Portfolio Review

The market continued to decline in June as the Taiwan Stock Exchange Index (TAIEX) fell 3.2% in US dollar terms during the month after May's 2.6% decline. The market's weakness in June was directly attributable to the weakness of the technology sector caused by weak demands, expected weak sales figures and reported rising inventories of distributors. Concerns of disappointed earnings in the second quarter caused institutions to unload their shares. The technology sector performed poorly by declining of 5.6% during the month, with Thin Film Transistor-Liquid Crystal Display (TFT-LCD) related companies being hit by strong selling pressure from institutional investors looking to reduce their exposure in the technology sector. Integrated Circuit (IC) design companies and handset-related shares suffered for the same reason and underperformed the overall market, but telecom operators outperformed, as they provide a rich cash yield even during a down cycle. On the other hand, transportation, steel and materials outperformed the market in June with performance of +3.9%, +6.5% and +7.5%, respectively. The Fund underperformed the index by 0.5% during the month mainly because we overweight the higher beta cyclical growth sector, which suffered most from the market declining phase in June.

Taiwan's GDP growth may slow down from 6.7% in the second quarter to 4.6% in the third quarter due to a slower Chinese economy in the second half and weaker year on year earnings growth momentum from various industries. Other concerns include U.S. corporate profit warnings, technology product inventory build up, and the possible peaking of industrial cyclicals as a result of China's cooling measures. Considering the above factors, the market has declined in the past two months. However, the market may have overly discounted the upcoming slowdown, especially following the announcement of China's austerity control policy, and therefore dampened investor's sentiment during the technology slow season.

Looking ahead, the market may range trade in the coming weeks. The upside might be constrained due to the following concerns: slow activities from institutional investors, new supply from bonus shares, and uncertainty of the second quarter corporate earnings. However, the market downside may be less than 5% considering the cheap valuation (hardware are trading at single digit price to earnings ratio, foundry shares are trading at their lowest price to book value ratio in the past five years) and the expected continuation of healthy corporate earnings in 2004. The market may move again after mid-August when back to school demand kicks in associated with the upcoming peak season of consumer spending in the fourth quarter. In addition, possible foreign funds inflow after MSCI re-weighting of the Taiwan market is considered a positive factor for the market. For MSCI re-weighting, major beneficiaries will be large caps and under-owned mid-caps. With the abundant market liquidity, we believe there is a good chance that the market may rise to 6,200 levels before the year-end. We are confident in consumer electronics as those companies may benefit from increasing consumer spending in the fourth quarter. The financial sector also looks positive as it may benefit from rising interest spreads, enhancing asset quality and further consolidation among banks. Considering the cheap valuation of the market and upcoming technology sector peak season, our portfolio strategy will be continue to hold overweight positions in technology and to remain underweight in industrial sectors in the coming months. In the mid-term, we may reduce the high beta sector weighting on rebound and shift the weighting to the finance sector before the year-end.

Total Fund Sector Allocation

As of 06/30/04	% of Total Fund	% of TAIEX
Semiconductor	21.10	19.79

*Returns for the Fund are historical total returns that reflect changes in net asset value per share during each period and assume that dividends and capital gains, if any, were reinvested. Returns for the TAIEX are not total returns and reflect only changes in share price but do not assume that cash dividends, if any, were reinvested, and thus are not strictly comparable to the Fund returns. Past performance is not indicative of future results of the Fund. Returns are annualized, except for periods of less than one year which are not annualized.

** The Fund's fiscal year commences on September 1.

Table of Contents

*** Due to a U.S. holiday on May 31, the beginning date for The Taiwan Fund, Inc. total return is May 28, while the beginning date for the TAIEX return is May 31 in the above table. NAV returns are calculated from May 28 to June 30, while the index return is calculated from May 31 to June 30. On an equally comparable basis (both The Taiwan Fund, Inc. NAV return and TAIEX return are calculated from May 28 to June 30), the one month return for The Taiwan Fund, Inc. should be -6.17%, while the TAIEX return for the same period should be -5.69%.
