity investments. Reclassifications are made at fair value. This fair value becomes the asset's new cost or amortised cost as appropriate. Gains and losses recognised up to the date of reclassification are not reversed.

Fair value for a net open position in a financial asset that is quoted in an active market is the current bid price times the number of units of the instrument held. Fair values for financial assets not quoted in an active market are determined using appropriate valuation techniques including discounting future cash flows, option pricing models and other methods that are consistent with accepted economic methodologies for pricing financial assets.

12. Impairment of financial assets

RBSH Group assesses at each balance sheet date whether there is any objective evidence that a financial asset or group of financial assets classified as held-to-maturity, available-for-sale or loans and receivables is impaired. A financial asset or portfolio of financial assets is impaired and an impairment loss incurred if there is objective evidence that an event or events since initial recognition of the asset have adversely affected the amount or timing of future cash flows from the asset.

Accounting policies

Financial assets carried at amortised cost - if there is objective evidence that an impairment loss on a financial asset or group of financial assets classified as loans and receivables or as held-to-maturity investments has incurred, RBSH Group measures the amount of the loss as the difference between the carrying amount of the asset or group of assets and the present value of estimated future cash flows from the asset or group of assets discounted at the effective interest rate of the instrument at initial recognition. For collateralised loans and receivables, estimated future cash flows include cash flows that may result from foreclosure less the costs of obtaining and selling the collateral, whether or not foreclosure is probable. Where, in the course of the orderly realisation of a loan, it is exchanged for equity shares or property, the exchange is accounted for as the sale of the loan and the acquisition of equity securities or investment property. Where RBSH Group's interest in equity shares following the exchange is such that RBSH Group controls an entity, that entity is consolidated.

Impairment losses are assessed individually for financial assets that are individually significant and individually or collectively for assets that are not individually significant.

Impairment losses are recognised in profit or loss and the carrying amount of the financial asset or group of financial assets reduced by establishing an allowance for impairment losses. If, in a subsequent period, the amount of the impairment loss reduces and the reduction can be ascribed to an event after the impairment was recognised, the previously recognised loss is reversed by adjusting the allowance. Once an impairment loss has been recognised on a financial asset or group of financial assets, interest income is recognised on the carrying amount using the rate of interest at which estimated future cash flows were discounted in measuring impairment.

Impaired loans and receivables are written off, i.e. the impairment provision is applied in writing down the loan's carrying value partially or in full, when RBSH Group concludes that there is no longer any realistic prospect of recovery of part or all of the loan. For loans that are individually assessed for impairment, the timing of write-off is determined on a case-by-case basis. Such loans are reviewed regularly and write-offs will be prompted by bankruptcy, insolvency, renegotiation and similar events. RBSH Group had no collectively assessed portfolios in 2014 (2013 - €9 million; 2012 - €15 million).

Financial assets carried at fair value - when a decline in the fair value of a financial asset classified as available-for-sale has been recognised directly in other comprehensive income and there is objective evidence that it is impaired, the cumulative loss is reclassified from equity to profit or loss. The loss is measured as the difference between the amortised cost of the financial asset and its current fair value. Impairment losses on available-for-sale equity instruments are not reversed through profit or loss, but those on available-for-sale debt instruments are reversed, if there is an increase in fair value that is objectively related to a subsequent event.

13. Financial liabilities

On initial recognition, financial liabilities are classified into held-for-trading; designated as at fair value through profit or loss; or amortised cost. Issues of financial liabilities measured at amortised cost are recognised on settlement date; all other regular way transactions in financial liabilities are recognised on trade date.

Held-for-trading - a financial liability is classified as held-for-trading if it is incurred principally for repurchase in the near term, or forms part of a portfolio of financial instruments that are managed together and for which there is evidence of short-term profit taking, or it is a derivative (not in a qualifying hedge relationship).

Held-for-trading financial liabilities are recognised at fair value with transaction costs being recognised in profit or loss. Subsequently they are measured at fair value. Gains and losses are recognised in profit or loss as they arise.

Designated as at fair value through profit or loss - financial liabilities may be designated as at fair value through profit or loss only if such designation (a) eliminates or significantly reduces a measurement or recognition inconsistency; or (b) applies to a group of financial assets, financial liabilities or both that RBSH Group manages and evaluates on a fair value basis; or (c) relates to an instrument that contains an embedded derivative which is not evidently closely related to the host contract.

Financial liabilities that RBSH Group designates on initial recognition as being at fair value through profit or loss are recognised at fair value, with transaction costs being recognised in profit or loss, and are subsequently measured at fair value. Gains and losses on financial liabilities that are designated as at fair value through profit or loss are recognised in profit or loss as they arise.

Financial liabilities designated as at fair value through profit or loss principally comprise structured liabilities issued by RBSH Group: designation significantly reduces the measurement inconsistency between these liabilities and the related derivatives carried at fair value.

Amortised cost - all other financial liabilities are measured at amortised cost using the effective interest method (see Accounting policy 4).

Fair value - fair value for a net open position in a financial liability that is quoted in an active market is the current offer price times the number of units of the instrument issued. Fair values for financial liabilities not quoted in an active market are determined using appropriate valuation techniques including discounting future cash flows, option pricing models and other methods that are consistent with accepted economic methodologies for pricing financial liabilities.

14. Financial guarantee contracts

Under a financial guarantee contract, RBSH Group, in return for a fee, undertakes to meet a customer's obligations under the terms of a debt instrument if the customer fails to do so. A financial guarantee is recognised as a liability; initially at fair value and, if not designated as at fair value through profit or loss, subsequently at the higher of its initial value less cumulative amortisation and any provision under the contract measured in accordance with Accounting policy 9. Amortisation is calculated so as to recognise fees receivable in profit or loss over the period of the guarantee.

Accounting policies

15. Loan commitments

Provision is made for loan commitments, other than those classified as held-for-trading, if it is probable that the facility will be drawn and the resulting loan will be recognised at a value less than the cash advanced. Syndicated loan commitments in excess of the level of lending under the commitment approved for retention by RBSH Group are classified as held-for-trading and measured at fair value.

16. Derecognition

A financial asset is derecognised when the contractual right to receive cash flows from the asset has expired or when it has been transferred and the transfer qualifies for derecognition. A transfer requires that RBSH Group either (a) transfers the contractual rights to receive the asset's cash flows; or (b) retains the right to the asset's cash flows but assumes a contractual obligation to pay those cash flows to a third party. After a transfer, RBSH Group assesses the extent to which it has retained the risks and rewards of ownership of the transferred asset. The asset remains on the balance sheet if substantially all the risks and rewards have been retained. It is derecognised if substantially all the risks and rewards have been transferred. If substantially all the risks and rewards have been neither retained nor transferred, RBSH Group assesses whether or not it has retained control of the asset. If it has not retained control, the asset is derecognised. Where RBSH Group has retained control of the asset, it continues to recognise the asset to the extent of its continuing involvement; if RBSH Group has not retained control of the asset, it is derecognised.

A financial liability is removed from the balance sheet when the obligation is discharged, or cancelled, or expires. On the redemption or settlement of debt securities (including subordinated liabilities) issued by RBSH Group, RBSH Group derecognises the debt instrument and records a gain or loss being the difference between the debt's carrying amount and the cost of redemption or settlement. The same treatment applies where the debt is exchanged for a new debt issue that has terms substantially different from those of the existing debt. The assessment of whether the terms of the new debt instrument are substantially different takes into account qualitative and quantitative characteristics including a comparison of the present value of the cash flows under the new terms with present value of the remaining cash flows of the original debt issue discounted at the effective interest rate of the original debt issue.

17. Sale and repurchase transactions

Securities subject to a sale and repurchase agreement under which substantially all the risks and rewards of ownership are retained by RBSH Group continue to be shown on the balance sheet and the sale proceeds recorded as a financial liability.

Securities acquired in a reverse sale and repurchase transaction under which RBSH Group is not exposed to substantially all the risks and rewards of ownership are not recognised on the balance sheet and the consideration paid is recorded as a financial asset.

Securities borrowing and lending transactions are usually secured by cash or securities advanced by the borrower. Borrowed securities are not recognised on the balance sheet or lent securities derecognised. Cash collateral given or received is treated as a loan or deposit; collateral in the form of securities is not recognised. However, where securities borrowed are transferred to third parties, a liability for the obligation to return the securities to the stock lending counterparty is recorded.

18. Netting

Financial assets and financial liabilities are offset and the net amount presented in the balance sheet when, and only when, RBSH Group currently has a legally enforceable right to set off the recognised amounts and it intends either to settle on a net basis or to realise the asset and settle the liability simultaneously. RBSH Group is party to a number of

arrangements, including master netting agreements, that give it the right to offset financial assets and financial liabilities but where it does not intend to settle the amounts net or simultaneously and therefore the assets and liabilities concerned are presented gross.

19. Capital instruments

RBSH Group classifies a financial instrument that it issues as a liability if it is a contractual obligation to deliver cash or another financial asset, or to exchange financial assets or financial liabilities on potentially unfavourable terms and as equity if it evidences a residual interest in the assets of RBSH Group after the deduction of liabilities. The components of a compound financial instrument issued by RBSH Group are classified and accounted for separately as financial assets, financial liabilities or equity as appropriate.

Incremental costs and related tax that are directly attributable to an equity transaction are deducted from equity. The consideration for any ordinary shares of the company purchased by RBSH Group (treasury shares) is deducted from equity. On the cancellation of treasury shares their nominal value is removed from equity and any excess of consideration over nominal value is added to shareholders' equity. On the sale or reissue of treasury shares the consideration received is credited to equity, net of any directly attributable incremental costs and related tax.

20. Derivatives and hedging

Derivative financial instruments are initially recognised, and subsequently measured, at fair value. The RBSH Group's approach to determining the fair value of financial instruments is set out in the section of Critical accounting policies and key sources of estimation uncertainty entitled Fair value - financial instruments.

A derivative embedded in a contract is accounted for as a stand-alone derivative if its economic characteristics are not closely related to the economic characteristics of the host contract; unless the entire contract is measured at fair value with changes in fair value recognised in profit or loss. Gains and losses arising from changes in the fair value of derivatives that are not the hedging instrument in a qualifying hedge are recognised as they arise in profit or loss. Gains and losses are recorded in Income from trading activities except for gains and losses on those derivatives that are managed together with financial instruments designated at fair value; these gains and losses are included in Other operating income.

RBSH Group enters into three types of hedge relationship: hedges of changes in the fair value of a recognised asset or liability or firm commitment (fair value hedges); hedges of the variability in cash flows from a recognised asset or liability or a highly probable forecast transaction (cash flow hedges); and hedges of the net investment in a foreign operation.

Accounting policies

Hedge relationships are formally designated and documented at inception. The documentation identifies the hedged item and the hedging instrument and details the risk that is being hedged and the way in which effectiveness will be assessed at inception and during the period of the hedge. If the hedge is not highly effective in offsetting changes in fair values or cash flows attributable to the hedged risk, consistent with the documented risk management strategy, hedge accounting is discontinued. Hedge accounting is also discontinued if RBSH Group revokes the designation of a hedge relationship.

Fair value hedge - in a fair value hedge, the gain or loss on the hedging instrument is recognised in profit or loss. The gain or loss on the hedged item attributable to the hedged risk is recognised in profit or loss and, where the hedged item is measured at amortised cost, adjusts the carrying amount of the hedged item. Hedge accounting is discontinued if the hedge no longer meets the criteria for hedge accounting; or if the hedging instrument expires or is sold, terminated or exercised; or if hedge designation is revoked. If the hedged item is one for which the effective interest rate method is used, any cumulative adjustment is amortised to profit or loss over the life of the hedged item using a recalculated effective interest rate.

Cash flow hedge - in a cash flow hedge, the effective portion of the gain or loss on the hedging instrument is recognised in other comprehensive income and the ineffective portion in profit or loss. When the forecast transaction results in the recognition of a financial asset or financial liability, the cumulative gain or loss is reclassified from equity to profit or loss in the same periods in which the hedged forecast cash flows affect profit or loss. Otherwise the cumulative gain or loss is removed from equity and recognised in profit or loss at the same time as the hedged transaction. Hedge accounting is discontinued if the hedge no longer meets the criteria for hedge accounting; if the hedging instrument expires or is sold, terminated or exercised; if the forecast transaction is no longer expected to occur; or if hedge designation is revoked. On the discontinuance of hedge accounting (except where a forecast transaction is no longer expected to occur), the cumulative unrealised gain or loss is reclassified from equity to profit or loss when the hedged cash flows occur or, if the forecast transaction results in the recognition of a financial asset or financial liability, when the hedged forecast cash flows affect profit or loss. Where a forecast transaction is no longer expected to occur, the cumulative unrealised gain or loss is reclassified from equity to profit or loss immediately.

Hedge of net investment in a foreign operation - in the hedge of a net investment in a foreign operation, the portion of foreign exchange differences arising on the hedging instrument determined to be an effective hedge is recognised in other comprehensive income. Any ineffective portion is recognised in profit or loss. Non-derivative financial liabilities as well as derivatives may be the hedging instrument in a net investment hedge. On disposal or partial disposal of a foreign operation, the amount accumulated in equity is reclassified from equity to profit or loss.

21. Associates and joint ventures

An associate is an entity over which the RBSH Group has significant influence. A joint venture is one which it controls jointly with other parties. Investments in associates and interests in joint ventures are recognised using the equity method.

They are stated initially at cost, including attributable goodwill, and subsequently adjusted for post-acquisition changes in the RBSH Group's share of net assets.

22. Cash and cash equivalents

In the cash flow statement, cash and cash equivalents comprises cash and demand deposits with banks together with short-term highly liquid investments that are readily convertible to known amounts of cash and subject to insignificant risk of change in value.

Critical accounting policies and key sources of estimation uncertainty

The reported results of RBSH Group are sensitive to the accounting policies, assumptions and estimates that underlie the preparation of its financial statements. Dutch company law and IFRS require the management, in preparing RBSH Group's financial statements, to select suitable accounting policies, apply them consistently and make judgements and estimates that are reasonable and prudent. In the absence of an applicable standard or interpretation, IAS 8 'Accounting Policies, Changes in Accounting Estimates and Errors', requires management to develop and apply an accounting policy that results in relevant and reliable information in the light of the requirements and guidance in IFRS dealing with similar and related issues and the IASB's 'Framework for the Preparation and Presentation of Financial Statements'. The judgements and assumptions involved in RBSH Group's accounting policies that are considered by management to be the most important to the portrayal of its financial condition are discussed below. The use of estimates, assumptions or models that differ from those adopted by RBSH Group would affect its reported results.

Provisions for liabilities

Provisions are liabilities of uncertain timing or amount, and are recognised when there is a present obligation as a result of a past event, the outflow of economic benefit is probable and the outflow can be estimated reliably. Judgement is involved in determining whether an obligation exists, and in estimating the probability, timing and amount of any outflows. Professional expert advice is taken on litigation provisions, taxation provisions, property provisions including onerous contracts and similar liabilities. Where RBSH Group can look to another party such as an insurer to pay some or all of the expenditure required to settle a provision, any reimbursement is recognised when, and only when, it is virtually certain that it will be received.

Provisions for litigation - RBSH Group is party to legal proceedings in the Netherlands, the United States and other jurisdictions, arising out of their normal business operations. The measurement and recognition of liabilities in respect of litigation involves a high degree of management judgement. Before the existence of a present obligation as a result of a past event a liability can be confirmed, numerous facts may need to be established, involving extensive and time-consuming discovery, and novel or unsettled legal questions addressed. Once it is determined there is an obligation, assessing the probability of economic outflows and estimating the amount of any liability can be very difficult. In many proceedings, it is not possible to determine whether any loss is probable or to estimate the amount of any loss. Furthermore, for an individual matter, there can be a wide range of possible outcomes and often it is not practicable to quantify a range of such outcomes.

Accounting policies

RBSH Group's outstanding litigation is periodically assessed in consultation with external professional advisers, where appropriate, to determine the likelihood of RBSH Group incurring a liability. A detailed description of RBSH Group's material legal proceedings and a discussion of the nature of the associated uncertainties are given in Note 26.

Loan impairment provisions

RBSH Group's loan impairment provisions are established to recognise incurred impairment losses in its portfolio of loans classified as loans and receivables and carried at amortised cost. A loan is impaired when there is objective evidence that events since the loan was granted have affected expected cash flows from the loan.

Such objective evidence, indicative that a borrower's financial condition has deteriorated can include:

- for loans that are individually assessed, the non-payment of interest or principal; debt renegotiation; probable bankruptcy or liquidation; significant reduction in the value of any security; breach of limits or covenants; and deteriorating trading performance and
- for collectively assessed portfolios: the borrowers' payment status and observable data about relevant macroeconomic measures.

The impairment loss is the difference between the carrying value of the loan and the present value of estimated future cash flows at the loan's original effective interest rate.

At 31 December 2014, loans and advances to customers classified as loans and receivables totalled €3,272 million (2013 - €3,406 million; 2012 - €5,932 million) and customer loan impairment provisions amounted to €114 million (2013 - €194 million; 2012 - €341 million).

There are two components to RBSH Group's loan impairment provisions: individual and latent.

Individual component - all impaired loans that exceed specific thresholds are individually assessed for impairment. Individually assessed loans principally comprise RBSH Group's portfolio of commercial loans to medium and large businesses. Impairment losses are recognised as the difference between the carrying value of the loan and the discounted value of management's best estimate of future cash repayments and proceeds from any security held. These estimates take into account the customer's debt capacity and financial flexibility; the level and quality of its earnings; the amount and sources of cash flows; the industry in which the counterparty operates; and the realisable value of any security held.

Estimating the quantum and timing of future recoveries involves significant judgement. The size of receipts will depend on the future performance of the borrower and the value of security, both of which will be affected by future economic conditions; additionally, collateral may not be readily marketable. The actual amount of future cash flows and the date they are received may differ from these estimates and consequently actual losses incurred may differ from those recognised in these financial statements.

Latent loss component - provisions are held against estimated impairment losses in the performing portfolio that have yet to be identified as at the balance sheet date. To assess the latent loss within its portfolios, RBSH Group has developed methodologies to estimate the time that an asset can remain impaired within a performing portfolio before it is identified and reported as such.

Fair value – financial instruments

Financial instruments classified as held-for-trading or designated as at fair value through profit or loss and financial assets classified as available-for-sale are recognised in the financial statements at fair value. All derivatives are measured at fair value. Gains or losses arising from changes in the fair value of financial instruments classified as held-for trading or designated as at fair value through profit or loss are included in the income statement. Unrealised gains and losses on available-for sale financial assets are recognised directly in equity unless an impairment loss is recognised.

Financial instruments measured at fair value include:

Loans and advances (held-for-trading and designated as at fair value though profit or loss) - principally comprise reverse repurchase agreements (reverse repos) and cash collateral.

Debt securities (held-for-trading, designated as at fair value though profit or loss and available-for-sale) - debt securities include those issued by governments, municipal bodies, mortgage agencies and financial institutions as well as corporate bonds, debentures and residual interests in securitisations.

Equity securities (held-for-trading, designated as at fair value though profit or loss and available-for-sale) - comprise equity shares of companies or corporations both listed and unlisted.

Deposits by banks and customer accounts (held-for-trading and designated as at fair value though profit or loss) - deposits measured at fair value principally include repurchase agreements (repos), cash collateral and investment contracts issued by RBSH Group's life assurance businesses.

Debt securities in issue (held-for-trading and designated as at fair value though profit or loss) - principally comprise medium term notes.

Short positions (held-for-trading) - arise in dealing and market making activities where debt securities and equity shares are sold which RBSH Group does not currently possess.

Accounting policies

Derivatives - these include swaps (currency swaps, interest rate swaps, credit default swaps, total return swaps and equity and equity index swaps), forward foreign exchange contracts, forward rate agreements, futures (currency, interest rate and equity) and options (exchange-traded options on currencies, interest rates and equities and equity indices and OTC currency and equity options, interest rate caps and floors and swaptions).

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Fair values are determined from quoted prices in active markets for identical financial assets or financial liabilities where these are available. Fair value for a net open position in a financial instrument in an active market is the number of units of the instrument held times the current bid price (for financial assets) or offer price (for financial liabilities). In determining the fair value of derivative financial instruments, gross long and short positions measured at current mid market prices are adjusted by bid-offer reserves calculated on a portfolio basis. Credit valuation adjustments are made when valuing derivative financial assets to incorporate counterparty credit risk. Adjustments are also made when valuing financial liabilities to reflect RBSH Group's own credit standing. Where the market for a financial instrument is not active, fair value is established using a valuation technique. These valuation techniques involve a degree of estimation, the extent of which depends on the instrument's complexity and the availability of market-based data.

Accounting developments

International Financial Reporting Standards (IFRS)

A number of IFRSs and amendments to IFRS were in issue at 31 December 2014 that would affect RBS Group from 1 January 2015 or later.

Effective for 2015

IAS 19 'Defined Benefit Plans: Employee Contributions' was issued in November 2013. This amendment distinguishes the accounting for employee contributions that are related to service from that for those that are independent of service.

Annual Improvements to IFRS 2010 - 2012 and 2011 - 2013 cycles were issued in December 2013 making a number of minor amendments to IFRS.

Implementation of these changes is not expected to have a material effect on RBSH Group's financial statements.

Effective after 2015

In July 2014 the IASB published IFRS 9 'Financial Instruments'. IFRS 9 replaces the current financial instruments standard IAS 39, setting out new accounting requirements in a number of areas. First, there are revisions to the classification and measurement of financial instruments. There are new restrictions on the ability to account for financial assets at amortised cost and a prohibition on the bifurcation of embedded derivatives from financial assets. Accounting for financial liabilities is largely unchanged except for the treatment of changes in the fair value of liabilities designated as at fair value through profit or loss attributable to own credit risk; these are recognised in other comprehensive income. Secondly, there are amended requirements for hedge accounting designed to align the accounting more closely to the risk management framework and remove or simplify some of the rule-based requirements of IAS 39. The basic mechanics of hedge accounting: fair value, cash flow and net investment hedges are retained. Finally, there is a new approach to credit impairment provisions moving from IAS 39's incurred loss model to an expected loss model. An expected loss model will result in the recognition of credit impairment losses

earlier than an incurred loss model. Subject to EU endorsement, IFRS 9 is applicable for periods beginning on or after 1 January 2018.

IFRS 9 makes major and fundamental changes to accounting for financial instruments. RBSH Group is continuing its assessment of its effect on RBSH Group's financial statements.

IFRS 15 'Revenue from Contracts with Customers' was issued in May 2014. It will replace IAS 11 'Construction Contracts', IAS 18 'Revenue' and several Interpretations. Contracts are bundled or unbundled into distinct performance obligations with revenue recognised as the obligations are met. It is effective from 1 January 2017.

'Accounting for Acquisitions of interests in Joint Operations' issued in May 2014 amends IFRS 11 'Joint Arrangements' to clarify that the donor of assets and liabilities to a joint operation should hold its continuing interest in them at the lower of cost and recoverable amount. The effective date is 1 January 2016.

'Clarification of Acceptable Methods of Depreciation and Amortisation' issued in May 2014 amends IAS 16 'Property, Plant and Equipment' and IAS 38 'Intangible Assets' requiring amortisation to be based on the consumption of an asset, introducing a rebuttable presumption that this is not achieved by an amortisation profile aligned to revenue. The effective date is 1 January 2016.

Annual Improvements to IFRS 2012 - 2014 cycle was issued in September 2014 making a number of minor amendments to IFRS. Its effective date is 1 January 2016.

Amendments to IFRS 10 'Consolidated Financial Statements', IFRS 12 'Disclosure of Interests in Other Entities' and IAS 28 'Investments in Associates and Joint Ventures' were issued in September 2014 to clarify the accounting for sales between an investor, its associate or joint ventures, and in December 2014 to clarify the application of the investment entity consolidation exception. The effective date of these amendments is 1 January 2016.

An amendment to IAS 1 'Presentation of Financial Statements' was issued in December 2014 to clarify the application of materiality to financial statements. Its effective date is 1 January 2016.

RBSH Group is assessing the effects of these new standards.

Notes on the consolidated accounts

1 Net interest income

	2014	2013	2012
	€m	€m	€m
Loans and advances to customers	256	339	865
Loans and advances to banks	48	100	207
Amounts due from ultimate holding company	151	183	114

Other operating income	(47)	83	(217)
Non-interest income	86		199	103	

Notes:

(1) The analysis of income from trading activities is based on how the business is organised and the underlying risks managed. Income from trading activities comprises gains and losses on financial instruments held-for-trading, both realised and unrealised, interest income and dividends and the related funding costs.

The types of instruments include:

- Foreign exchange: spot foreign exchange contracts, currency swaps and options, emerging markets and related hedges and funding.
 - Interest rate: interest rate swaps, forward foreign exchange contracts, forward rate agreements, interest rate options, interest rate futures and related hedges and funding.
 - Credit: asset-backed securities, corporate bonds, credit derivatives and related hedges and funding.
 - Equities and commodities: equities, equity derivatives and related hedges and funding, commodities, commodity contracts and related hedges and funding.
- (2) Measured as the change in fair value from movements in the year in the credit risk premium payable by RBSH Group.

The average number of persons employed, rounded to the nearest hundred, in the continuing operations of RBSH Group during the year was 2,200 (2013 - 5,900; 2012 - 14,500).

Notes on the consolidated accounts

4 Pensions

RBSH Group sponsors a number of pension schemes overseas. These schemes include both defined contribution and defined benefit plans, whose assets are independent of RBSH Group's finances. RBSH Group's defined benefit schemes generally provide pensions that are based on average or final salary with annual price evaluation of vested rights. In general, employees do not make contributions for basic pensions but may make voluntary contributions to secure additional benefits.

RBSH Group has no material post-retirement benefit obligations other than pensions.

During 2012, RBSH Group's main pension scheme was transferred to RBS plc. The majority of RBSH Group pension plans are located in India. At 31 December 2012, all of RBSH Group's defined benefit plans were included in assets and liabilities of disposal groups. At 31 December 2014 and 2013, these schemes were no longer classified as disposal groups.

Interim valuations of RBSH Group's schemes under IAS 19 'Employee Benefits' were prepared to 31 December with the support of independent actuaries, using the following assumptions:

	2014	All schemes 2013	2012
Principal actuarial assumptions at 31 December (weighted average)	%	%	%
Discount rate	7.9	9.4	—
Expected return on plan assets (weighted average)	7.9	9.4	—
Rate of increase in salaries	5.0	4.0	—

	2014	All schemes 2013	2012
Major classes of plan assets as a percentage of total plan assets	%	%	%
Government fixed interest bonds	25.4	48.1	—
Corporate and other bonds	74.6	50.1	—
Cash and other assets	—	1.8	—

	All schemes Fair value of plan assets	Present value of defined benefit obligations	Net pension (surplus)/ deficit
Changes in value of net pension (surplus)/deficit	€m	€m	€m
At 1 January 2013	—	—	—
Transfers from disposal group	13	37	24

0.25% additional rate of increase in deferred pensions	—	—	—
0.25% additional rate of increase in salaries	—	—	—
Longevity increase of 1 year	1	1	—

Pension risk

RBSH Group is exposed to risk from its defined benefit pension schemes to the extent that the assets of the schemes do not fully match the timing and amount of the schemes' liabilities. Pensions scheme liabilities vary with changes to long-term interest rates, inflation, pensionable salaries and the longevity of scheme members as well as changes in legislation. Ultimate responsibility for RBSH Group's pension scheme is separate from RBSH Group management. RBSH Group is exposed to the risk that the market value of the schemes' assets, together with future returns and any additional future contributions could be considered insufficient to meet the liabilities as they fall due. In such circumstances, RBSH Group could be obliged, or may choose, to make additional contributions to the schemes.

The pension funds in India are the main source of pension risk. The Trustees or Pension Boards of these schemes are solely responsible for the investment of the schemes' assets which are held separately from the assets of RBSH Group.

Notes on the consolidated accounts

5 Auditor's remuneration

Amounts charged to the income statement relating to RBSH Group's auditors for statutory audit and other services are set out below. All audit-related and other services are approved by RBSH Group Supervisory Board and are subject to strict controls to ensure external auditor's independence is unaffected by the provision of other services. The Committee recognises that for certain assignments the auditors are best placed to perform the work economically. For other work RBSH Group selects the supplier best placed to meet its requirements. RBSH Group's auditors are free to tender for such work in competition with other firms where the work is permissible under audit independence rules.

	2014	2013	2012
	€m	€m	€m
Fees for the audit of RBSH Group's annual accounts	3.5	5.0	8.5
Audit related services (1)	0.7	0.8	0.9
Total audit and audit-related services	4.2	5.8	9.4
Fees to the auditors and their associates for other services			
- Services relating to taxation	—	—	0.1
- Other assurance services	0.4	0.1	—
Total other services	0.4	0.1	0.1
Total	4.6	5.9	9.5

Note:

(1) Includes fees of €0.1 million in relation to statutory audits and €0.6 million in respect of regulatory audits.

Deloitte Accountants B.V. provided audit and audit-related services amounting to €0.8 million (2013 - €1.2 million; 2012 - €3.5 million). The remaining amounts relate to services provided by other Deloitte Member Firms. The amount paid to Deloitte LLP in 2014 in respect of audit fees was €1.5 million.

Notes on the consolidated accounts

6 Tax

	2014	2013	2012
	€m	€m	€m
Current tax			
Charge for the year	(57)	(49)	(85)
Over/(under) provision in respect of prior periods	18	162	(105)
	(39)	113	(190)
Deferred tax			
(Charge)/credit for the year	(15)	(45)	95
Under provision in respect of prior periods	(4)	(80)	(34)
Tax charge for the year	(58)	(12)	(129)

The actual tax charge differs from the expected tax credit computed by applying the statutory tax rate of the Netherlands of 25% as follows:

	2014	2013	2012
	€m	€m	€m
Expected tax credit	14	36	222
Non-deductible items	(54)	(18)	(5)
Non-taxable items (including recycling of foreign exchange reserve)	65	35	87
Foreign profits taxed at other rates	6	5	(5)
Reduction in deferred tax asset following change in the rate of UK corporation tax (1)	—	—	(32)
Losses in year not recognised	(67)	(163)	(277)
Losses brought forward and utilised	7	26	68
Reduction in carrying value of deferred tax asset in respect of losses in Australia	—	—	(235)
(Increase)/reduction in carrying value of deferred tax liability in respect of associates	(6)	(29)	50
Adjustments in respect of prior years (2)	14	111	(2)
Other	(37)	(15)	—
Actual tax charge	(58)	(12)	(129)

Notes:

- (1) In recent years the UK Government has steadily reduced the rate of UK corporation tax, with the latest enacted rate standing at 21% with effect from 1 April 2014 and 20% with effect from 1 April 2015. The closing deferred tax assets and liabilities have been calculated in accordance with rates enacted at the balance sheet date.
- (2) Prior period tax adjustments include the release of tax provisions on investment disposals and adjustments to reflect submitted tax computations in the Netherlands and overseas.

7 Dividends

RBS Holdings N.V. paid a dividend of €300 million during the year ended 31 December 2014 (2013 and 2012 - nil).

9 Financial instruments - valuation

Valuation of financial instruments carried at fair value

Control environment

Common valuation policies, procedures, frameworks and models apply across the RBS Group. Therefore for the most part, discussions on these aspects below reflect those in the RBS Group as relevant for businesses and operations in the RBSH Group.

RBSH Group's control environment for the determination of the fair value of financial instruments includes formalised protocols for the review and validation of fair values independent of the businesses entering into the transactions. There are specific controls to ensure consistent pricing policies and procedures, incorporating disciplined price verification. RBSH Group ensures that appropriate attention is given to bespoke transactions, structured products, illiquid products and other instruments which are difficult to price.

A key element of the control environment is the independent price verification (IPV) process. Valuations are first performed by the business which entered into the transaction. Such valuations may be directly from available prices, or may be derived using a model and variable model inputs. These valuations are reviewed, and if necessary amended, by a team independent of those trading the financial instruments, in light of available pricing evidence.

IPV differences are classified according to the quality of independent market observables into IPV quality bands linked to the fair value hierarchy principles, as laid out in IFRS 13 'Fair Value Measurement'. These differences are classified into fair value levels 1, 2 and 3 (with the valuation uncertainty risk increasing as the levels rise from 1 to 3) and then further classified into high, medium, low and indicative depending on the quality of the independent data available to validate the prices. Valuations are revised if they are outside agreed thresholds.

IPV takes place at least monthly, at month end date, for exposures in the regulatory trading book and at least quarterly for exposures in the regulatory banking book. Monthly meetings are held between the business and the support functions to discuss the results of the IPV and pricing reserves. The IPV control includes formalised reporting and escalation of any valuation differences in breach of established thresholds. The Pricing Unit determines IPV policy, monitors adherence to that policy and performs additional independent reviews of highly subjective valuation issues.

Valuation models are subject to a review process which requires different levels of model documentation, testing and review, depending on the complexity of the model and the size of RBSH Group's exposure. A key element of the control environment for model use is a Modelled Product Review Committee, made up of valuations experts from several functions within RBS Group. This committee sets the policy for model documentation, testing and review, and prioritises models with significant exposure for review by RBS Group's Pricing Model Risk team. Potential valuation uncertainty is a key input in determining model review priorities at these meetings. The Pricing Model Risk team within RBS Group Risk Management, which is independent of the trading businesses, assesses the appropriateness of the application of the model to the product, the mathematical robustness of the model, and where appropriate, considers alternative modelling approaches.

The RBS Group CIB and RCR Valuation Control Committees meet formally on a monthly basis to discuss independent pricing, reserving and valuation issues. All material methodology changes require review and ratification by these committees. The committees, which include valuation specialists representing several independent review functions, comprise Market Risk, Pricing Model Risk, Finance and senior business representatives.

The RBS Group Executive Valuation Committee discusses the issues escalated by the CIB and RCR Valuations Committees, and other relevant issues including prudential valuation. This committee covers key material and subjective valuation issues within the trading businesses and provides ratification to the appropriateness of areas with high levels of residual valuation uncertainty. Committee members include RBS Group Chief Financial Officer, RBS Group Financial Controller, RBS Group Chief Accountant and other senior members within finance and risk.

The CIB Valuation Committee operates under delegated authority of the CIB Risk Committee. The CIB Valuation Committee submits a quarterly paper covering the key areas that are governed by them to the CIB Risk Committee. Additionally, the CIB Valuation Committee may escalate items to the CIB Risk Committee on a more frequent basis as appropriate.

Market risk metrics such as value-at-risk (VaR), Incremental Risk Charge and stressed value-at-risk (SVaR) cover financial instruments in CIB and RCR. RBS Group has a framework to quantify those market risks not adequately captured by standard market risk framework such as VaR and SVaR - refer to pages 66 to 68 for details.

Valuation hierarchy

There is a process to review and control the classification of financial instruments into the three level hierarchy established by IFRS 13. Some instruments may not easily fall into a level of the fair value hierarchy and judgment may be required as to which level the instrument is classified.

Initial classification of a financial instrument is carried out by the Product Control team following the principles in IFRS 13. They base their judgment on information gathered during the IPV process for instruments which include the sourcing of independent prices and model inputs. The quality and completeness of the information gathered in the IPV process gives an indication as to the liquidity and valuation uncertainty of an instrument.

These initial classifications are reviewed and challenged by the Pricing Unit, and are also subject to senior management review. Particular attention is paid to instruments crossing from one level to another, new instrument classes or products, instruments that are generating significant profit and loss and instruments where valuation uncertainty is high.

Valuation techniques

RBSH Group derives fair value of its instruments differently depending on whether the instrument is a modelled or non-modelled product.

Non-modelled products

Non-modelled products are valued directly from a price input typically on a position by position basis and include cash, equities and most debt securities.

Notes on the consolidated accounts

9 Financial instruments - valuation continued

Modelled products

Modelled products valued using a pricing model range in complexity from comparatively vanilla products such as interest rate swaps and options (e.g. interest rate caps and floors) through to more complex derivatives. The valuation of modelled products requires an appropriate model and inputs into this model. Sometimes models are also used to derive inputs (e.g. to construct volatility surfaces). RBSH Group uses a number of modelling methodologies.

Inputs to valuation models

Values between and beyond available data points are obtained by interpolation and extrapolation. When utilising valuation techniques, the fair value can be significantly affected by the choice of valuation model and by underlying assumptions concerning factors such as the amounts and timing of cash flows, discount rates and credit risk. The principal inputs to these valuation techniques are as follows:

- Bond prices - quoted prices are generally available for government bonds, certain corporate securities and some mortgage-related products.
- Credit spreads - where available, these are derived from prices of credit default swaps or other credit based instruments, such as debt securities. For others, credit spreads are obtained from pricing services.
- Interest rates - these are principally benchmark interest rates such as the London Interbank Offered Rate (LIBOR), Overnight Index Swaps rate (OIS) and other quoted interest rates in the swap, bond and futures markets.
- Foreign currency exchange rates - there are observable markets both for spot and forward contracts and futures in the world's major currencies.
- Equity and equity index prices - quoted prices are generally readily available for equity shares listed on the world's major stock exchanges and for major indices on such shares.
- Commodity prices - many commodities are actively traded in spot and forward contracts and futures on exchanges in London, New York and other commercial centres.
- Price volatilities and correlations - volatility is a measure of the tendency of a price to change with time. Correlation measures the degree which two or more prices or other variables are observed to move together. If they move in the same direction there is positive correlation; if they move in opposite directions there is negative correlation. Volatility is a key input in valuing options and the valuation of certain products such as derivatives with multiple underlying variables that are correlation-dependent. Volatility and correlation values are obtained from broker quotations, pricing services or derived from option prices.
- Prepayment rates - the fair value of a financial instrument that can be prepaid by the issuer or borrower differs from that of an instrument that cannot be prepaid. In valuing prepayable instruments that are not quoted in active markets, RBSH Group considers the value of the prepayment option.
- Counterparty credit spreads - adjustments are made to market prices (or parameters) when the creditworthiness of the counterparty differs from that of the assumed counterparty in the market price (or parameters).
-

Recovery rates/loss given default - these are used as an input to valuation models and reserves for asset-backed securities and other credit products as an indicator of severity of losses on default. Recovery rates are primarily sourced from market data providers or inferred from observable credit spreads.

RBSH Group uses consensus prices for the IPV of some instruments. The consensus service encompasses the equity, interest rate, currency, commodity, credit, property, fund and bond markets, providing comprehensive matrices of vanilla prices and a wide selection of exotic products. CIB and RCR contribute to consensus pricing services where there is a significant interest either from a positional point of view or to test models for future business use. Data sourced from consensus pricing services is used for a combination of control processes including direct price testing, evidence of observability and model testing. In practice this means that the RBSH Group submits prices for all material positions for which a service is available. Data from consensus services are subject to the same level of quality review as other inputs used for IPV process

In order to determine a reliable fair value, where appropriate, management applies valuation adjustments to the pricing information gathered from the above sources. The sources of independent data are reviewed for quality and are applied in the IPV processes using formalised input quality hierarchy. These adjustments reflect RBSH Group's assessment of factors that market participants would consider in setting a price.

Furthermore, on an ongoing basis, RBSH Group assesses the appropriateness of any model used. To the extent that the price determined by internal models does not represent the fair value of the instrument, for instance in highly stressed market conditions, RBSH Group makes adjustments to the model valuation to calibrate to other available pricing sources. Where unobservable inputs are used, RBSH Group may determine a range of possible valuations derived from differing stress scenarios to determine the sensitivity associated with the valuation.

When establishing the fair value of a financial instrument using a valuation technique, RBSH Group considers certain adjustments to the modelled price which market participants would make when pricing that instrument. Such adjustments include the credit quality of the counterparty and adjustments to compensate for any known model limitations.

Credit valuation adjustments

Credit valuation adjustments (CVA) represent an estimate of the adjustment to fair value that a market participant would make to incorporate the risk inherent in counterparty derivative exposures.

Notes on the consolidated accounts

Own credit

RBSH Group takes into account the effect of its own credit standing when valuing financial liabilities recorded at fair value in accordance with IFRS. Own credit spread adjustments are made to issued debt held at fair value, including issued structured notes, and derivatives. An own credit adjustment is applied to positions where it is believed that counterparties would consider RBSH Group's creditworthiness when pricing trades.

For issued debt and structured notes this adjustment is based on debt issuance spreads above average inter-bank rates (at a range of tenors). Secondary senior debt issuance spreads are used in the calculation of the own credit adjustment applied to senior debt.

The fair value of RBSH Group's derivative financial liabilities is adjusted to reflect RBSH Group's own credit risk (DVA). Expected gains are applied to estimated potential future negative exposures, the modelling of which is consistent with the approach used in calculation of CVA relating to other counterparties. Expected gains are determined from market implied probabilities of default and recovery levels. Funding valuation adjustments (FVA) is also now considered the primary adjustment applied to derivative liabilities; the extent to which DVA and FVA overlap is eliminated from DVA.

The own credit adjustment for fair value does not alter cash flows, is not used for performance management, is disregarded for regulatory capital reporting processes and will reverse over time as the liabilities mature.

The reserve movement between periods will not equate to the reported profit or loss for own credit. The balance sheet reserves are stated by conversion of underlying currency balances at spot rates for each period whereas the income statement includes intra-period foreign exchange sell-offs.

The effect of change in credit spreads could reverse in future periods provided the liability is not repaid at a premium or a discount.

The cumulative own credit adjustments on own liabilities are set out below.

	Debt securities in issue and subordinated liabilities		Derivatives	Total	
	(1)				
Cumulative own credit adjustment (decrease)/increase in liability	€m		€m	€m	
2014	(212)	(5) (217)
2013	(230)	(13) (243)
2012	(344)	(24) (368)
Book values of underlying liabilities	€bn				
2014	1.3				
2013	1.4				
2012	2.2				

Note:

(1) Includes wholesale and retail note issuances.

Notes:

(1) Level 1: valued using unadjusted quoted prices in active markets, for identical financial instruments.

Level 2: valued using techniques based significantly on observable market data. Instruments in this category are valued using:

- (a) quoted prices for similar instruments or identical instruments in markets which are not considered to be active; or
- (b) valuation techniques where all the inputs that have a significant effect on the valuations are directly or indirectly based on observable market data.

Level 3: instruments in this category have been valued using a valuation technique where at least one input which could have a significant effect on the instrument's valuation, is not based on observable market data. Where inputs can be observed from market data without undue cost and effort, the observed input is used. Otherwise, RBSH Group determines a reasonable level for the input.

(2) Sensitivity represents the favourable and unfavourable effect on the income statement or the statement of comprehensive income due to reasonably possible changes to valuations using reasonably possible alternative inputs to RBSH Group's valuation techniques or models. Totals for sensitivities are not indicative of the total potential effect on the income statement or the statement of comprehensive income. The level 3 sensitivities above are calculated at a trade or low level portfolio basis. They are not calculated on an overall portfolio basis and therefore do not reflect the likely overall potential uncertainty on the whole portfolio. The figures are aggregated

and do not reflect the correlated nature of some of the sensitivities. In particular, for some of the portfolios the sensitivities may be negatively correlated where a downwards movement in one asset would produce an upwards movement in another, but due to the additive presentation of the above figures this correlation cannot be observed. The actual potential downside sensitivity of the total portfolio may be less than the non-correlated sum of the additive figures as shown in the above table.

- (3) Transfers between levels are deemed to have occurred at the beginning of the quarter in which the instruments were transferred. There were no significant transfers between level 1 and level 2.
- (4) RBSH Group does not have any material liabilities measured at fair value that are issued with an inseparable third party credit enhancement.
- (5) Level 3 instruments were €0.2 billion for both assets and liabilities (2013 - €0.4 billion assets and liabilities; 2012 - €0.6 billion assets and €0.5 billion liabilities). 2014 - the decrease during the year primarily related to €0.2 billion sales for both assets and liabilities and income statement losses of €0.1 billion on assets and gains of €0.1 billion on liabilities. Transfers from level 2 to 3 were €66 million assets and €33 million liabilities. There were no material transfers from level 3 to level 2. Amounts recognised in other comprehensive income were not material. 2013 - the decrease during the year primarily related to transfer to disposal groups and sales of €0.3 billion assets and liabilities, transfers from level 2 to level 3 of €0.3 billion liabilities, asset purchases of €0.2 billion and losses of €0.1 billion on assets recognised in the income statement. There were no material transfers from level 3 to level 2. Amounts recognised in other comprehensive income were not material. 2012 - the decrease during the year primarily related to transfer to disposal groups and sales of €1.1 billion for assets and €0.2 billion for liabilities, settlements of €0.3 billion on assets and €0.5 billion on liabilities, and income statement gains of €0.1 billion on assets and Income statement losses of €0.1 billion on liabilities. There were no material transfers in or out of Level 3. Amounts recognised in other comprehensive income were not material. The amount of the total gains or losses included in profit or loss that is attributable to the change in unrealised gains or losses relating to these assets and liabilities held at the end of the reporting period was not material for any period presented.
- (6) For an analysis of derivatives by type of contract –see note 12.

Notes on the consolidated accounts

9 Financial instruments - valuation continued

The Level 3 sensitivities above are calculated at a trade or low level portfolio basis. They are not calculated on an overall portfolio basis and therefore do not reflect the likely potential uncertainty on the portfolio as a whole. The figures are aggregated and do not reflect the correlated nature of some of the sensitivities. In particular, for some of the portfolios the sensitivities may be negatively correlated where a downwards movement in one asset would produce an upwards movement in another, but due to the additive presentation of the above figures this correlation cannot be displayed. The actual potential downside sensitivity of the total portfolio may be less than the non-correlated sum of the additive figures as shown in the above table.

Judgmental issues

The diverse range of products traded by RBSH Group results in a wide range of instruments that are classified into Level 3 of the hierarchy. Whilst the majority of these instruments naturally fall into a particular level, for some products an element of judgement is required. The majority of RBSH Group's financial instruments carried at fair value are classified as Level 2: inputs are observable either directly (i.e. as a price) or indirectly (i.e. derived from prices).

Active and inactive markets

A key input in the decision making process for the allocation of assets to a particular level is liquidity. In general, the degree of valuation uncertainty depends on the degree of liquidity of an input

Where markets are liquid or very liquid, little judgement is required. However, when the information regarding the liquidity in a particular market is not clear, a judgement may need to be made. This can be made more difficult as assessing the liquidity of a market is not always straightforward. For an equity traded on an exchange, daily volumes of trading can be seen, but for an-over-the-counter (OTC) derivative assessing the liquidity of the market with no central exchange can be more difficult.

A key related issue is where a market moves from liquid to illiquid or vice versa. Where this change is considered to be temporary, the classification is not changed. For example, if there is little market trading in a product on a reporting date but at the previous reporting date and during the intervening period the market has been considered to be liquid, the instrument will continue to be classified in the same level in the hierarchy. This is to provide consistency so that transfers between levels are driven by genuine changes in market liquidity and do not reflect short term or seasonal effects.

Interaction with the IPV process

The determination of an instrument's level cannot be made at a global product level as a single product type can be in more than one level. For example, a single name corporate credit default swap could be in Level 2 or Level 3 depending on whether the reference counterparty is liquid or illiquid.

As part of RBSH Group's IPV process, data are gathered at a trade level from market trading activity, trading systems, pricing services, consensus pricing providers, brokers and research material amongst other sources.

The breadth and depth of the IPV data allows for a rules based quality assessment to be made of market activity, liquidity and pricing uncertainty, which assists with the process of allocation to an appropriate level. Where suitable independent pricing information is not readily available the instrument will be considered to be Level 3.

Modelled products

For modelled products the market convention is to quote these trades through the model inputs or parameters as opposed to a cash price equivalent. A mark-to-market is derived from the use of the independent market inputs calculated using RBSH Group's model.

The decision to classify a modelled asset as Level 2 or 3 will be dependent upon the product/model combination, the currency, the maturity, the observability and quality of input parameters and other factors. All these need to be assessed to classify the asset.

An assessment is made of each input into a model. There may be multiple inputs into a model and each is assessed in turn for observability and quality. As part of the process of classifying the quality of IPV results the IPV quality classifications have been designed to follow the accounting level classifications, although with a further level of granularity. For example there are a number of different IPV quality levels that equate to a Level 2 classification and so on.

If an input fails the observability or quality tests then the instrument is considered to be in Level 3 unless the input can be shown to have an insignificant effect on the overall valuation of the product.

The majority of derivative instruments, for example, vanilla interest rate swaps, foreign exchange swaps and liquid single name credit derivatives are classified as Level 2 as they are vanilla products valued using observable inputs. The valuation uncertainty on these is considered to be low and both input and output testing may be available.

Non-modelled products

Non-modelled products are generally quoted on a price basis and can therefore be considered for each of the three levels. This is determined by the market activity liquidity and valuation uncertainty of the instruments which is in turn measured from the availability of independent data used by the IPV process to allocate positions to IPV quality levels.

The availability and quality of independent pricing information is considered during the classification process. An assessment is made regarding the quality of the independent information. For example where consensus prices are used for non-modelled products, a key assessment of the quality of a price is the depth of the number of prices used to provide the consensus price. If the depth of contributors falls below a set hurdle rate, the instrument is considered to be Level 3. This hurdle rate is that used in the IPV process to determine the IPV quality rating. However, where an instrument is generally considered to be illiquid, but regular quotes from market participants exist, these instruments may be classified as Level 2 depending on frequency of quotes, other available pricing and whether the quotes are used as part of the IPV process or not.

Notes on the consolidated accounts

For some instruments with a wide number of available price sources, there may be differing quality of available information and there may be a wide range of prices from different sources. In these situations the highest quality source is used to determine the classification of the asset. For example, a tradable quote would be considered a better source than a consensus price.

Level 3 portfolios and sensitivity methodologies

Reasonably possible alternative assumptions of unobservable inputs are determined based on a 90% confidence interval. The assessments recognise different favourable and unfavourable valuation movements where appropriate. Each unobservable input within a product is considered separately and sensitivity is reported on an additive basis.

Alternative assumptions are determined with reference to all available evidence including consideration of the following: quality of independent pricing information taking into account consistency between different sources, variation over time, perceived tradability or otherwise of available quotes; consensus service dispersion ranges; volume of trading activity and market bias (e.g. one-way inventory); day 1 profit or loss arising on new trades; number and nature of market participants; market conditions; modelling consistency in the market; size and nature of risk; length of holding of position; and market intelligence.

Other considerations

Valuation adjustments

CVA applied to derivative exposures to other counterparties and own credit adjustments applied to derivative liabilities (DVA) are calculated on a portfolio basis. Whilst the methodology used to calculate each of these adjustments references certain inputs which are not based on observable market data, these inputs are not considered to have a significant effect on the net valuation of the related portfolios. The classification of the derivative portfolios which the valuation adjustments are applied to is not determined by the observability of the valuation adjustments, and any related sensitivity does not form part of the Level 3 sensitivities presented.

Own credit - issued debt

For structured notes issued the own credit adjustment is based on debt issuance spreads above average inter-bank rates at the reporting date (at a range of tenors). Whilst certain debt issuance spreads are not based on observable market data, these inputs are not considered to have a significant effect on the valuation of individual trades. Neither the classification of structured notes issued nor any related valuation sensitivities are determined by the observability of the debt issuance spreads.

Settlement balances	73	73
Subordinated liabilities	6,127	5,700

The fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Quoted market values are used where available; otherwise, fair values have been estimated based on discounted expected future cash flows and other valuation techniques. These techniques involve uncertainties and require assumptions and judgments covering prepayments, credit risk and discount rates. Furthermore there is a wide range of potential valuation techniques. Changes in these assumptions would significantly affect estimated fair values. The fair values reported would not necessarily be realised in an immediate sale or settlement.

The assumptions and methodologies underlying the calculation of fair values of financial instruments at the balance sheet date are as follows:

Short-term financial instruments

For certain short-term financial instruments: cash and balances at central banks, items in the course of collection from other banks, settlement balances, items in the course of transmission to other banks, demand deposits and notes in circulation, fair value approximates to carrying value.

Loans and advances to banks and customers

In estimating the fair value of loans and advances to banks and customers measured at amortised cost, RBSH Group's loans are segregated into appropriate portfolios reflecting the characteristics of the constituent loans. Two principal methods are used to estimate fair value:

- (a) Contractual cash flows are discounted using a market discount rate that incorporates the current spread for the borrower or where this is not observable, the spread for borrowers of a similar credit standing. This method is used for the majority of CIB portfolios where most counterparties have external ratings.
- (b) Expected cash flows (unadjusted for credit losses) are discounted at the current offer rate for the same or similar products. This approach is adopted for lending portfolios reflecting the more homogeneous nature of these portfolios.

Debt securities

The majority of debt securities are valued using quoted prices in active markets or using quoted prices for similar assets in active markets.

Fair values are determined using discounted cash flow valuation techniques.

Deposits by banks and customer accounts

Fair values of deposits are estimated using discounted cash flow valuation techniques.

Debt securities in issue and subordinated liabilities

Fair values are determined using quoted prices for similar liabilities where available or by reference to valuation techniques and adjusting for own credit spreads where appropriate.

Notes on the consolidated accounts

10 Financial instruments-maturity analysis

Remaining maturity

The following table shows the residual maturity of financial instruments, based on contractual date of maturity.

	2014			2013			2012

Notes on the consolidated accounts

10 Financial instruments - maturity analysis continued

Assets and liabilities by contractual cash flow maturity

The tables on the following page show the contractual undiscounted cash flows receivable and payable, up to a period of 20 years, including future receipts and payments of interest of on-balance sheet assets by contractual maturity. The balances in the following tables do not agree directly with the consolidated balance sheet, as the tables include all cash flows relating to principal and future coupon payments, presented on an undiscounted basis. The tables have been prepared on the following basis:

Financial assets have been reflected in the time band of the latest date on which they could be repaid, unless earlier repayment can be demanded by the RBSH Group. Financial liabilities are included at the earliest date on which the counterparty can require repayment, regardless of whether or not such early repayment results in a penalty.

If the repayment of a financial instrument is triggered by, or is subject to, specific criteria such as market price hurdles being reached, the asset is included in the time band that contains the latest date on which it can be repaid, regardless of early repayment. The liability is included in the time band that contains the earliest possible date on which the conditions could be fulfilled, without considering the probability of the conditions being met.

For example, if a structured note is automatically prepaid when an equity index exceeds a certain level, the cash outflow will be included in the less than three months period, whatever the level of the index at the year end. The settlement date of debt securities in issue, issued by certain securitisation vehicles consolidated by the RBSH Group, depends on when cash flows are received from the securitised assets. Where these assets are prepayable, the timing of the cash outflow relating to securities assumes that each asset will be prepaid at the earliest possible date. As the repayments of assets and liabilities are linked, the repayment of assets in securitisations is shown on the earliest date that the asset can be prepaid, as this is the basis used for liabilities.

The principal amounts of financial assets and liabilities that are repayable after 20 years or where the counterparty has no right to repayment of the principal are excluded from the table, as are interest payments after 20 years.

Held-for-trading assets and liabilities - held-for-trading assets of €5.3 billion (2013 - €6.6 billion; 2012 - €11.2 billion) and liabilities of €5.5 billion (2013 - €6.2 billion; 2012 - €9.3 billion) have been excluded from the tables below in view of their short-term nature.

	2014	2013	2012
Guarantees and commitments notional amount	€m	€m	€m
Guarantees (1)	5,694	6,884	10,070
Commitments (2)	921	972	5,706
	6,615	7,856	15,776

Notes:

- (1) RBSH Group is only called upon to satisfy a guarantee when the guaranteed party fails to meet its obligations. RBSH Group expects most guarantees it provides to expire unused.
- (2) RBSH Group has given commitments to provide funds to customers under undrawn formal facilities, credit lines and other commitments to lend subject to certain conditions being met by the counterparty. RBSH Group does not expect all facilities to be drawn, and some may lapse before drawdown.

11 Financial assets - impairments

The following table shows the movement in the provision for impairment losses for loans and advances.

RBSH Group holds collateral in respect of certain loans and advances to banks and to customers that are past due or impaired. Such collateral includes mortgages over property; charges over business assets such as plant, inventories and trade debtors; and guarantees of lending from parties other than the borrower.

No loans have been subject to forbearance in the past 12 months that would otherwise have been past due or impaired (2013 and 2012 - nil).

12 Derivatives

Companies in RBSH Group transact derivatives as principal either as a trading activity or to manage balance sheet foreign exchange, interest rate and credit risks.

RBSH Group enters into fair value hedges, cash flow hedges and hedges of net investments in foreign operations. The majority of RBSH Group's interest rate hedges relate to the management of RBSH Group's non-trading interest rate risk. RBSH Group manages this risk within approved limits. Residual risk positions are hedged with derivatives principally interest rate swaps. Suitable larger ticket financial instruments are fair value hedged and qualifying for hedge accounting. The majority of RBSH Group's fair value hedges involve interest rate swaps hedging the interest rate risk in recognised financial assets and financial liabilities. RBSH Group hedges its net investments in foreign operations with currency borrowings and forward foreign exchange contracts.

For fair value hedge relationships of interest rate risk, the hedged items are typically large corporate fixed-rate loans, fixed-rate finance leases, fixed-rate medium-term notes or preference shares classified as debt.

The initial and ongoing prospective effectiveness of fair value hedge relationships is assessed on a cumulative basis by comparing movements in the fair value of the hedged item attributable to the hedged risk with changes in the fair

value of the hedging interest rate swap or by comparing the respective changes in the price value of a basis point. Retrospective effectiveness is assessed by comparing the actual movements in the fair value of the hedged items attributable to the hedged risk with actual movements in the fair value of the hedging derivative over the life to date of the hedging relationship.

Net gains of €2 million (2013 - €17 million; 2012 - €99 million) were realised on the sale of available-for-sale equity shares.

Dividend income from available-for-sale equity shares was €4.6 million (2013 - €0.2 million; 2012 - €4 million).

Notes on the consolidated accounts

15 Interests in associates

RBSH Group has one significant associate, Saudi Hollandi Bank (SHB) which is incorporated and has its principal place of business in the Kingdom of Saudi Arabia. The RBSH Group holds 40% of SHB's shares. It is accounted for using the equity method. RBSH Group does not influence the significant judgements and assumptions made by SHB in the preparation of their financial statements.

At 31 December 2013, RBS N.V. held 38% of the shares of Alcover AG ('Alcover') accounted for as an associate with a carrying value of €59 million. On 2 July 2014, RBS N.V. acquired the remaining 62% of Alcover shares from the other Consortium Members for consideration of €99 million. The acquisition date fair value of Alcover's net assets was €160 million principally: debt securities (€342 million); cash and cash equivalents (€71 million); less insurance claims reserves (€241 million). There was no attributable goodwill. Alcover is consolidated by RBS N.V.; its profit since acquisition was €2 million. Alcover's insurance business is in run-off. Claims reserves represent the risk-adjusted cash outflows required to settle outstanding claims as they develop. These reserves are established on the basis of an external actuarial valuation and reflect historical claims experience.

All Dutch State acquired businesses are classified as discontinued operations. Following the successful demerger of the majority of the Dutch State acquired businesses into the new ABN AMRO Bank on 6 February 2010, these businesses met the IFRS requirements of a disposal group held for sale. Legal separation of the new ABN AMRO Bank occurred on 1 April 2010 through a sale of the shares in that entity by RBS Holdings N.V. to a holding company called ABN AMRO Group N.V., a newly incorporated entity owned by the Dutch State. The gain on sale for the Dutch State acquired businesses was included within the distribution paid to RFS Holdings, in favour of the Dutch State. This disposal group represented a major line of business and therefore results for the period are presented as results from discontinued operations as a single line item in the consolidated income statement with prior period amounts re-presented. Profits from discontinued operations include the related operating results and if applicable the gain on sale.

(b) Assets and liabilities of disposal groups

	2014	2013	2012
	€m	€m	€m
Assets of disposal groups			
Cash and balances at central banks	—	6	3,565
Loans and advances to banks	—	134	1,278
Loans and advances to customers	1,213	1,328	3,240
Debt securities and equity shares	—	379	2,909
Derivatives	—	154	1,932
Other assets	44	47	880
	1,257	2,048	13,804
Liabilities of disposal groups			
Deposits by banks	—	—	865
Customer accounts	42	205	7,468
Derivatives	—	127	1,902
Other liabilities	4	75	791
	46	407	11,026

As at 31 December 2014, assets and liabilities of disposal groups related mainly to the remaining Dutch State acquired businesses.

As at 31 December 2013, the assets and liabilities of disposal groups related mainly to the Thai business; other assets and liabilities related to certain loan portfolios in the Latin American region, remaining Private Equity portfolios within the Non-Core segment, and the remaining Dutch State acquired businesses.

As at 31 December 2012, the assets and liabilities of disposal groups represented balances of a number of businesses in the Asian region, loan portfolios in the Latin American region and remaining Private Equity portfolios within the Non-Core segment, as well as the remaining Dutch State acquired businesses.

In accordance with the classification of financial instruments in IAS 39, cash and balances at central banks, loans and advances to banks and to customers, deposits by banks and customer accounts and settlement balances included within assets and liabilities of disposal groups are classified as financial instruments at amortised cost. Derivatives included within assets and liabilities of disposal groups are classified as held-for-trading and measured at fair value. The majority of debt securities and equity shares within assets of disposal groups are either classified as held-for-trading (2013 - €29 million and 2012 - €618 million) or as available-for-sale (2013 - €161 million and 2012 - €1,433 million) and are measured at fair value. The majority of financial instruments carried at fair value within assets and liabilities of disposal groups at 31 December, 2013 and 2012 are classified as level 2.

Notes on the consolidated accounts

18 Settlement balances and short positions

	2014	2013	2012
	€m	€m	€m
Settlement balances (amortised cost)	32	83	73
Short positions (held-for-trading):

Releases to income statement	(4)	(8)	(4)
Provisions utilised	(207)	—	—
At 31 December 2014	47	4	75

Other provisions include tax provisions and other provisions arising in the normal course of business.

Arising out of its normal business operations, RBSH Group is party to legal proceedings in the Netherlands, United Kingdom, the United States of America and other jurisdictions. Litigation provisions at 31 December 2014 related to numerous proceedings; no individual provision is material. Detailed descriptions of the Group's legal proceedings and discussion of the associated uncertainties are given in Note 26.

At 31 December 2014 (2)	(1)	(1)	(10)	77	3	—	(1)	—	(13)	54

Note:

- (1) Predominantly relates to losses incurred on UK businesses which were transferred to RBS plc. Under UK tax rules the associated tax losses move to RBS plc as the businesses transfer. RBS Group reimbursed RBSH Group for the value of the losses attached to the transferring businesses. No tax losses were transferred in 2014 (2013: €1.4 billion of tax losses transferred; 2012: nil)
- (2) Other deferred tax assets are recognised, that depend on the availability of future taxable profits in excess of profits arising from the reversal of other temporary differences. Tax losses in the Netherlands can be carried forward for up to nine years, however business projections prepared for impairment review indicate it is probable that insufficient future taxable income will be available against which to offset these recognised deferred tax assets in respect of the unused tax losses. Therefore these tax assets have been fully impaired. For the remaining deferred tax assets, business projections prepared for impairment reviews indicate that it is probable that sufficient future taxable income will be available against which to offset these recognised deferred tax assets. In jurisdictions where doubt exists over the availability of future taxable profits, deferred tax assets of €2,259 million (2013 - €2,492 million; 2012 - €2,930 million) have not been recognised in respect of tax losses carried forward of €9,242 million (2013 - €10,052 million; 2012 - €11,796 million). Of these losses, none will expire within one year, €5,302 million within five years and €2,604 million thereafter. The balance of tax losses carried forward has no time limit.

Notes on the consolidated accounts

21 Subordinated liabilities

	2014	2013	2012
	€m	€m	€m
Dated loan capital	2,379	2,586	4,417
Undated loan capital	2,725	2,365	2,434
	5,104	4,951	6,851

RBS N.V. has now resumed payments on all discretionary non-equity capital instruments following the end of the European Commission ban in 2013. Future coupons and dividends on hybrid capital instruments will only be paid subject to, and in accordance with, the terms of the relevant instruments.

The following tables analyse the remaining contractual maturity of subordinated liabilities by the final redemption date; and by the next call date.

	2015	2016	2017-2019	2020-2024	Thereafter	Perpetual	Total
