Page 6

Notes to Condensed Consolidated Financial Statements (unaudited)

NOTE 1 — Accounting Policies

The condensed consolidated financial statements include the accounts of Cincinnati Financial Corporation and its consolidated subsidiaries, each of which is wholly owned. These statements are presented in conformity with accounting principles generally accepted in the United States of America (GAAP). All intercompany balances and transactions have been eliminated in consolidation.

The preparation of financial statements in conformity with GAAP requires us to make estimates and assumptions that affect amounts reported in the financial statements and accompanying notes. Our actual results could differ from those estimates. The December 31, 2010, condensed consolidated balance sheet amounts are derived from the audited financial statements but do not include all disclosures required by GAAP.

Our September 30, 2011, condensed consolidated financial statements are unaudited. Certain financial information that is included in annual financial statements prepared in accordance with GAAP is not required for interim reporting and has been condensed or omitted. We believe that we have made all adjustments, consisting only of normal recurring accruals, that are necessary for fair presentation. These condensed consolidated financial statements should be read in conjunction with our consolidated financial statements included in our 2010 Annual Report on Form 10-K. The results of operations for interim periods do not necessarily indicate results to be expected for the full year.

Adopted Accounting Updates

ASU 2010-06, Fair Value Measurements and Disclosures

In January 2010, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2010-06, Fair Value Measurements and Disclosures. ASU 2010-06 applies to all entities that are required to make disclosures about recurring or nonrecurring fair value measurements. ASU 2010-06 requires separate disclosures of the activity in the Level 3 category related to any purchases, sales, issuances and settlements on a gross basis. The effective date of these separate disclosures is for interim and annual periods beginning after December 15, 2010. This portion of ASU 2010-06 does not have a material impact on our company's financial position, cash flows or results of operations as it focuses on additional disclosures.

ASU 2010-15, How Investments Held through Separate Accounts Affect an Insurer's Consolidation Analysis of Those Investments

In April 2010, the FASB issued ASU 2010-15, How Investments Held through Separate Accounts Affect an Insurer's Consolidation Analysis of Those Investments. ASU 2010-15 applies to all insurance entities that have separate accounts that meet the definition and requirements set forth in the Accounting Standards Codification Manual. ASU 2010-15 clarifies that an insurance entity should not consider any separate account interests held for the benefit of contract holders in an investment to be the insurer's interests. The insurance entity should not combine those interests with its general account interest in the same investment when assessing the investment for consolidation. The insurance entity may combine those interests when the separate account interests are held for the benefit of a related-party policyholder as defined in the Variable Interest Subsections of the Consolidation topic in the Codification Manual. The effective date of the amendments in this update is for interim and annual periods beginning after December 15, 2010, with early adoption permitted. The amendments in this update do not modify the disclosures currently required by GAAP and do not have a material impact on our company's financial position, cash flows or results of operations.

Pending Accounting Updates

ASU 2010-26, Accounting for Costs Associated with Acquiring or Renewing Insurance Contracts

In October 2010, the FASB issued ASU 2010-26, Accounting for Costs Associated with Acquiring or Renewing Insurance Contracts. ASU 2010-26 modifies the definitions of the type of costs incurred by insurance entities that can be capitalized in the successful acquisition of new and renewal contracts. ASU 2010-26 requires capitalization of incremental direct costs of successful contract acquisition as well as certain costs related to underwriting, policy issuance and processing, medical and inspection and sales force contract selling for successful contract acquisition. These incremental direct costs and other costs are those that are essential to the contract transaction and would not have been incurred had the contract transaction not occurred. The effective date of ASU 2010-26 is for interim and annual reporting periods beginning after December 15, 2011. We plan to adopt ASU 2010-26 retrospectively. We estimate that at September 30, 2011, approximately \$100 million of the total \$512 million deferred acquisition costs asset is subject to further analysis to determine what can continue to be capitalized. We estimate \$35-65 million of the \$100 million may relate to successful acquisition of new and renewal contracts and will be deferrable and capitalized. The ASU has not yet been adopted, and we will report at December 31, 2011, the impact it will have on our company's financial position, cash flows or results of operations.

ASU 2011-04, Fair Value Measurements, Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRS

In May 2011, the FASB issued ASU 2011-04, Fair Value Measurements, Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and International Financial Reporting Standards (IFRS). The ASU converges fair value measurement and disclosures among U.S. GAAP and IFRS. ASU 2011-04 changes certain fair value measurement principles and expands disclosure requirements, particularly for Level 3 inputs. The ASU is effective for interim and annual periods beginning after December 15, 2011, and should be applied prospectively. The ASU has not yet been adopted and will not have a material impact on our company's financial position, cash flows or results of operations.

ASU 2011-05, Presentation of Comprehensive Income

In June 2011, the FASB issued ASU 2011-05, Presentation of Comprehensive Income. ASU 2011-05 requires entities to present the total of comprehensive income, the components of net income, and the components of other comprehensive income either in a single continuous statement of comprehensive income or in two separate but consecutive statements. The ASU is effective for interim and annual reporting periods beginning after December 15, 2011, and should be applied prospectively. The ASU has not yet been adopted and will not have a material impact on our company's financial position, cash flows or results of operations, as it relates to modified presentation of existing financial statements.

NOTE 2 – Investments

Fixed maturities (bonds and redeemable preferred stocks) and equity securities (common and non-redeemable preferred stocks) have been classified as available for sale and are stated at fair values at September 30, 2011, and December 31, 2010. Realized gains and losses on investments are recognized in earnings on a specific identification basis.

The change in unrealized gains and losses, net of taxes, described in the following table, is included in other comprehensive income and shareholders' equity.

(In millions)	Three months ended September 30,		Nine months ended September 30,	
	2011	2010	2011	2010
Change in unrealized gains and losses summary:				
Fixed maturities	\$ 76	\$ 198	\$ 180	\$ 407
Equity securities	(379)	85	(278)	(105)
Adjustment to deferred acquisition costs and life policy reserves	(7)	(11)	(11)	(18)

Preferred equities	75	27	1	101	
Subtotal	2,286	784	29	3,041	NA
Total	\$ 10,174	\$ 1,299	\$ 49	\$ 11,424	

The unrealized investment gains at September 30, 2011, were largely due to a net gain position in our fixed maturity portfolio of \$675 million and a net gain position in our common stock portfolio of \$452 million. The net unrealized investment gains in our fixed maturity portfolio are primarily composed of \$455 million in unrealized gains from the corporate bond portfolio and \$219 million in net unrealized gains from the municipal bond portfolio. The primary contributors to the net gain position in the common stock portfolio were Exxon Mobil Corporation (NYSE:XOM), The Procter & Gamble Company (NYSE:PG) and Chevron Corporation (NYSE:CVX) common stock, which had a combined net gain position of \$251 million.

Of the 182 holdings with fair value below cost or amortized cost at September 30, 2011, the three largest contributors to the \$115 million unrealized losses were equity securities. The fair value of these three securities was \$125 million, and they accounted for \$55 million in unrealized losses. Two securities have traded below cost for less than six

months. One security has traded below cost for less than nine months.

Management reviews quantitative measurements such as a declining trend in fair value, the extent of the fair value decline and the length of time the value of the security has been depressed, as well as qualitative measures such as pending events, credit ratings and issuer liquidity when analyzing for other-than-temporary declines in value.

Non-cash charges to income, as realized investment losses, are recorded when it is determined the value will not be recovered within a designated recovery period.

At September 30, 2011, we had \$69 million fair value of hybrid securities included in fixed maturities that follow ASC 815-15-25, Accounting for Certain Hybrid Financial Instruments. The hybrid securities are carried at fair value, and the changes in fair value are included in realized investment gains and losses.

The table below provides fair values and unrealized losses by investment category and by the duration of the securities' continuous unrealized loss position:

(In millions)	Less than 12 months		12 months or more		Total	
	Fair value	Unrealized losses	Fair value	Unrealized losses	Fair value	Unrealized losses
At September 30, 2011						
Fixed maturities:						
States, municipalities and political subdivisions	\$ 17	\$ 1	\$ 6	\$ -	\$ 23	\$ 1
United States government	1	-	-	-	1	-
Government-sponsored enterprises	70	-	-	-	70	-

Subtotal	342	28	23	1	365	29
Total	\$ 1,154	\$ 44	\$ 71	\$ 5	\$ 1,225	\$ 49

For the three months ended September 30, 2011, the net realized loss of \$2 million includes \$19 million in gross realized gains and \$17 million in gross realized losses from sales of securities. For the three months ended September 30, 2010, the net realized gain of \$155 million includes \$148 million in gross realized gains and less than \$1 million in gross realized losses from sales of securities. For the nine months ended September 30, 2011, the net realized gain of \$77 million includes \$136 million in gross realized gains and \$35 million in gross realized losses from sales of securities. For the nine months ended September 30, 2010, the net realized gain of \$140 million includes \$177 million in gross realized gains and \$12 million in gross realized losses from sales of securities.

Other-than-temporary Impairment Charges

During the three and nine months ended September 30, 2011, there were no credit losses on fixed-maturity securities for which a portion of OTTI has been recognized in other comprehensive income. The following table provides the amount of OTTI charges for the three and nine months ended September 30, 2011:

(In millions)	Three months ended		Nine months ended September	
	September 30,		30,	
	2011	2010	2011	2010

Edgar Filing: CINCINNATI FINANCIAL CORP - Form 10-Q

Fixed maturities	\$ 3	\$ 1	\$ 3	\$ 3
Equity securities	-	-	30	33
Total	\$ 3	\$ 1	\$ 33	\$ 36

During the quarter ended September 30, 2011, we impaired four fixed-maturity securities for \$3 million. At September 30, 2011, 13 fixed-maturity investments with a total unrealized loss of \$3 million had been in an unrealized loss position for 12 months or more, but none were trading below 70 percent of amortized cost. At September 30, 2011, two equity securities with a total unrealized loss of \$1 million had been in an unrealized loss position for 12 months or more, but none were trading below 70 percent of amortized cost.

At December 31, 2010, 17 fixed-maturity investments with a total unrealized loss of \$4 million had been in an unrealized loss position for 12 months or more. Of that total, no fixed maturity investments were trading below 70 percent of amortized cost. Three equity investments with a total unrealized loss of \$1 million had been in an unrealized loss position for 12 months or more as of December 31, 2010. Of that total, no equity investments were trading below 70 percent of amortized cost.

NOTE 3 – Fair Value Measurements

Fair Value Hierarchy

In accordance with accounting guidance for fair value measurements and disclosures, we categorized our financial instruments, based on the priority of the observable and market-based data for the valuation technique used, into a three-level fair value hierarchy. The fair value hierarchy gives the highest priority to quoted prices with readily available independent data in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable market inputs (Level 3). When various inputs for measurement fall within different levels of the fair value hierarchy, the lowest observable input that has a significant impact on fair value measurement is used. Our valuation techniques have not changed from those used at December 31, 2010, and ultimately management determines fair value.

Financial instruments are categorized based upon the following characteristics or inputs to the valuation techniques:

- Level 1 – Financial assets and liabilities for which inputs are observable and are obtained from reliable quoted prices for identical assets or liabilities in active markets. This is the most reliable fair value measurement and includes, for example, active exchange-traded equity securities.
- Level 2 – Financial assets and liabilities for which values are based on quoted prices in markets that are not active or for which values are based on similar assets and liabilities that are actively traded. This also includes pricing models for which the inputs are corroborated by market data.
- Level 3 – Financial assets and liabilities for which values are based on prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. Level 3 inputs include the following:
 - o Quotes from brokers or other external sources that are not considered binding;
 - o Quotes from brokers or other external sources where it cannot be determined that market participants would in fact transact for the asset or liability at the quoted price; or
 - o Quotes from brokers or other external sources where the inputs are not deemed observable.

We conduct a thorough review of fair value hierarchy classifications on a quarterly basis. Reclassification of certain financial instruments may occur when input observability changes. As noted below in the Level 3 disclosure table, reclassifications are reported as transfers in or out of the Level 3 category as of the beginning of the quarter in which the reclassification occurred.

The following tables illustrate the fair value hierarchy for those assets measured at fair value on a recurring basis at September 30, 2011, and December 31, 2010. We do not have any material liabilities carried at fair value. There were no significant transfers between Level 1 and Level 2.

Fair Value Disclosures for Assets

(In millions)

(In millions)	Asset fair value measurements at September 30, 2011 using:			
	Quoted prices in active markets for identical assets (Level 1)	Significant other observable inputs (Level 2)	Significant unobservable inputs (Level 3)	Total

Each financial instrument that was deemed to have significant unobservable inputs when determining valuation is identified in the tables below by security type with a summary of changes in fair value as of September 30, 2011. Total Level 3 assets continue to be less than 1 percent of financial assets measured at fair value. At September 30, 2011, total fair value of assets priced with broker quotes and other non-observable market inputs for the fair value measurements and disclosures was \$31 million.

The following table provides the change in Level 3 assets for the three months ended September 30, 2011. Level 3 corporate fixed-maturity securities increased by \$7 million as one security was purchased for \$8 million, two securities totaling \$8 million were transferred into Level 2 and one security totaling \$7 million was transferred into Level 3. There were no other significant changes to Level 3 assets during this period.

(In millions)	Asset fair value measurements using significant unobservable inputs (Level 3) States, municipalities and political subdivisions fixed maturities- separate accounts Preferred equities Total				
	Corporate fixed maturities	Taxable fixed maturities- separate accounts	political subdivisions fixed maturities	Preferred equities	Total
Beginning balance, June 30, 2011	\$ 15	\$ -	\$ 4	\$ 7	\$ 26
Total gains or losses (realized/unrealized):					
Included in earnings (or changes in net assets)	-	-	-	-	-
Included in other comprehensive income	-	-	-	(1)	(1)
Purchases	8	-	-	-	8
Sales	-	-	(1)	-	(1)
Transfers into Level 3	7	-	-	-	7
Transfers out of Level 3	(8)	-	-	-	(8)
Ending balance, September 30, 2011	\$ 22	\$ -	\$ 3	\$ 6	\$ 31

(In millions)	Asset fair value measurements using significant unobservable inputs (Level 3) States, municipalities and political subdivisions fixed maturities- separate accounts Preferred equities Total				
	Corporate fixed maturities	Taxable fixed maturities- separate accounts

Transfers in and/or out of Level 3	1	-	-	-	1
Ending balance, September 30, 2010	\$ 21	\$ 2	\$ 4	\$ 5	\$ 32

The following table provides the change in Level 3 assets for the nine months ended September 30, 2011. Level 3 corporate fixed-maturity securities increased \$2 million for the nine months ended September 30, 2011. The change in corporate fixed-maturity securities resulted from the transfer of five securities totaling \$20 million into Level 2, two securities totaling \$7 million transferred into Level 3 and the purchase of two securities totaling \$15 million. There were no other significant changes to Level 3 assets during this period.

(In millions)	Asset fair value measurements using significant unobservable inputs (Level 3)				
	Corporate fixed maturities	Taxable fixed maturities- separate accounts	States, municipalities and political subdivisions fixed maturities	Preferred equities	Total
Beginning balance, December 31, 2010	\$ 20	\$ 2	\$ 4	\$ 5	\$ 31

Fair Value Disclosure for Senior Debt and Life Insurance Assets and Liabilities

The disclosures below are presented to provide timely information about the effects of current market conditions on financial instruments that are not reported at fair value in our condensed consolidated financial statements.

This table summarizes the amortized cost and principal amounts of our long-term debt:

(In millions)				Book value		Principal amount	
				September	December	September	December
				30,	31,	30,	31,
				2011	2010	2011	2010
Interest rate	Year of issue						
		Senior debentures, due					
6.900%	1998	2028		\$ 28	\$ 28	\$ 28	\$ 28
		Senior debentures, due					
6.920%	2005	2028		391	391	391	391
6.125%	2004	Senior notes, due 2034		371	371	374	374
		Total		\$ 790	\$ 790	\$ 793	\$ 793

The fair value of our senior debt approximated \$815 million at September 30, 2011, compared with \$783 million at year-end 2010. Fair value was determined under the fair value measurements and disclosure accounting rules based on market pricing of similar debt instruments that are actively trading. Fair value can vary with macroeconomic conditions. Regardless of the fluctuations in fair value, the outstanding principal amount of our long-term debt is \$793 million. None of the long-term debt is encumbered by rating triggers. Also, we have one variable rate note payable with outstanding principal amount of \$104 million, which approximates fair value. The additional \$55 million in short-term borrowing in the third quarter was primarily to fund share repurchases using our relatively low-cost source of borrowing.

The fair value of life policy loans outstanding principal and interest approximated \$41 million, compared with amortized cost of \$38 million reported in the condensed consolidated balance sheets at September 30, 2011. The fair value of life policy loans outstanding principal and interest approximated \$46 million, compared with amortized cost of \$40 million reported in the consolidated balance sheets at December 31, 2010.

Life reserves and liabilities for deferred annuities and other investment contracts were \$1.017 billion and \$930 million at September 30, 2011, and December 31, 2010, respectively. Fair value for these deferred annuities and investment contracts was \$923 million and \$933 million at September 30, 2011, and December 31, 2010, respectively. Fair values of liabilities associated with certain investment contracts are

calculated based upon internally developed models because active, observable markets do not exist for those items. To determine the fair value, we make the following significant assumptions: (1) the discount rates used to calculate the present value of expected payments are the risk-free spot rates plus an A3 rated bond spread for financial issuers at September 30, 2011, to account for non-performance risk; (2) the rate of interest credited to policyholders is the portfolio net earned interest rate less a spread for expenses and profit; and (3) additional lapses occur when the credited interest rate is exceeded by an assumed competitor credited rate, which is a function of the risk-free rate of the economic scenario being modeled.

NOTE 4 – Property Casualty Loss and Loss Expenses

This table summarizes activity for our consolidated property casualty loss and loss expense reserves:

(In millions)	Three months ended September 30,		Nine months ended September 30,	
	2011	2010	2011	2010
Gross loss and loss expense reserves, beginning of period	\$ 4,479	\$ 4,131	\$ 4,137	\$ 4,096
Less reinsurance receivable	508	311	326	435
Net loss and loss expense reserves, beginning of period	3,971	3,820	3,811	3,661
Net incurred loss and loss expenses related to:				
Current accident year	675	592	2,115	1,731
Prior accident years	(68)	(61)	(221)	(174)
Total incurred	607	531	1,894	1,557
Net paid loss and loss expenses related to:				
Current accident year	360	308	878	641
Prior accident years	205	196	814	730
Total paid	565	504	1,692	1,371
Net loss and loss expense reserves, end of period	4,013	3,847	4,013	3,847
Plus reinsurance receivable	450	319	450	319
Gross loss and loss expense reserves, end of period	\$ 4,463	\$ 4,166	\$ 4,463	\$ 4,166

We use actuarial methods, models and judgment to estimate, as of a financial statement date, the property casualty loss and loss expense reserves required to pay for and settle all outstanding insured claims, including incurred but not reported (IBNR) claims. The actuarial estimate is subject to review and adjustment by an inter-departmental committee that includes actuarial management, who is familiar with relevant company and industry business, claims and underwriting trends, as well as general economic and legal trends, that could affect future loss and loss expense payments.

We decreased the provision for prior accident years' incurred loss and loss expenses primarily due to reduced volatility in paid losses and reduced volatility in projections of future calendar year trends and favorable case reserve development. Favorable incurred development in prior accident years occurred mostly in the commercial lines casualty line of business and has had similar trends in the past two years, with approximately 60 percent coming from the most recent prior accident year in each nine-month period above. The reserve for loss and loss expenses in the condensed consolidated balance sheets also includes \$58 million at September 30, 2011, and \$59 million at September 30, 2010, for certain life and health loss and loss expense reserves.

NOTE 5 – Deferred Acquisition Costs

The expenses associated with issuing insurance policies – primarily commissions, premium taxes and underwriting costs – are deferred and amortized over the terms of the policies. We update our acquisition cost assumptions periodically to reflect actual experience, and we evaluate our deferred acquisition costs for recoverability. The table below shows the deferred policy acquisition costs and asset reconciliation, including the amortized deferred policy acquisition costs.

(In millions)	Three months ended September		Nine months ended September	
	30, 2011	30, 2010	30, 2011	30, 2010
Deferred policy acquisition costs asset, beginning of period	\$ 511	\$ 485	\$ 488	\$ 481
Capitalized deferred policy acquisition costs	182	168	543	510
Amortized deferred policy acquisition costs	(177)	(167)	(510)	(492)
Amortized shadow deferred policy acquisition costs	(4)	(17)	(9)	(30)
Deferred policy acquisition costs asset, end of period	\$ 512	\$ 469	\$ 512	\$ 469

There were no premium deficiencies recorded in the reported condensed consolidated statements of income, as the sum of the anticipated loss and loss adjustment expenses, policyholder dividends, maintenance expenses and underwriting expenses did not exceed the related unearned premiums and anticipated investment income.

NOTE 6 – Life Policy Reserves

We establish the reserves for traditional life insurance policies based on expected expenses, mortality, morbidity, withdrawal rates and investment yields, including a provision for uncertainty. Once these assumptions are established, they generally are maintained throughout the lives of the contracts. We use both our own experience and industry experience, adjusted for historical trends, in arriving at our assumptions for expected mortality, morbidity and withdrawal rates as well as for expected expenses. We base our assumptions for expected investment income on our own experience adjusted for current economic conditions.

We establish reserves for the company's universal life, deferred annuity and investment contracts equal to the cumulative account balances, which include premium deposits plus credited interest less charges and withdrawals. Some of our universal life policies contain no-lapse guarantee provisions. For these policies, we establish a reserve in addition to the account balance, based on expected no-lapse guarantee benefits and expected policy assessments.

(In millions)	September 30, 2011	December 31, 2010
Ordinary/traditional life	\$ 671	\$ 628
Universal life	474	459
Deferred annuities	819	730
Investment contracts	198	200
Other	17	17
Total gross reserves	\$ 2,179	\$ 2,034

NOTE 7 – Reinsurance

Our condensed consolidated statements of income include earned consolidated property casualty insurance premiums on assumed and ceded business:

(In millions)	Three months ended September 30,		Nine months ended September 30,	
	2011	2010	2011	2010
Direct earned premiums	\$ 817	\$ 782	\$ 2,404	\$ 2,295
Assumed earned premiums	3	3	10	8
Ceded earned premiums	(51)	(42)	(170)	(124)
Net earned premiums	\$ 769	\$ 743	\$ 2,244	\$ 2,179

Changes in 2011 ceded earned premiums compared with prior periods are related to earned reinstatement premiums as a result of the increase in catastrophe losses that occurred in the second quarter of 2011.

Our condensed consolidated statements of income include incurred consolidated property casualty insurance loss and loss expenses on assumed and ceded business:

(In millions)	Three months ended September 30,		Nine months ended September 30,	
	2011	2010	2011	2010
Direct incurred loss and loss expenses	\$ 649	\$ 549	\$ 2,157	\$ 1,526
Assumed incurred loss and loss expenses	8	3	28	8
Ceded incurred loss and loss expenses	(50)	(21)	(291)	23

Edgar Filing: CINCINNATI FINANCIAL CORP - Form 10-Q

Net incurred loss and loss expenses	\$ 607	\$ 531	\$ 1,894	\$ 1,557
-------------------------------------	--------	--------	----------	----------

Changes in 2011 ceded loss and loss expenses compared with prior periods are related to our increase in catastrophe losses that resulted in increased ceding to our reinsurers in the second and third quarters of 2011.

Largely because of a \$33 million reduction in ceded reserves, total ceded incurred loss and loss expenses for the nine months ended September 30, 2010, increased net incurred loss and loss expenses by \$23 million. This reserve reduction occurred in our USAIG pool, as discussed in our Annual Report on Form 10-K, Item 1A, Risk Factors, Page 28. Direct reserves were correspondingly reduced by \$33 million, so there was no effect on net incurred loss and loss adjustment expenses.

Our condensed consolidated statements of income include earned life insurance premiums on ceded business:

(In millions)	Three months ended September 30,		Nine months ended September 30,	
	2011	2010	2011	2010
Direct earned premiums	\$ 57	\$ 53	\$ 162	\$ 157
Assumed earned premiums	-	-	-	-
Ceded earned premiums	(14)	(12)	(39)	(37)
Net earned premiums	\$ 43	\$ 41	\$ 123	\$ 120

Cincinnati Financial Corporation Third-Quarter 2011 10-Q

Page 16

Our condensed consolidated statements of income include life insurance contract holders' benefits incurred on ceded business:

(In millions)	Three months ended September 30,		Nine months ended September 30,	
	2011	2010	2011	2010
Direct contract holders' benefits incurred	\$ 58	\$ 59	\$ 167	\$ 173
Assumed contract holders' benefits incurred	-	-	-	-
Ceded contract holders' benefits incurred	(9)	(15)	(29)	(44)
Net incurred loss and loss expenses	\$ 49	\$ 44	\$ 138	\$ 129

NOTE 8 – Employee Retirement Benefits

The following summarizes the components of net periodic costs for our qualified and supplemental pension plans:

(In millions)	Three months ended September 30,		Nine months ended September 30,	
	2011	2010	2011	2010
Service cost	\$ 3	\$ 2	\$ 8	\$ 7
Interest cost	4	3	11	10
Expected return on plan assets	(4)	(3)	(12)	(10)
Amortization of actuarial loss and prior service cost	1	1	3	2
Net periodic benefit cost	\$ 4	\$ 3	\$ 10	\$ 9

See our 2010 Annual Report on Form 10-K, Item 8, Note 13, Employee Retirement Benefits, Page 121 for information on our retirement benefits. We made matching contributions of \$2 million to our 401(k) savings plan during the third quarter of 2011 and 2010 and contributions of \$6 million for the first nine months of 2011 and 2010.

We contributed \$35 million to our qualified pension plan during the first quarter of 2011. We do not anticipate further contributions to our qualified pension plan during the remainder of 2011.

NOTE 9 – Stock-Based Associate Compensation Plans

We currently have four equity compensation plans that permit us to grant various types of equity awards. We currently grant incentive stock options, non-qualified stock options, service-based restricted stock units and performance-based restricted stock units, including some with market-based performance objectives, under our shareholder-approved plans. We also have a Holiday Stock Plan that permits annual awards of one share of common stock to each full-time associate for each full calendar year of service up to a maximum of 10 shares. One of our equity compensation plans permits us to grant stock to our outside directors as a component of their annual compensation. For additional information about our equity compensation plans, see our 2010 Annual Report on Form 10-K, Item 8, Note 17, Stock-Based Associate Compensation Plans, Page 125.

A total of 16.9 million shares are authorized to be granted under the shareholder-approved plans. At September 30, 2011, 4.4 million shares were available for future issuance under the plans.

Stock-Based Awards

During the first quarter of 2011, we granted 24,492 shares of common stock to our directors for 2010 board service fees. Stock-based awards were granted to associates during the first and second quarters of 2011 and are summarized

in the tables below. Stock-based compensation cost after tax was \$2 million for both the three months ended September 30, 2011 and 2010, and \$7 million and \$6 million for the nine months ended September 30, 2011 and 2010, respectively.

As of September 30, 2011, \$18 million of unrecognized compensation costs related to non-vested awards is expected to be recognized over a weighted-average period of 2.0 years.

Here is a summary of option information:

(Shares in thousands)

	Shares	Weighted- average exercise price
Outstanding at January 1, 2011	9,690	\$ 36.59
Granted	891	33.98
Exercised	(24)	26.87
Forfeited or expired	(1,155)	33.85
Outstanding at September 30, 2011	9,402	36.71

Here is a summary of restricted stock unit information:

(Shares in thousands)	Service-based nonvested shares	Weighted-average grant-date fair value	Performance-based nonvested shares	Weighted-average grant-date fair value
Nonvested at January 1, 2011	716	\$ 26.00	149	\$ 26.08
Granted	298	29.59	51	30.96
Vested	(221)	34.21	(35)	32.42
Forfeited or canceled	(15)	24.62	(8)	33.21
Nonvested at September 30, 2011	778	25.07	157	25.86

NOTE 10 – Commitments and Contingent Liabilities

In the ordinary course of conducting business, the company and its subsidiaries are named as defendants in various legal proceedings. Most of these proceedings are claims litigation involving the company's insurance subsidiaries in which the company is either defending or providing indemnity for third-party claims brought against insureds who are litigating first-party coverage claims. The company accounts for such activity through the establishment of unpaid loss and loss adjustment expense reserves. We believe that the ultimate liability, if any, with respect to such ordinary-course claims litigation, after consideration of provisions made for potential losses and costs of defense, is immaterial to our consolidated financial condition, results of operations and cash flows.

The company and its subsidiaries also are occasionally involved in other legal actions, some of which assert claims for substantial amounts. These actions include, among others, putative class actions seeking certification of a state or national class. Such putative class actions have alleged, for example, excessive premium charges for uninsured motorist coverage. The company's insurance subsidiaries also are occasionally parties to individual actions in which extra-contractual damages, punitive damages or penalties are sought, such as claims alleging bad faith in the handling of insurance claims.

On a quarterly basis, we review the outstanding lawsuits. Under current accounting guidance, we establish accruals for lawsuits when it is probable that a loss has been incurred and we can reasonably estimate its potential exposure. The company accounts for such probable and estimable losses, if any, through the establishment of legal expense reserves. Based on our quarterly review, we believe that our accruals for probable and estimable lawsuits are reasonable and that the amounts accrued do not have a material effect on our consolidated financial condition or results of operations. However, if any one or more of these cases results in a judgment against us or settlement for an amount that is significantly greater than the amount accrued, the resulting liability could have a material effect on the company's consolidated results of operations or cash flows. Based on our quarterly review, for any other matter for which the risk of loss is more than remote, we are unable to reasonably estimate the potential loss or establish a reasonable range of loss because each such matter is in an early stage of its respective proceeding.

NOTE 11 – Income Taxes

As of September 30, 2011, and December 31, 2010, we had no liability for unrecognized tax benefits. Details about our liability for unrecognized tax benefits are found in our 2010 Annual Report on Form 10-K, Item 8, Note 11, Income Taxes, Page 120.

The differences between the 35 percent statutory income tax rate and our effective income tax rate were as follows:

(Dollars in millions)	Three months ended September 30,		Nine months ended September 30,	
	2011	2010	2011	2010

Edgar Filing: CINCINNATI FINANCIAL CORP - Form 10-Q

Tax at statutory rate	\$ 4	35.0 %	\$ 77	35.0 %	\$ (4)	35.0 %	\$ 114	35.0 %
Increase (decrease) resulting from:								
Tax-exempt income from municipal bonds	(9)	(81.2)	(9)	(4.1)	(26)	254.7	(27)	(8.3)
Dividend received exclusion	(5)	(44.5)	(5)	(2.1)	(15)	144.8	(14)	(4.2)
Other	2	18.0	2	0.6	3	(14.5)	3	0.7
Effective tax	\$ (8)	(72.7)%	\$ 65	29.4 %	\$ (42)	420.0%	\$ 76	23.2 %

NOTE 12 – Segment Information

We operate primarily in two industries, property casualty insurance and life insurance. We regularly review our reporting segments to make decisions about allocating resources and assessing performance:

- Commercial lines property casualty insurance
- Personal lines property casualty insurance
- Excess and Surplus lines property and casualty insurance
 - Life insurance
 - Investments

As discussed in our 2010 Annual Report on Form 10-K, Item 8, Note 18, Segment Information, we revised our reportable segments during the fourth quarter of 2010 to establish a separate reportable segment for excess and surplus lines. This new segment includes results of The Cincinnati Specialty Underwriters Insurance Company and CSU Producer Resources. Historically, the excess and surplus lines results were reflected in Other. Prior period data included in this quarterly report has been adjusted to represent this new segment.

We report as Other the non-investment operations of the parent company and its non-insurer subsidiary, CFC Investment Company. See our 2010 Annual Report on Form 10-K, Item 8, Note 18, Segment Information, Page 115 for a description of revenue, income or loss before income taxes and identifiable assets for each of the five segments.

Segment information is summarized in the following table:

(In millions)	Three months ended September 30,		Nine months ended September 30,

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion highlights significant factors influencing the consolidated results of operations and financial position of Cincinnati Financial Corporation (CFC). It should be read in conjunction with the consolidated financial statements and related notes included in our 2010 Annual Report on Form 10-K. Unless otherwise noted, the industry data is prepared by A.M. Best Co., a leading insurance industry statistical, analytical and financial strength rating organization. Information from A.M. Best is presented on a statutory basis. When we provide our results on a comparable statutory basis, we label it as such; all other company data is presented in accordance with accounting principles generally accepted in the United States of America (GAAP).

We present per share data on a diluted basis unless otherwise noted, adjusting those amounts for all stock splits and dividends. Dollar amounts are rounded to millions; calculations of percent changes are based on dollar amounts rounded to the nearest million. Certain percentage changes are identified as not meaningful (nm).

Safe Harbor Statement

This is our "Safe Harbor" statement under the Private Securities Litigation Reform Act of 1995. Our business is subject to certain risks and uncertainties that may cause actual results to differ materially from those suggested by the forward-looking statements in this report. Some of those risks and uncertainties are discussed in our 2010 Annual Report on Form 10-K, Item 1A, Risk Factors, Page 24.

Factors that could cause or contribute to such differences include, but are not limited to:

- Unusually high levels of catastrophe losses due to risk concentrations, changes in weather patterns, environmental events, terrorism incidents or other causes
 - Increased frequency and/or severity of claims
 - Inadequate estimates or assumptions used for critical accounting estimates
- Recession or other economic conditions resulting in lower demand for insurance products or increased payment delinquencies
 - Declines in overall stock market values negatively affecting the company's equity portfolio and book value
- Events, such as the credit crisis, followed by prolonged periods of economic instability or recession, that lead to:
 - o Significant or prolonged decline in the value of a particular security or group of securities and impairment of the asset(s)
 - o Significant decline in investment income due to reduced or eliminated dividend payouts from a particular security or group of securities
 - o Significant rise in losses from surety and director and officer policies written for financial institutions
- Prolonged low interest rate environment or other factors that limit the company's ability to generate growth in investment income or interest rate fluctuations that result in declining values of fixed-maturity investments, including declines in accounts in which we hold bank-owned life insurance contract assets

- Increased competition that could result in a significant reduction in the company's premium volume
- Delays in adoption and implementation of underwriting and pricing methods that could increase our pricing accuracy, underwriting profit and competitiveness
- Changing consumer insurance-buying habits and consolidation of independent insurance agencies that could alter our competitive advantages
- Inability to obtain adequate reinsurance on acceptable terms, amount of reinsurance purchased, financial strength of reinsurers and the potential for non-payment or delay in payment by reinsurers
- Inability to defer policy acquisition costs for any business segment if pricing and loss trends would lead management to conclude that segment could not achieve sustainable profitability
- Events or conditions that could weaken or harm the company's relationships with its independent agencies and hamper opportunities to add new agencies, resulting in limitations on the company's opportunities for growth, such as:

- o Downgrades of the company's financial strength ratings

- o Concerns that doing business with the company is too difficult
- o Perceptions that the company's level of service, particularly claims service, is no longer a distinguishing characteristic in the marketplace
- o Delays or inadequacies in the development, implementation, performance and benefits of technology projects and enhancements
- Actions of insurance departments, state attorneys general or other regulatory agencies, including a change to a federal system of regulation from a state-based system, that:
 - o Restrict our ability to exit or reduce writings of unprofitable coverages or lines of business
 - o Place the insurance industry under greater regulatory scrutiny or result in new statutes, rules and regulations
- o Add assessments for guaranty funds, other insurance related assessments or mandatory reinsurance arrangements; or that impair our ability to recover such assessments through future surcharges or other rate changes
 - o Increase our provision for federal income taxes due to changes in tax law
 - o Increase our other expenses
 - o Limit our ability to set fair, adequate and reasonable rates
 - o Place us at a disadvantage in the marketplace
- o Restrict our ability to execute our business model, including the way we compensate agents
 - Adverse outcomes from litigation or administrative proceedings
- Events or actions, including unauthorized intentional circumvention of controls, that reduce the company's future ability to maintain effective internal control over financial reporting under the Sarbanes-Oxley Act of 2002
- Unforeseen departure of certain executive officers or other key employees due to retirement, health or other causes that could interrupt progress toward important strategic goals or diminish the effectiveness of certain longstanding relationships with insurance agents and others
- Events, such as an epidemic, natural catastrophe or terrorism, that could hamper our ability to assemble our workforce at our headquarters location
- Difficulties with technology or data security breaches that could negatively affect our ability to conduct business and our relationships with agents, policyholders and others

Further, the company's insurance businesses are subject to the effects of changing social, economic and regulatory environments. Public and regulatory initiatives have included efforts to adversely influence and restrict premium rates, restrict the ability to cancel policies, impose underwriting standards and expand overall regulation. The company also is subject to public and regulatory initiatives that can affect the market value for its common stock, such as measures affecting corporate financial reporting and governance. The ultimate changes and eventual effects, if any, of these initiatives are uncertain.

Introduction

Corporate Financial Highlights

Statements of Income and Per Share Data

(Dollars in millions
except share data)

	Three months ended September 30,			Nine months ended September 30,		
	2011	2010	Change %	2011	2010	Change %
Statement of operations data						
Earned premiums	\$ 812	\$ 784	4	\$ 2,367	\$ 2,299	3
Investment income, net of expenses (pretax)	130	128	2	393	388	1
Realized investment gains and (losses) (pretax)	(2)	155	nm	77	140	(45)
Total revenues	944	1,071	(12)	2,848	2,836	0
Net income	19	156	(88)	32	251	(87)
Per share data						
Net income - diluted	0.12	0.95	(87)	0.20	1.53	(87)
Cash dividends declared	0.4025	0.40	1	1.2025	1.19	1
Weighted average shares outstanding	163,085,974	163,175,682	0	163,464,767	163,251,628	0

Revenues decreased for the third quarter of 2011 compared with the 2010 quarter, primarily due to lower net realized investment gains and losses. Revenues increased for the nine months ended September 30, 2011, compared with the same period of 2010, primarily due to higher earned premiums. Revenues from investment income were up for both 2011 periods. Premium and investment revenue trends are discussed further in the respective sections of Results of Operations, Page 28.

Realized investment gains and losses are recognized on the sales of investments or as otherwise required by GAAP. We have substantial discretion in the timing of investment sales, and that timing generally is independent of the insurance underwriting process. GAAP also requires us to recognize in income the gains or losses from certain changes in fair values of securities even though we continue to hold the securities.

Net income for the third quarter of 2011 compared with the 2010 third quarter decreased \$137 million primarily due to net realized investment gains and losses that declined by \$101 million after taxes and lower property casualty underwriting results that declined \$34 million after taxes. Higher catastrophe losses, mostly weather related, were responsible for \$42 million of the decline in underwriting results, and higher weather-related losses that were not identified as part of designated catastrophe events for the property casualty industry also lowered property casualty underwriting results. Life insurance segment results were down \$1 million and investment segment results were down \$100 million, as a \$101 million decrease from net realized investment gains and losses offset a \$1 million increase in investment income, all on an after-tax basis. For the nine-month period ended September 30, 2011, net income decreased compared with the same period of 2010, also primarily due to lower property casualty underwriting results that declined \$178 million after taxes, including \$183 million from higher catastrophe losses. After-tax investment income rose \$3 million while net realized investment gains and losses declined by \$40 million. Performance by

segment is discussed below in Results of Operations, beginning on Page 28. As discussed in our 2010 Annual Report on Form 10-K, Item 7, Factors Influencing Our Future Performance, Page 37, there are several reasons that our performance during 2011 may be below our long-term targets. In that annual report, as part of Results of Operations, we also discussed the full-year 2011 outlook for each reporting segment.

The board of directors is committed to rewarding shareholders directly through cash dividends and through share repurchase authorizations. Through 2010, the company had increased the indicated annual cash dividend rate for 50 consecutive years, a record we believe was matched by only nine other publicly traded companies. Cash dividends declared during the first nine months of 2011 increased approximately 1 percent compared with the same period of 2010. In August 2011, the board of directors increased the fourth quarter dividend to 40.25 cents per share, and the payment of that dividend in mid-October resulted in our 51st consecutive year of increasing cash dividends. In addition, \$30 million of Cincinnati Financial Corporation common stock shares were repurchased during the third quarter of 2011. Our board regularly evaluates relevant factors in share repurchase- and dividend-related decisions, and the 2011 dividend increase signaled confidence in our strong capital, liquidity and financial flexibility, as well as progress through our initiatives to improve earnings performance.

Balance Sheet Data and Performance Measures

(Dollars in millions except share data)				At September 30, 2011		At December 31, 2010	
Balance sheet data							
Invested assets				\$ 11,529		\$ 11,508	
Total assets				15,412		15,095	
Short-term debt				104		49	
Long-term debt				790		790	
Shareholders' equity				4,786		5,032	
Book value per share				29.54		30.91	
Debt-to-total-capital ratio				15.7 %		14.3 %	
				Three months ended September 30, 2011		Nine months ended September 30, 2010	
				2010		2011	
Performance measure							
Value creation ratio				(3.4)%		7.1 %	
				(0.5)%		9.4 %	

Total assets increased 2 percent compared with year-end 2010, largely due to growth in premiums receivable and reinsurance receivable. The premiums receivable asset reflected growth in net written premium while the reinsurance receivable asset, primarily payments due from reinsurers, rose because of higher catastrophe losses during 2011. Shareholders' equity declined 5 percent and book value per share declined 4 percent during the first nine months of 2011. Our debt-to-total-capital ratio (capital is the sum of debt plus shareholders' equity) rose compared with the December 31, 2010, level. The value creation ratio, defined below, was lower for the first nine months of 2011 compared with 2010, primarily due to a reduction in unrealized investment gains and lower net income. The \$1.37 decrease in book value per share during the first nine months of 2011 lowered the value creation ratio by 4.4 percentage points while dividends declared at \$1.2025 per share during the first nine months of 2011 contributed 3.9 points.

Progress Toward Long-Term Value Creation

Operating through The Cincinnati Insurance Company, Cincinnati Financial Corporation is one of the 25 largest property casualty insurers in the nation, based on 2010 written premium volume for approximately 2,000 U.S. stock and mutual insurer groups. We market our insurance products through a select group of independent insurance agencies in 39 states as discussed in our 2010 Annual Report on Form 10-K, Item 1, Our Business and Our Strategy, Page 3.

We maintain a long-term perspective that guides us in addressing immediate challenges or opportunities while focusing on the major decisions that best position our company for success through all market cycles. We believe that this forward-looking view has consistently benefited our policyholders, agents, shareholders and associates.

To measure our long-term progress in creating shareholder value, we have defined a value creation metric that we believe captures the contribution of our insurance operations, the success of our investment strategy and the importance we place on paying cash dividends to shareholders. This measure, our value creation ratio or VCR, is made up of two primary components: (1) our rate of growth in book value per share plus (2) the ratio of dividends

declared per share to beginning book value per share. For the period 2010 through 2014, an annual value creation ratio averaging 12 percent to 15 percent is our primary performance target. Management believes this non-GAAP measure is a useful supplement to GAAP information.

When looking at our long-term objectives, we see three performance drivers:

- Premium growth — We believe over any five-year period our agency relationships and initiatives can lead to a property casualty written premium growth rate that exceeds the industry average. The compound annual growth rate of our net written premiums was negative 0.7 percent over the five-year period 2006 through 2010, slightly below the negative 0.5 percent estimated growth rate for the property casualty insurance industry. Our premium mix, relative to the industry, is more heavily weighted in the commercial lines segment of the industry, where growth has lagged the personal lines segment in recent years.

For the first nine months of 2011, our total property casualty net written premiums' year-over-year growth was 4 percent, with our largest segment, commercial lines, up 3 percent. Our nine-month growth rate compares favorably with the 3 percent estimated for the industry for the first six months of 2011. Given the ongoing weak pricing in parts of the commercial insurance marketplace, we continue to exercise discipline in risk selection and pricing. Our premium growth initiatives are discussed below in Highlights of Our Strategies and Supporting Initiatives, Page 24.

- **Combined ratio** — We believe our underwriting philosophy and initiatives can generate a GAAP combined ratio over any five-year period that is consistently within the range of 95 percent to 100 percent. Our GAAP combined ratio averaged 98.3 percent over the five-year period 2006 through 2010. It was outside of this range in 2006 and 2007, with ratios under 95 percent indicating higher underwriting profitability. It was outside of the range with ratios above 100 percent in 2008 through 2010, indicating underwriting losses. During that period, it averaged 102.3 percent, including an average catastrophe loss ratio that was 2.1 percentage points higher than our average for the 10-year period prior to 2008. Our statutory combined ratio averaged 98.2 percent over the five-year period 2006 through 2010, outperforming an estimated 99.5 percent for the property casualty industry.

For the first nine months of 2011, our GAAP combined ratio was 116.8 percent and our statutory combined ratio was 116.1 percent, both including 18.8 percentage points of current accident year catastrophe losses partially offset by 9.8 percentage points of favorable loss reserve development on prior accident years. Our nine-month statutory combined ratio before the effects of catastrophe losses, at 97.2 percent, was somewhat higher than the property casualty industry's 96.8 percent estimated first-half 2011 statutory combined ratio before catastrophe losses.

- **Investment contribution** — We believe our investment philosophy and initiatives can drive investment income growth and lead to a total return on our equity investment portfolio over a five-year period that exceeds the five-year return of the Standard & Poor's 500 Index. The compound annual return for our equity portfolio over the five-year period 2006 through 2010 was negative 3.0 percent compared with positive 2.3 percent for the Index. Our equity portfolio underperformed the market for the five-year period primarily because of a decline in the market value of our previously large equity holdings in the financial services sector during the financial crisis.

Investment income, on a before-tax basis, grew at a compound annual rate of 0.3 percent over the five-year period 2006 through 2010. It grew in each year except 2008 and 2009, when we experienced a dramatic reduction in dividend payouts by financial services companies previously held in our equity portfolio.

For the first nine months of 2011, pretax investment income was \$393 million, up 1 percent from \$388 million for the same period in 2010. The increase reflected higher dividends that somewhat offset declining interest income due to declining yields from lower interest rates. We believe our investment portfolio mix provides an appropriate balance of income stability and growth with capital appreciation potential.

Highlights of Our Strategy and Supporting Initiatives

Management has worked to identify a strategy that can lead to long-term success, with concurrence by the board of directors. Our strategy is intended to position us to compete successfully in the markets we have targeted while appropriately managing risk. Further description of our long-term, proven strategy can be found in our 2010 Annual Report on Form 10-K, Item 1, Our Business and Our Strategy, Page 3. We believe successful implementation of two groups of initiatives that support our strategy, summarized below, will help us better serve our agent customers and reduce variability in our financial results. As we realize benefits from these initiatives, we expect to grow earnings and book value over the long term, successfully navigating challenging economic, market or industry pricing cycles.

- **Improve insurance profitability** – Implementation of this group of initiatives is intended to improve pricing capabilities for our property casualty business, increasing our ability to manage our business while also enhancing our efficiency. Improved pricing capabilities through the use of technology and analytics can lead to better profit margins. Improved planning for growth and profitability can enhance our ability to achieve objectives at all levels in the organization. Improved internal processes with additional performance metrics can help us be more efficient and effective. These initiatives support the ability of the agencies that represent us to grow profitably by allowing them to serve clients faster and to manage agency expenses more efficiently.

- Drive premium growth – Implementation of this group of initiatives is intended to further penetrate each market we serve through our independent agency network. Strategies aimed at specific market opportunities, along with service enhancements, can help our agents grow and increase our share of their business. Diversified growth also may reduce variability of losses from weather-related catastrophes.

We discuss initiatives supporting each of these strategies below, along with metrics we use to assess our progress.

Improve Insurance Profitability

The main initiatives to improve our insurance profitability include:

- Improve pricing precision using predictive analytics – We continue efforts to expand our pricing and underwriting capabilities by using predictive analytics, and we expect cumulative benefits of these efforts to improve loss ratios over time. Development of additional business data to support accurate underwriting, pricing and other business decisions also continues. A project that will continue in phases over the next several years will deploy a full data management program, including a data warehouse for our property casualty and life insurance operations, providing enhanced granularity of pricing data. Progress to date during 2011 and future plans for key initiatives are summarized below.
- o Commercial lines – In the second half of 2009, we began to use predictive modeling tools that align individual insurance policy pricing to risk attributes for our workers' compensation line of business. We believe these tools are improving our pricing precision. For example, we achieved 2011 average renewal pricing increases over five times higher for workers' compensation rating segments indicated as lower quality in our model compared with the higher quality rating segments. By late 2010, we had completed development of predictive models for our commercial auto line of business and also for general liability and commercial property coverages in commercial package accounts. A pilot version for production use of tools for these three business lines began early in the second quarter of 2011, and a full-production release occurred during the third quarter of 2011. Underwriters using these tools have enhanced abilities to target profitability and to discuss pricing impacts with agency personnel. Development of similar tools for our specialty packages line of business is planned for the fourth quarter of 2011.
- o Personal lines – Prior to 2010, we began to use predictive modeling tools for our homeowner line of business, and in late 2010 we began using similar analytics for personal auto. We believe these tools are improving our pricing precision based on the insured exposure. For example, we achieved 2011 average renewal pricing increases approximately twice as high for homeowner insurance rating segments indicated as lower quality in our model compared with the higher quality rating segments. Personal lines new business written premiums have increased at a healthy pace, growing 8 percent during the first nine months of 2011. We are continuing to develop model attributes and expand our pricing points to add more precision. This includes an update to the modeling of our homeowner book for pricing changes targeted for implementation beginning the fourth quarter of 2011.
- Improve agency-level planning for profitability and growth – Additional use of analytic tools helps us to better understand our business in greater detail and to communicate additional quantitative and qualitative information to agents and associates. To predict profitability, we are developing models at an agency level and in aggregate. Enhanced reporting of related metrics should facilitate coordination and consistent decision-making. During 2011, we are enhancing our agency-level planning processes to develop multi-year profitability and growth plans. In addition to determining planned premium growth from existing agencies, these processes will help project the number of additional agencies needed to achieve premium targets.
- Improve internal processes and further deploy performance metrics – Process improvement supports our strategic goals and can reduce internal costs. Use of additional measurements to track progress and accountability for results will improve our overall effectiveness. We have extended our efforts to engage all of our associates in our corporate goals, deploying corporate and department goal cards to each associate. Each department manager is tailoring individual goals to align with department and corporate goals, facilitating discussions and actions to help us reach success. We are also developing a companion reporting tool to help us measure our steps along the way.

Completion of system development for additional coverages in our commercial lines policy administration system is expected to facilitate important internal process improvement initiatives for 2011. Progress during 2011 has included

implementing capabilities to process professional and employment practices liability insurance in several states. In addition, we deployed in two additional states all commercial lines coverages currently available for processing through the system.

Another important initiative aims to develop business rules and parameters for personal lines accounts that will allow processing of risks that meet qualifying underwriting criteria without intervention by an underwriter. The objective is to streamline processing for our agents and associates, permitting more time for risks that need additional service or attention. The initiative includes developing technology to integrate automated steps into the current process plus changes in workflow, including auditing for compliance with underwriting eligibility requirements. Progress during the first nine months of 2011 included implementing a new rules engine for underwriting new business in most states.

We measure the overall success of our strategy to improve insurance profitability primarily through our GAAP combined ratio, which we believe can be consistently within the range of 95 percent to 100 percent over any five-year period.

In addition, we expect these initiatives to contribute to our rank as the No. 1 or No. 2 insurance carrier based on premium volume in agencies that have represented us for at least five years. We earned that rank in approximately 75 percent of these agencies, based on premiums for 2010, the most recent year for which full agency data is available. We are working to increase the percentage of agencies with this premium share ranking.

Drive Premium Growth

Primary initiatives to drive premium growth include:

- Gain a larger share of agency business – We continue to execute on prior year growth initiatives and add new initiatives to improve our penetration in each market we serve through our independent agencies. Our focus remains on the key components of agent satisfaction based on factors agents tell us are most important.
- o Innovate our small business strategy – Additional focus on attributes that agencies weigh heavily in carrier selection for their clients is a key component of this initiative. Those attributes include technology ease of use and integration with agency management systems, flexible billing, product breadth and pricing, and service and marketing support for new business. The initiative includes refining workflows for the entire policy process, with more streamlined underwriting and claims processes, and providing additional policyholder services. In addition to growing premiums, our small business strategy is expected to improve profitability due to lower expenses through more automation of data gathering and use of predictive analytics.

We also are developing and coordinating targeted marketing, including cross-selling opportunities for our agencies, through our Target Markets department. This area focuses on new commercial product development, including identification and promotional support for promising classes of business. We rolled out one new program during the third quarter of 2011 and plan to roll out new programs for two additional classes in the fourth quarter. Our target markets programs aim to attract larger business accounts in addition to small business accounts, contributing to growth for our agencies and helping to drive our premium growth.

- o New agency appointments – We continue to appoint new agencies to develop additional points of distribution, focusing on areas where our market share is less than 1 percent while also considering economic and catastrophe risk factors. In 2011, we are targeting approximately 120 appointments of independent agencies, with a significant portion in the five states we entered since late 2008. During the first nine months of 2011, we appointed 101 new agencies that write in aggregate of approximately \$1.6 billion in property casualty premiums annually with various insurance carriers for an average of approximately \$16 million per agency. As of September 30, 2011, a total of 1,298 agency relationships market our standard market insurance products from 1,619 reporting locations.

We seek to build a close, long-term relationship with each agency we appoint, carefully evaluating the marketing reach of each new appointment to ensure the territory can support both current and new agencies. Our 123 field marketing territories are staffed by marketing representatives averaging 19 years of industry experience and 10 years as a Cincinnati Insurance field marketing representative. The team of field associates in each territory works together with headquarters support associates to form our agent-centered business model, providing local expertise, helping us better understand the accounts we underwrite and creating market advantages for our agents. We generally earn a 10 percent share of an agency's business within 10 years of its appointment. We also help our agents grow their business by attracting more clients in their communities through unique, Cincinnati-style service.

- Improve consumer relationships we undertake on behalf of our agencies – Improved interactions with consumers who are clients and prospects of our agents can drive more business to agents and help them grow. Through this initiative, we expect to identify the various ways we interact with consumers on behalf of our agencies and ensure that we do so in a manner that reinforces the value of the independent agent while establishing the value and service of a Cincinnati policy. By understanding and monitoring trends that drive consumer purchasing decisions, we can create positive interactions. During the third quarter of 2011, we announced expansion of our claim reporting center to receive direct policyholder claim reports for more types of claims, in addition to the workers' compensation claims previously eligible. We also expect online policyholder services to continue evolving and will continue to work with agencies to meet the needs of their clients. During the third quarter of 2011, we expanded online information about claim reporting options and enabled online viewing and printing of declarations pages and automobile insurance identification cards for all personal lines policyholders.

We measure the overall success of this strategy to drive premium growth primarily through changes in net written premiums, which we believe can grow faster than the industry average over any five-year period. For the first nine months of 2011, our property casualty net written premiums increased 4 percent, compared with an estimated increase of approximately 3 percent for the industry for the first six months of 2011.

Despite near-term challenges in insurance and financial markets that are reflected in year-to-date 2011 financial performance, we have made significant progress on our initiatives and remain confident that our overall strategy can deliver long-term value for shareholders.

An important part of our long-term strategy is financial strength, which is described in our 2010 Annual Report on Form 10-K, Item 1, Our Business and Our Strategy, Financial Strength, Page 5. One aspect of our financial strength is prudent use of reinsurance to help manage financial performance variability due to catastrophe loss experience. A description of how we use reinsurance is included in our 2010 Annual Report on Form 10-K, Item 7, Liquidity and Capital Resources, 2011 Reinsurance Programs, Page 90, and is updated below in Consolidated Property Casualty Insurance Results of Operations, beginning on Page 28. Another aspect is our investment portfolios, which remain well-diversified as discussed in Item 3, Quantitative and Qualitative Disclosures about Market Risk, Page 50. We continue to maintain strong parent company liquidity and financial strength that increases our flexibility through all periods to maintain our cash dividend and to continue to invest in and expand our insurance operations. At September 30, 2011, we held \$1.006 billion of our cash and invested assets at the parent company level, of which \$716 million, or 71.2 percent, was invested in common stocks, and \$35 million, or 3.5 percent, was cash or cash equivalents. Our ratio of debt-to-total-capital at 15.7 percent remains well below our target limit of 20 percent. Another important indicator of financial strength is our ratio of property casualty net written premiums to statutory surplus, which was 0.9-to-1 for the 12 months ended September 30, 2011, up slightly from 0.8-to-1 at year-end 2010.

Our financial strength ratings by independent ratings firms also are important. In addition to rating our parent company's senior debt, four firms award insurer financial strength ratings to our property casualty and life companies based on their quantitative and qualitative analyses. These ratings primarily assess an insurer's ability to meet financial obligations to policyholders and do not necessarily address all of the matters that may be important to investors. Ratings may be subject to revision or withdrawal at any time by the rating agency, and each rating should be evaluated independently of any other rating.

As of October 26, 2011, our insurer financial strength ratings were:

Insurer Financial Strength Ratings										Date of Most Recent Affirmation or Action
Rating Agency	Standard Market Property Casualty Insurance Subsidiary			Life Insurance Subsidiary			Excess and Surplus Insurance Subsidiary			
			Rating Tier			Rating Tier			Rating Tier	
A. M. Best Co.	A+	Superior	2 of 16	A	Excellent	3 of 16	A	Excellent	3 of 16	Stable outlook (12/13/10)

Ratings			6 of		6 of				Stable outlook
Services	A	Strong	21	A	Strong	21	-	-	(8/4/11)

All of our insurance subsidiaries continue to be highly rated.

On October 21, 2011, Moody's Investors Service affirmed our ratings that it had assigned in September 2008, changing its outlook to negative. Moody's noted that its rating is supported by our strong regional franchise, solid risk-adjusted capital position, consistent reserve strength, strong financial flexibility and significant holding company liquidity. However, Moody's expects that operating results may continue to reflect weak underwriting profitability with high weather-related losses.

On August 4, 2011, Standard & Poor's Ratings Services affirmed our ratings that it had assigned in July 2010, continuing its stable outlook. S&P said its rating was based on our strong competitive position, which is reinforced by a loyal and productive agency force and a low-cost infrastructure. S&P also cited our very strong capitalization and high degree of financial flexibility. S&P noted that our strengths are partially offset by deteriorating property casualty underwriting results due to above-average weather-related losses and weak results in our workers' compensation line of business.

On May 2, 2011, Fitch Ratings affirmed our ratings that it had assigned in September 2010, continuing its stable outlook. Fitch noted that ratings strengths include conservative capitalization, moderate holding company leverage, ample liquidity and competitive advantages from our distribution system. Fitch said the ratings recognize steps we have taken to rebalance our common stock portfolio to reduce capital and earnings volatility. Fitch noted ratings concerns principally related to challenges from competitive market conditions and exposure to regional natural catastrophes and weather-related losses.

Results of Operations

The consolidated results of operations reflect the operating results of each of our five segments along with the parent company and other activities reported as “Other.” The five segments are:

- Commercial lines property casualty insurance
- Personal lines property casualty insurance
- Excess and surplus lines property casualty insurance
 - Life insurance
 - Investments

We report as Other the non-investment operations of the parent company and its non-insurer subsidiary, CFC Investment Company. See Item 1, Note 12, Segment Information, Page 18, for discussion of the calculations of segment data. Results of operations for each of the five segments are discussed below.

Consolidated Property Casualty Insurance Results of Operations

Consolidated property casualty insurance results include premiums and expenses for our standard market insurance (commercial lines and personal lines segments) as well as our surplus lines operations.

Our consolidated property casualty insurance operations generated an underwriting loss of \$80 million and \$374 million for the three and nine months ended September 30, 2011, compared with an underwriting loss of \$28 million and \$100 million for the three and nine months ended September 30, 2010. The primary causes of the higher underwriting losses were increases of \$65 million and \$282 million, for the three- and nine-month periods, in losses caused by natural catastrophes that were primarily weather-related. Ceded premiums to reinstate coverage layers of our property catastrophe reinsurance treaty lowered earned premiums by \$42 million for the first nine months of 2011 and increased the underwriting loss by a corresponding amount. Weather-related losses not considered part of specific catastrophe events, according to industry service provider Property Claims Service, also increased the underwriting loss. More details of property casualty insurance results are discussed below, including discussion of our commercial lines, personal lines and excess and surplus lines segments.

We measure and analyze property casualty underwriting results primarily by the combined ratio and its component ratios. The GAAP-basis combined ratio is the percentage of incurred losses plus all expenses per each earned premium dollar — the lower the ratio, the better the performance. An underwriting profit results when the combined ratio is below 100 percent. A combined ratio above 100 percent indicates that an insurance company's losses and expenses exceeded premiums.

The combined ratio can be affected significantly by catastrophe losses and other large losses as discussed in detail below. The combined ratio can also be affected by updated estimates of loss and loss expense reserves established for claims that occurred in prior periods, referred to as prior accident years. Net favorable development on prior accident year reserves, including reserves for catastrophe losses, improved the combined ratio by 9.8 percentage points in the first nine months of 2011 compared with 7.9 percentage points in the same period of 2010. Net favorable development for the first nine months of 2011 occurred primarily in our commercial casualty line of business as discussed in Commercial Lines Results of Operations on Page 32.

Our consolidated property casualty combined ratio for the third quarter of 2011 increased 6.7 percentage points and the nine-month ratio increased 12.1 points compared with the same periods of 2010, driven by catastrophe losses that were 8.2 and 12.4 points higher. The ratio for current accident year loss and loss expenses before catastrophe losses of 75.6 percent for the first nine months of 2011 rose 2.0 percentage points compared with the 73.6 percent accident year 2010 ratio measured as of December 31, 2010. Loss ratio improvements from more precise pricing were offset by the effect of reinsurance reinstatement premiums, by higher large losses and by higher weather-related estimated losses that were not identified as part of designated catastrophe events for the property casualty industry. Higher new large losses incurred increased the 2011 ratio by 1.3 percentage points. The effect of the \$42 million ceded to reinstate coverage layers of our property catastrophe reinsurance treaty increased the 2011 ratio by 1.4 percentage points.

The underwriting expense ratio was lower for the third quarter of 2011 compared with the same period a year ago, primarily due to higher earned premiums and lower technology-related costs. The ratio was lower for the first nine months of 2011 compared with the same period of 2010, primarily due to first-quarter 2010 provisions for matters involving prior years and related to Note 10, Commitments and Contingent Liabilities, Page 18.

(Dollars in millions)	Three months ended September 30,			Nine months ended September 30,		
	2011	2010	Change %	2011	2010	Change %
Agency renewal written premiums	\$ 730	\$ 677	8	\$ 2,155	\$ 2,044	5
Agency new business written premiums	115	109	6	334	307	9
Other written premiums	(54)	(50)	(8)	(151)	(110)	(37)
Net written premiums	791	736	7	2,338	2,241	4
Unearned premium change	(22)	7	nm	(94)	(62)	(52)
Earned premiums	\$ 769	\$ 743	3	\$ 2,244	\$ 2,179	3

The trends in net written premiums and earned premiums summarized in the table above reflect the effects of our premium growth strategies and what we believe to be slowly improving economic conditions, partially offset by higher ceded premiums to reinstate coverage layers of our property catastrophe reinsurance treaty and by ongoing strong competition in our markets. Consolidated property casualty net written premiums for the three and nine months ended September 30, 2011, increased \$55 million and \$97 million compared with the same periods of 2010. Each of our property casualty segments registered growth for both the three-month and nine-month periods ended September 30, 2011. Our premium growth initiatives from prior years continue to favorably affect current year growth, particularly as newer agency relationships mature over time. Improving insured exposure-level comparatives from the slow economic recovery also favorably affected premium growth. We discuss current initiatives in Highlights of Our Strategy and Supporting Initiatives, Page 24. The main drivers of trends for 2011 are discussed by segment on Pages 32 and 36.

Consolidated property casualty agency new business written premiums for the three and nine months ended September 30, 2011, increased \$6 million and \$27 million compared with the same periods of 2010. We continued to

experience new business growth related to initiatives for geographic expansion into new and underserved areas. Agents appointed during 2010 or 2011 produced an increase in standard lines new business of \$28 million for the first nine months of 2011 compared with the same period in 2010. As we appoint new agencies that choose to move accounts to us, we report these accounts as new business. While this business is new to us, in many cases it is not new to the agent. We believe these seasoned accounts tend to be priced more accurately than business that may be less familiar to our agent upon obtaining it from a competing agent.

Other written premiums – primarily including premiums ceded to our reinsurers as part of our reinsurance program – contributed negative \$4 million and negative \$41 million to net written premium growth for the three and nine months ended September 30, 2011, compared with the same periods of 2010. The nine-month change in other written premiums was primarily due to \$38 million of ceded premiums recorded during the second quarter plus \$4 million during the third quarter to reinstate coverage layers of our property catastrophe reinsurance treaty. The 3rd and 4th Event Cover described below contributed \$12 million of ceded premiums during the third-quarter and nine-month periods of 2011. The higher third-quarter ceded premiums were partially offset by a more favorable adjustment, compared with the third quarter of last year, for estimated direct written premiums of policies in effect but not yet processed. The adjustment had an immaterial effect on earned premiums.

Near the end of the second quarter of 2011, we purchased reinsurance to replenish coverage for certain layers of our property catastrophe treaty that were used by the catastrophe events discussed below. This coverage, also known as 3rd and 4th Event Cover, includes one automatic reinstatement provision. It provides reinsurance coverage for any single catastrophe event during the remainder of 2011 that causes losses between \$70 million and \$200 million. Coverage for 2011 single-event catastrophe losses above \$200 million and up to \$500 million remains in place under the original terms of our property catastrophe treaty effective January 1, 2011, and includes one automatic reinstatement provision. The estimated ceded premiums during the fourth quarter of 2011 for our property catastrophe reinsurance treaty are expected to total approximately \$4 million less than for the third quarter, assuming no additional reinstatement premiums.

Our property catastrophe treaty is an important capital management tool that helps reduce financial performance variability due to catastrophe loss experience as discussed below. Among other factors that can influence our reinsurance program decisions, we consider third-party catastrophe models that estimate potential losses from catastrophe events. During the first quarter of 2011, one of the modeling vendors we use released an updated model that indicates a 57 percent to 66 percent increase in modeled losses from a 1-in-100-year or 1-in-250-year hurricane event. We continue to study potential loss estimates from the updated model and have not yet determined how it may affect our 2012 reinsurance program. Consistent with our usual practice of periodically evaluating our reinsurance programs, we will consider changes to our property catastrophe treaty or alternative reinsurance structures.

Catastrophe losses contributed 12.0 and 18.9 percentage points to the combined ratio in the three and nine months ended September 30, 2011, compared with 3.8 and 6.5 percentage points in the same periods of 2010. The three- and nine-month ratios for 2011 included 0.7 and 0.7 percentage points from losses of \$5 million and \$16 million for our participation in assumed reinsurance treaties that spread the risk of very high catastrophe losses among many insurers. The majority of the nine-month assumed reinsurance losses were from two first-quarter 2011 earthquake events, one each in Japan and New Zealand. Most of the remainder was from the September 2010 earthquake event in New Zealand. The only assumed reinsurance treaty for which we have material exposure has been reserved at the \$7million policy limit for the Japan earthquake event.

The following table shows catastrophe losses incurred, net of reinsurance, as well as the effect of loss development on prior period catastrophe events. We individually list catastrophe events for which our incurred losses reached or exceeded \$5 million. Incurred losses from the April 22-28 tornado outbreak affecting several southern states, including the Tuscaloosa, Alabama area, are shown net of amounts expected to be recovered through our property catastrophe reinsurance treaty. The gross amount for that event is estimated at \$189 million, exceeding the single largest catastrophe event in our company's history prior to 2011. Incurred losses shown from the May 20-27 storm system that included Joplin, Missouri also are net of reinsurance, and now represent the single largest catastrophe event in our company's history. The gross amount for that event is estimated at \$238 million, including significant losses from hail in the Dayton, Ohio, area. The total gross amount of our losses incurred for all catastrophe events during the nine months ended September 30, 2011, is estimated at \$682 million.

Overview

Performance highlights for the commercial lines segment include:

- Premiums – Commercial lines earned premiums and net written premiums both grew during the third quarter and first nine months of 2011 primarily due to higher renewal and new business premiums that reflected improved pricing and premium growth initiatives. Premiums for our commercial casualty and workers' compensation business include the result of policy audits that adjust initial premium amounts based on differences between estimated and actual sales or payroll related to a specific policy. Audits contributed \$38 million to the \$22 million net increase in earned premiums for the first nine months of 2011 compared with the same period a year ago. The \$10 million increase in earned premiums during the third quarter of 2011, compared with the 2010 quarter, included a \$4 million increase from audit premiums as a component. Earned premiums for the first nine months of 2011 were reduced by \$24 million of ceded premiums to reinstate coverage layers of our property catastrophe reinsurance treaty, partially offsetting the period's net increase. The premiums table below analyzes other components of earned premiums.

Agency renewal written premiums, up 6 percent and 3 percent for the third quarter and first nine months of 2011, also largely reflected improving economic conditions, with growth for the nine-month period partly offset by lower pricing. Net written premiums from audits during the third quarter of 2011 netted to positive \$2 million. The year-over-year change from audits was favorable by \$8 million for the third quarter and \$26 million for the nine-month period, in part reflecting improving insured exposure-level comparatives from the slow economic recovery. We work with our agents to retain accounts with manageable risk characteristics that support the lower average prices prevailing in the marketplace. Our agents, assisted by our field associates who handle underwriting, claims, loss control or premium audit responsibilities, provide us with insights on local market conditions. We use such insights in making decisions intended to adequately price business to achieve target profit margins. We measure average changes in commercial lines renewal pricing as the rate of change in renewal premium for the new policy period compared with the premium for the expiring policy period, assuming no change in the level of insured exposures or policy coverage between those periods for respective policies. Our commercial lines policies averaged an estimated price change that was slightly positive during the third quarter of 2011, an improvement compared with a negative price change in the low-single-digit rate for both the first half of 2011 and the full-year 2010 average.

New business written premiums for commercial lines grew 9 percent for both the third quarter and first nine months of 2011 compared with the same periods last year. Our five newest states for our commercial lines operation – Texas, Colorado, Wyoming, Connecticut and Oregon – generated an increase in new business of approximately \$5 million for the first nine months of 2011, while the increase from other states in total was \$15 million or 8 percent.

Other written premiums included higher amounts ceded to reinsurers, including \$1 million and \$24 million for the three- and nine-month periods of 2011 to reinstate coverage layers of our property catastrophe reinsurance treaty. For the third quarter of 2011, the higher ceded premiums were partially offset by a more favorable adjustment, compared with the third quarter of last year, for estimated direct written premiums of policies in effect but not yet processed. The adjustment had an immaterial effect on earned premiums.

Commercial Lines Insurance Premiums

(Dollars in millions)	Three months ended September 30,			Nine months ended September 30,		
	2011	2010	Change %	2011	2010	Change %
Agency renewal written premiums	\$507	\$479	6	\$1,549	\$1,504	3
Agency new business written premiums	81	74	9	233	213	9
Other written premiums	(41)	(42)	2	(110)	(86)	(28)
Net written premiums	547	511	7	1,672	1,631	3
Unearned premium change	10	36	(72)	(42)	(23)	(83)
Earned premiums	\$557	\$547	2	\$1,630	\$1,608	1

- Combined ratio – The commercial lines combined ratio for the three and nine months ended September 30, 2011, increased compared with the same periods of 2010, driven by catastrophe losses that were 7.5 and 9.7 percentage points higher. The ratio for current accident year loss and loss expenses before catastrophe losses of 75.7 percent for the first nine months of 2011 rose 1.2 percentage points compared with the 74.5 percent accident year 2010 ratio measured as of December 31, 2010. Loss ratio improvements from more precise pricing were offset by the effect of reinsurance reinstatement premiums, by higher large losses and by higher weather-related estimated losses that were not identified as part of designated catastrophe events for the property casualty industry. Higher new large losses incurred, shown on the table on Page 34, increased the 2011 ratio by 1.9 percentage points. The effect of the \$24 million ceded to reinstate coverage layers of our property catastrophe reinsurance treaty increased the 2011 ratio by 1.1 percentage points.

The net effect of reserve development on prior accident years during the third quarter and first nine months of 2011 was favorable for commercial lines overall by \$54 million and \$184 million compared with net favorable development of \$52 million and \$154 million for the same periods in 2010. For the three and nine months ended September 30, 2011, most of the commercial lines favorable reserve development on prior accident years occurred in the commercial casualty line of business, which represented 84 percent of the nine-month commercial lines favorable development. The favorable reserve development recognized during the first nine months of 2011 for commercial casualty included approximately 60 percent for accident year 2010 and nearly 20 percent for accident years 2008 through 2009, and was primarily due to reduced volatility in paid losses, reduced volatility in projections of future calendar year trends and favorable case reserve development. Reserve estimates are inherently uncertain as described in our 2010 Annual Report on Form 10-K, Item 7, Property Casualty Insurance Loss and Loss Expense Obligations and Reserves, Page 82.

Our loss and loss expense ratio for workers' compensation remained high at 87.2 percent for the first nine months of 2011, but improved 10.6 percentage points compared with the first nine months of 2010 and 6.7 points compared with full-year 2010. As discussed in our 2010 Annual Report on Form 10-K, Item 7, Commercial Lines of Business Analysis, Page 58, predictive modeling for workers' compensation is expected to increase pricing accuracy, therefore

improving profitability and the related ratios over time. In addition to continued use and refinement of predictive analytics, we use specialists who have extensive experience in underwriting workers' compensation exposures, and claims associates who specialize in workers' compensation claims, and we are increasing our use of loss control risk evaluation services for these accounts. Specialization and timely handling of claims through direct reporting of workers' compensation claims, implemented in early 2010, should enable our claims representatives to more effectively manage and contain the costs of claims that have already occurred, as well as future claims. Loss control services should help prevent worker-related accidents or lessen the severity of injuries when accidents occur.

The commercial lines underwriting expense ratio for third-quarter 2011 improved due to higher earned premiums and lower commission expenses. For the first nine months of 2011 it increased compared with the same periods of 2010, primarily due to earned premiums that were lowered by \$24 million of ceded premiums to reinstate coverage layers of our property catastrophe reinsurance treaty.

Underwriting results and related measures for the combined ratio are summarized in the first table of Commercial Lines Insurance Results of Operations. The tables and discussion below provide additional details for certain primary drivers of underwriting results.

Commercial Lines Insurance Losses by Size

(Dollars in millions)	Three months ended September 30,			Nine months ended September 30,		
	2011	2010	Change %	2011	2010	Change %
New losses greater than \$4,000,000	\$ 18	\$ 17	6	\$ 34	\$ 34	1
New losses \$1,000,000-\$4,000,000	40	28	45	110	82	35
New losses \$250,000-\$1,000,000	45	37	23	122	117	4
Case reserve development above \$250,000	52	62	(17)	129	123	4
Total large losses incurred	155	144	8	395	356	11
Other losses excluding catastrophe losses	131	151	(13)	421	471	(11)
Catastrophe losses	58	17	230	241	84	188
Total losses incurred	\$ 344	\$ 312	10	\$ 1,057	\$ 911	16
Ratios as a percent of earned premiums:	Pt. Change			Pt. Change		
New losses greater than \$4,000,000	3.2 %	3.1 %	0.1	2.1 %	2.1 %	0.0
New losses \$1,000,000-\$4,000,000	7.3	5.1	2.2	6.8	5.1	1.7
New losses \$250,000-\$1,000,000	8.1	6.7	1.4	7.5	7.3	0.2
Case reserve development above \$250,000	9.3	11.4	(2.1)	7.9	7.7	0.2
Total large loss ratio	27.9	26.3	1.6	24.3	22.2	2.1
Other losses excluding catastrophe losses	23.5	27.6	(4.1)	25.8	29.3	(3.5)
Catastrophe losses	10.4	3.2	7.2	14.7	5.2	9.5
Total loss ratio	61.8 %	57.1 %	4.7	64.8 %	56.7 %	8.1

We continue to monitor new losses and case reserve increases greater than \$250,000 for trends in factors such as initial reserve levels, loss cost inflation and claim settlement expenses. Our analysis continues to indicate no unexpected concentration of these large losses and case reserve increases by risk category, geographic region, policy inception, agency or field marketing territory. The third-quarter commercial lines total large losses incurred of \$155 million, net of reinsurance, were significantly higher than the \$119 million quarterly average during 2010 and somewhat higher than the \$144 million for the 2010 third quarter. The ratio for these large losses and case reserve increases was 1.6 percentage points higher compared with last year's third quarter, primarily due to higher incurred losses for fires. The third-quarter increase in losses added to the ratio for total large losses incurred for the first nine months of 2011, which also was higher than in 2010 primarily due to incurred losses from commercial fires. We believe results for the three-month and nine-month periods largely reflected normal fluctuations in loss patterns and normal variability in large case reserves for claims above \$250,000.

Commercial Lines of Business Analysis

Approximately 95 percent of our commercial lines premiums relate to accounts with coverages from more than one of our business lines. As a result, we believe that the commercial lines segment is best measured and evaluated on a segment basis. However, we provide line of business data to summarize premium and loss trends separately for each line. The ratios shown in the table below are components of loss and loss expenses as a percentage of earned premiums.

Cincinnati Financial Corporation Third-Quarter 2011 10-Q

Page 35

As discussed above, the loss and loss expense ratio component of the combined ratio is an important measure of underwriting profit and performance. Catastrophe losses are volatile and can distort short-term profitability trends, particularly for certain lines of business. Development of loss and loss expense reserves on prior accident years can also distort trends in measures of profitability for recently written business. To illustrate these effects, we separate their impact on the ratios shown in the table above. For the three and nine months ended September 30, 2011, the commercial line of business with the most significant profitability challenge was workers' compensation, assuming the property portion of applicable lines of business have future weather-related loss experience that returns to our longer-term historical average. As discussed above, our actions to improve pricing and reduce loss costs for workers' compensation are expected to benefit future profitability trends, and during the first nine months of 2011 the line's loss and loss expense ratio improved 10.6 percentage points compared with the first nine months of 2010 and 6.7 points compared with full-year 2010.

Overview

Performance highlights for the personal lines segment include:

- Premiums – Personal lines earned premiums and net written premiums for the three and nine months ended September 30, 2011, again grew due to higher renewal and new business premiums. The increase reflected improved pricing, partially offset by ceded premiums to reinstate coverage layers of our property catastrophe reinsurance treaty. The premiums table below analyzes other components of earned premiums.

Agency renewal written premiums increased 11 percent and 10 percent in the third quarter and first nine months of 2011 because of rate increases, strong policy retention rates and premium growth initiatives. Various rate changes were implemented beginning in October 2009, including increases for our homeowner line of business averaging approximately 6 percent, with some individual policy rate increases in the double-digit range. Homeowner rate changes averaging approximately 7 percent were implemented beginning the fourth quarter of 2010 for states representing the majority of our personal lines business. For our personal auto line of business, rate changes with a low-single-digit average increase were implemented beginning in the fourth quarter of 2010. For our homeowner lines of business, we are targeting rate changes for late 2011 and early 2012 that are slightly higher than the respective rate changes from late 2010. We are targeting early 2012 rate changes for personal auto that average a small net positive rate change in total, while some individual policies may experience lower rates based on enhanced pricing precision enabled by predictive models.

Personal lines new business written premium growth has started to moderate following several quarters of strong growth, with increases of less than 1 percent and 9 percent for the three and nine months ended September 30, 2011, compared with 2010 periods. We continue to believe we are

successful in attracting more of our agents' preferred business that is priced more accurately based on the insured exposure. Some of what we report as new business came from accounts that were not new to our agents. We believe our agents' seasoned accounts tend to be priced more accurately than business that may be less familiar to them.

Other written premiums – which primarily include premiums ceded to our reinsurers as part of our reinsurance program – contributed negative \$6 million and negative \$19 million to net written premium growth for the three and nine months ended September 30, 2011, compared with the same periods of 2010. The third-quarter decrease was primarily due to \$5 million of ceded premiums for our 3rd and 4th Event Cover from our property catastrophe reinsurance program, discussed on Page 30. The nine-month decrease was primarily due to \$18 million of ceded premiums, including \$15 million recorded during the second quarter, plus \$3 million during the third quarter, to reinstate coverage layers of our property catastrophe reinsurance treaty.

We continue to implement strategies discussed in our 2010 Annual Report on Form 10-K, Item 1, Our Business and Our Strategy, Page 3, to enhance our response to marketplace changes and help achieve our long-term objectives for personal lines growth and profitability. These strategies include expansion during recent years into four western states with historical industry catastrophe loss ratios that are significantly better than our historical ratios for states where we operated prior to that expansion.

Personal Lines Insurance Premiums

(Dollars in millions)	Three months ended September 30,			Nine months ended September 30,		
	2011	2010	Change %	2011	2010	Change %
Agency renewal written premiums	\$ 209	\$ 189	11	\$ 570	\$ 519	10
Agency new business written premiums	25	25	0	73	67	9
Other written premiums	(12)	(6)	(100)	(38)	(19)	(100)
Net written premiums	222	208	7	605	567	7
Unearned premium change	(29)	(26)	(12)	(42)	(32)	(31)
Earned premiums	\$ 193	\$ 182	6	\$ 563	\$ 535	5

- Combined ratio – The personal lines combined ratio for the three and nine months ended September 30, 2011, rose compared with the same periods of 2010, primarily due to weather-related catastrophe losses that were 10.8 and 20.7 percentage points higher. The 75.2 percent ratio for current accident year loss and loss expenses before catastrophe losses for the first nine months of 2011 rose 4.8 percentage points compared with the 70.4 percent accident year 2010 ratio measured as of December 31, 2010. Pricing changes that benefited the current accident year ratio were offset by the effect of reinsurance reinstatement premiums and by higher weather-related estimated losses that were not identified as part of designated catastrophe events for the property casualty industry, typically referred to as non-catastrophe weather losses. The effect of the \$18 million ceded to reinstate coverage layers of our property catastrophe reinsurance treaty increased the 2011 ratio by 2.4 percentage points. For our homeowner line of business alone, non-catastrophe weather losses from wind, hail and lightning were \$16 million higher during the first nine months of 2011 compared with the same period of 2010, raising the 2011 loss ratio by 2.8 percentage points.

In addition to the rate increases discussed above, we continue to refine our pricing to better match premiums to the risk of loss on individual policies. We also continue to increase our pricing sophistication by incorporating attributes of risk that characterize the insured exposure. The results of improved pricing per risk and broad-based rate increases are expected to improve the combined ratio over the next several quarters. In addition, greater geographic diversification is expected over time to reduce the volatility of homeowner loss ratios attributable to weather-related

catastrophe losses. During the first quarter of 2011, we implemented an additional reinsurance program solely to decrease from \$6 million to \$4 million the amount of loss we retain on new large homeowner losses. Our homeowner policies in force during 2009 and 2010 experienced one new loss each year in that size range. No new homeowner losses of that magnitude were incurred during the first nine months of 2011.

Catastrophe losses accounted for 16.8 and 31.7 percentage points of the combined ratio for the three and nine months ended September 30, 2011, compared with 6.0 and 11.0 percentage points for the same periods last year. The 10-year annual average through 2010 for the personal lines segment was 8.7 percentage points, and the five-year annual average was 10.2 percentage points.

Personal lines reserve development on prior accident years continued to trend favorably during the third quarter and first nine months of 2011, more favorably than during the same periods of 2010. Nearly half of the favorable reserve development on prior accident years recognized during the first nine months of 2011 occurred in the other personal line of business, and the remainder was split roughly even between personal auto and homeowner. Approximately half of the personal lines

favorable reserve development recognized during the first nine months of 2011 was for accident year 2010 and approximately one-third for accident years 2008 through 2009. Reserve estimates are inherently uncertain as described in our 2010 Annual Report on Form 10-K, Item 7, Property Casualty Insurance Loss and Loss Expense Obligations and Reserves, Page 82.

The underwriting expense ratio rose for the third quarter and declined for first nine months of 2011 compared with the same periods of 2010. The primary reason for the third-quarter increase was higher commission expenses. The lower nine-month ratio was primarily due to the first-quarter 2010 provisions for matters involving prior years and related to Note 10, Commitments and Contingent Liabilities, Page 18.

Personal Lines Insurance Losses by Size

(Dollars in millions)	Three months ended September 30,			Nine months ended September 30,		
	2011	2010	Change %	2011	2010	Change %
New losses greater than \$4,000,000	\$ 0	\$ 0	nm	\$ 0	\$ 0	nm
New losses \$1,000,000-\$4,000,000	4	5	(20)	17	15	8
New losses \$250,000-\$1,000,000	11	7	59	35	27	29
Case reserve development above \$250,000	4	4	5	11	8	39
Total large losses incurred	19	16	21	63	50	24
Other losses excluding catastrophe losses	100	88	14	279	250	12
Catastrophe losses	32	11	191	177	59	201
Total losses incurred	\$ 151	\$ 115	31	\$ 519	\$ 359	45
Ratios as a percent of earned premiums:						
	Pt. Change			Pt. Change		
New losses greater than \$4,000,000	0.0 %	0.0 %	0.0	0.0 %	0.0 %	0.0
New losses \$1,000,000-\$4,000,000	2.2	2.8	(0.6)	3.0	2.9	0.1
New losses \$250,000-\$1,000,000	6.0	4.0	2.0	6.1	5.0	1.1
Case reserve development above \$250,000	1.9	2.0	(0.1)	2.0	1.5	0.5
Total large losses incurred	10.1	8.8	1.3	11.1	9.4	1.7
Other losses excluding catastrophe losses	52.0	48.4	3.6	49.6	46.6	3.0
Catastrophe losses	16.4	6.0	10.4	31.4	11.0	20.4
Total loss ratio	78.5 %	63.2 %	15.3	92.1 %	67.0 %	25.1

We continue to monitor new losses and case reserve increases greater than \$250,000 for trends in factors such as initial reserve levels, loss cost inflation and claim settlement expenses. Our analysis continues to indicate no unexpected concentration of these large losses and case reserve increases by risk category, geographic region, policy inception, agency or field marketing territory. In the third quarter of 2011, the ratio for these losses and case reserve increases, net of reinsurance, was 1.3 percentage points higher compared with last year's third quarter, primarily due to a higher number of personal auto claims and incurred losses. The nine-month result rose 1.7 percentage points primarily due to a higher number of large homeowner claims and incurred losses related to fires during the first quarter and from the higher personal auto incurred losses during the third quarter of 2011. We believe results for the three- and nine-month periods ended September 30, 2011, largely reflected normal fluctuations in loss patterns and normal variability in large case reserves for claims above \$250,000.

Personal Lines of Business Analysis

We prefer to write personal lines coverages on an account basis that includes both auto and homeowner coverages as well as coverages from the other personal business line. As a result, we believe that the personal lines segment is best measured and evaluated on a segment basis. However, we provide the line of business data to summarize premium and loss trends separately for each line. The ratios shown in the table below are components of loss and loss expenses as a percentage of earned premiums.

(Dollars in millions)	Three months ended September 30,			Nine months ended September 30,		
	2011	2010	Change %	2011	2010	Change %
Personal auto:						
Written premiums	\$ 107	\$ 98	9	\$ 293	\$ 268	9
Earned premiums	94	86	9	273	250	9
Current accident year before catastrophe losses	66.6 %	68.3 %		67.4 %	67.3 %	
Current accident year catastrophe losses	1.5	0.2		4.3	1.5	
Prior accident years before catastrophe losses	1.7	(0.3)		(2.8)	(1.9)	
Prior accident years catastrophe losses	(0.1)	(0.1)		(0.2)	(0.2)	
Total loss and loss expenses ratio	69.7 %	68.1 %		68.7 %	66.7 %	
Homeowner:						
Written premiums	\$ 87	\$ 83	5	\$ 233	\$ 224	4
Earned premiums	74	72	3	216	214	1
Current accident year before catastrophe losses	86.2 %	72.0 %		84.5 %	69.8 %	
Current accident year catastrophe losses	40.3	15.5		74.7	25.8	
Prior accident years before catastrophe losses	(6.1)	(0.9)		(1.4)	0.6	
Prior accident years catastrophe losses	(1.8)	(2.1)		(2.7)	(1.3)	
Total loss and loss expenses ratio	118.6 %	84.5 %		155.1 %	94.9 %	
Other personal:						
Written premiums	\$ 28	\$ 27	4	\$ 79	\$ 75	5
Earned premiums	25	24	4	74	71	4
Current accident year before catastrophe losses	87.0 %	70.1 %		77.0 %	65.1 %	
Current accident year catastrophe losses	10.4	4.7		16.1	4.7	
Prior accident years before catastrophe losses	(36.4)	(24.1)		(17.6)	(17.7)	

Prior accident years catastrophe losses	(0.6)	(0.4)	(0.6)	(0.5)
Total loss and loss expenses ratio	60.4 %	50.3 %	74.9 %	51.6 %

As discussed above, the loss and loss expense ratio component of the combined ratio is an important measure of underwriting profit and performance. Catastrophe losses are volatile and can distort short-term profitability trends, particularly for certain lines of business. Development of loss and loss expense reserves on prior accident years can also distort trends in measures of profitability for recently written business. To illustrate these effects, we separate their impact on the ratios shown in the table above. For the three and nine months ended September 30, 2011, the personal line of business with the most significant profitability challenge was homeowner, assuming the property portion of other lines of business have future weather-related loss experience that returns to our longer-term historical average. As discussed above, we continue actions to improve pricing per risk and overall rates, which are expected to improve future profitability. In addition, we anticipate that the long-term future average for the catastrophe loss ratio would improve due to gradual geographic diversification into states less prone to catastrophe losses.

Excess And Surplus Lines Insurance Results of Operations

(Dollars in millions)	Three months ended September 30,			Nine months ended September 30,

Overview

Performance highlights for the excess and surplus lines segment include:

- Premiums – Excess and surplus lines earned premiums and net written premiums grew for the three and nine months ended September 30, 2011. Growth in renewal written premiums accounted for most of the increase.

Renewal written premiums grew 56 percent for the third quarter of 2011, compared with the same period of 2010, and grew 71 percent for the nine-month period, primarily due to the opportunity to renew many accounts for the first time as described in our 2010 Annual Report on Form 10-K, Item 7, Excess and Surplus Lines Insurance Results of Operation, Page 70. Renewal pricing changes also accounted for some of the growth, as our excess and surplus lines policies' average estimated pricing change continued to increase in a low- to mid-single-digit range. We measure average changes in excess and surplus lines renewal pricing as the rate of change in renewal premium for the new policy period compared with the premium for the expiring policy period, assuming no change in the level of insured exposures or policy coverage between those periods for respective policies.

New business written premium declined somewhat during the third quarter, reflecting careful underwriting in a highly competitive market, and grew modestly during first nine months of 2011, at roughly half the rate of the full-year 2010 increase of 9 percent. Some of what we report as new business came from accounts that were not new to our agents. We believe our agents' seasoned accounts tend to be priced more accurately than business that may be less familiar to them.

Excess and Surplus Lines Insurance Premiums

(Dollars in millions)	Three months ended September 30,			Nine months ended September 30,		
	2011	2010	Change %	2011	2010	Change %
Renewal written premiums	\$ 14	\$ 9	56	\$ 36	\$ 21	71
New business written premiums	9	10	(10)	28	27	4
Other written premiums	(1)	(2)	50	(3)	(5)	40
Net written premiums	22	17	29	61	43	42
Unearned premium change	(3)	(3)	0	(10)	(7)	(43)
Earned premiums	\$ 19	\$ 14	36	\$ 51	\$ 36	42

- Combined ratio – The excess and surplus lines combined ratio for the three and nine months ended September 30, 2011, improved 36.2 and 32.4 percentage points compared with the same periods of 2010, primarily due to lower ratios for current accident year loss and loss expenses and higher levels of net favorable reserve development on prior accident years. The 78.9 percent ratio for current accident year loss and loss expenses before catastrophe losses for the first nine months of 2011 decreased 4.9 percentage points compared with the 83.8 percent accident year 2010 ratio measured as of December 31, 2010. Favorable trends for both reported loss experience and reserves for estimated losses incurred but not reported (IBNR) drove the lower 2011 ratio.

Catastrophe losses accounted for 2.5 and 3.2 percentage points of the combined ratio for the three and nine months ended September 30, 2011, compared with negative 0.1 and 1.7 percentage points in the same periods of 2010.

Excess and surplus reserve development on prior accident years trended very favorably for the three and nine months ended September 30, 2011. Both losses and loss expenses trended favorably, with loss expenses representing the larger amount. Reserve estimates are inherently uncertain as described in our 2010 Annual Report on Form 10-K, Item 7, Property Casualty Insurance Loss and Loss Expense Obligations and Reserves, Page 82.

The underwriting expense ratio for the third quarter of 2011, compared with the same period of 2010, rose 5.3 percentage points while the nine-month ratio rose 1.6 percentage points. Higher commission expenses and a larger allocation of technology related costs were largely responsible for the third quarter increase. The nine-month ratio increased primarily due to higher commission expenses.

Life Insurance Results of Operations

Life insurance segment profit	\$ (3)	\$ (1)	(200)	\$ (1)	\$ 1	nm

Overview

Performance highlights for the life insurance segment include:

- **Revenues** – Revenues were higher for the three and nine months ended September 30, 2011, primarily due to higher earned premiums from term life insurance products.

Gross in-force life insurance policy face amounts increased to \$76.911 billion at September 30, 2011, from \$74.124 billion at year-end 2010.

Fixed annuity deposits received for the three and nine months ended September 30, 2011, were \$18 million and \$107 million compared with \$37 million and \$153 million for the same periods of 2010. Fixed annuity deposits have a minimal impact to earned premiums because deposits received are initially recorded as liabilities with a portion representing profit subsequently earned over time. We do not write variable or equity indexed annuities.

Life Insurance Premiums

(Dollars in millions)	Three months ended September 30,			Nine months ended September 30,		
	2011	2010	Change %	2011	2010	Change %
Term life insurance	\$ 27	\$ 25	8	\$ 79	\$ 72	10
Universal life insurance	10	10	0	24	29	(17)
Other life insurance, annuity, and disability income products	6	6	0	20	19	5
Net earned premiums	\$ 43	\$ 41	5	\$ 123	\$ 120	3

- **Profitability** – Our life insurance segment typically reports a small profit or loss on a GAAP basis because most of its investment income is included in our investment segment results. We include only investment income credited to contract holders (including interest assumed in life insurance policy reserve calculations) in our life insurance segment results. The loss of \$1 million for our life insurance segment in the first nine months of 2011 compares with profit of \$1 million for the same period of 2010, primarily due to less favorable mortality experience.

Although we report most of our life insurance company investment income in our investments segment results, we recognize that assets under management, capital appreciation and investment income are integral to evaluation of the success of the life insurance segment because of the long duration of life products. On a basis that includes investment

income and realized gains or losses from life insurance related invested assets, the life insurance company reported a net profit of \$4 million and \$8 million in the three and nine months ended September 30, 2011, compared with a net profit of \$8 million and \$24 million for the same periods of 2010. The life insurance company portfolio had after-tax realized investment losses of \$2 million and \$17 million in the three and nine months ended September 30, 2011, compared with after-tax realized investment gains of \$1 million and after-tax realized investment losses of less than \$1 million for the same periods of 2010. The realized investment losses during the first nine months were primarily due to impairment of certain securities during the first quarter as discussed in Investments Results of Operations on Page 43.

Life segment benefits and expenses consist principally of contract holders' (policyholders') benefits incurred related to traditional life and interest-sensitive products and operating expenses incurred, net of deferred acquisition costs. Total benefits rose in the first nine months of 2011 due to increased levels of net death claims. Although net death claims increased, they remained within our range of pricing expectations. Operating expenses decreased slightly from the first nine months of 2010 as a modest increase in underwriting expenses related to third-party fees for the administration of closed blocks of life and health policies was offset by a slight decrease in commission expense related to decreased annuity deposits received during the nine months ended September 30, 2011.

Investments Results of Operations

Overview

The investments segment contributes investment income and realized gains and losses to results of operations. Investments traditionally are our primary source of pretax and after-tax profits.

Investment Income

Pretax investment income increased 2 percent and 1 percent for the three and nine months ended September 30, 2011, compared with the same periods of 2010. Investment income from interest on bonds grew primarily due to a larger portfolio base, with higher levels of fixed-maturity invested assets offsetting lower average yields. Higher dividend income for the nine-month period reflected rising dividend rates, while the lower third-quarter amount reflected the variable timing of ex-dividend dates for declared dividends. Average yields in the table below are based on the average invested asset and cash amounts indicated in the table, using fixed-maturity securities valued at amortized cost and all other securities at fair value. In our 2010 Annual Report on Form 10-K, Item 1, Investments Segment, Page 19 and Item 7, Investments Outlook, Page 78, we discussed our portfolio strategies. We discuss risks related to our investment income and our fixed-maturity and equity investment portfolios in Item 3, Quantitative and Qualitative Disclosures About Market Risk, Page 50.

We continue to position our portfolio with consideration to both the challenges presented by the current low interest rate environment and the risks presented by potential future inflation. As bonds in our generally laddered portfolio mature or are called over the near term, we will be challenged to replace their current yield. As discussed in our 2010 Annual Report on Form 10-K, Item 1, Investments Segment, Fixed-maturity and Short-term Investments, Page 20, approximately 17 percent of our fixed-maturity investments mature during 2011 through 2013 with an average pretax yield-to-amortized cost of 5.2 percent, including 1.3 percent during the last quarter of 2011 or the first quarter of 2012 yielding 5.1 percent. While our bond portfolio more than covers our insurance reserve liabilities, we believe our diversified common stock portfolio of mainly blue chip, dividend-paying companies represents one of our best investment opportunities for the long term.

Net Realized Gains and Losses

We reported net realized investment losses of \$2 million and gains of \$77 million in the three and nine months ended September 30, 2011, as net gains from investment sales and bond calls were partially offset by other-than-temporary impairment (OTTI) charges. OTTI charges were \$3 million and \$33 million during the third quarter and first nine months of 2011. We reported net realized investment gains of \$155 million and \$140 million in the three and nine months ended September 30, 2010, as net gains from investment sales and bond calls offset OTTI charges.

Investment gains or losses are recognized upon the sales of investments or as otherwise required under GAAP. The timing of realized gains or losses from sales can have a material effect on results in any quarter. However, such gains or losses usually have little, if any, effect on total shareholders' equity because most equity and fixed-maturity investments are carried at fair value, with the unrealized gain or loss included as a component of other comprehensive income. Accounting requirements for OTTI charges for the fixed-maturity portfolio are disclosed in our 2010 Annual Report on Form 10-K, Item 8, Note 1, Summary of Significant Accounting Policies, Page 108.

The total net realized investment gains for the first nine months of 2011 include:

- \$97 million in gains from the sale of various common stock holdings.
- \$10 million in net gains from fixed-maturity security sales and calls.
- \$33 million in OTTI charges to write down holdings of equities and fixed maturities.

The \$33 million in OTTI charges included approximately \$30 million from AllianceBernstein Holding L.P. (NYSE:AB) common stock and \$3 million from six fixed-maturity securities.

Of the 2,728 securities in the portfolio, two equity securities were trading below 70 percent of amortized cost at September 30, 2011. The fair value on the two equity securities was \$48 million with a \$27 million unrealized loss position. Our asset impairment committee regularly monitors the portfolio, including a quarterly review of the entire portfolio for potential OTTI charges. We believe that if the improving liquidity in the markets were to reverse, or the economic recovery were to significantly stall, we could experience declines in portfolio values and possible additional OTTI charges.

The table below provides additional detail for OTTI charges.

Cincinnati Financial Corporation Third-Quarter 2011 10-Q

Page 44

Other

We report as Other the non-investment operations of the parent company and a non-insurer subsidiary, CFC Investment Company.

Losses before income taxes for Other were largely driven by interest expense from debt of the parent company.

Taxes

We had \$8 million and \$42 million of income tax benefit in the three and nine months ended September 30, 2011, compared with \$65 million and \$76 million of income tax expense for the same periods of 2010. The effective tax rate for the three and nine months ended September 30, 2011, was negative 72.7 percent and positive 420.0 percent compared with positive 29.4 percent and positive 23.2 percent for the same periods last year.

The change in our effective tax rate was primarily due to changes in pretax income from underwriting results, changes in investment income and the amount of realized investment gains and losses.

Historically, we have pursued a strategy of investing some portion of cash flow in tax-advantaged fixed-maturity and equity securities to minimize our overall tax liability and maximize after-tax earnings. See Tax-Exempt Fixed Maturities, Page 52 for further discussion on municipal bond purchases in our fixed-maturity investment portfolio. For our insurance subsidiaries, approximately 85 percent of income from tax-advantaged fixed-maturity investments is exempt from federal tax. Our non-insurance companies own an immaterial amount of tax-advantaged fixed-maturity investments. For our insurance subsidiaries, the dividend received deduction, after the dividend proration of the 1986 Tax Reform Act, exempts approximately 60 percent of dividends from qualified equities from federal tax. For our non-insurance companies, the dividend received deduction exempts 70 percent of dividends from qualified equities. Details about our effective tax rate are found in our 2010 Annual Report on Form 10-K, Item 8, Note 11, Income Taxes, Page 120, and in Item 1, Note 11 – Income Taxes, Page 18.

Liquidity and Capital Resources

At September 30, 2011, shareholders' equity was \$4.786 billion compared with \$5.032 billion at December 31, 2010. Total debt was \$894 million at September 30, 2011, compared with \$839 million at December 31, 2010. At September 30, 2011, cash and cash equivalents totaled \$308 million compared with \$385 million at December 31, 2010.

Sources of Liquidity

Subsidiary Dividends

Our lead insurance subsidiary declared dividends of \$120 million to the parent company during the first nine months of 2011 compared with \$170 million for the same period of 2010. The lower amount of insurance subsidiary dividends for 2011 was driven by higher catastrophe losses. For the full-year 2010, subsidiary dividends declared totaled \$220 million. State of Ohio regulatory requirements restrict the dividends our insurance subsidiary can pay. During 2011, total dividends that our insurance subsidiary could pay to our parent company without regulatory approval are approximately \$378 million.

Investing Activities

Investment income is a source of liquidity for both the parent company and its insurance subsidiary. We continue to focus on portfolio strategies to balance near-term income generation and long-term book value growth.

Parent company obligations can be funded with income on investments held at the parent company level or through sales of securities in that portfolio, although we prefer to follow an investment philosophy seeking to compound cash flows over the long term. These sources of capital can help minimize subsidiary dividends to the parent company, protecting insurance subsidiary capital.

See our 2010 Annual Report on Form 10-K, Item 1, Investment Segment, Page 19, for a discussion of our historic investment strategy, portfolio allocation and quality.

Insurance Underwriting

Our property casualty and life insurance underwriting operations provide liquidity because we generally receive premiums before paying losses under the policies purchased with those premiums. After satisfying our cash requirements, we use excess cash flows for investment, increasing future investment income.

Historically, cash receipts from property casualty and life insurance premiums, along with investment income, have been more than sufficient to pay claims, operating expenses and dividends to the parent company.

The table below shows a summary of cash flow for property casualty insurance (direct method):

(Dollars in millions)	Three months ended September 30,		Nine months ended September 30,	
	2011	2010	2011	2010
Premiums collected	\$ 795	\$ 755	\$ 2,321	\$ 2,200
Loss and loss expenses paid	(566)	(505)	(1,696)	(1,372)
Commissions and other underwriting expenses paid	(236)	(232)	(759)	(743)
Insurance subsidiary cash flow from underwriting	(7)	18	(134)	85

Investment income received	91	97	270	272
Insurance operating cash flow	\$ 84	\$ 115	\$ 136	\$ 357

Collected premiums for property casualty insurance are up \$121 million for the first nine months of 2011, but the increase was more than offset by a \$324 million increase in loss and loss expenses paid, largely due to higher catastrophe losses paid.

We discuss our future obligations for claims payments and for underwriting expenses in our 2010 Annual Report on Form 10-K, Item 7, Contractual Obligations, Page 81, and Other Commitments, also on Page 81.

Capital Resources

At September 30, 2011, our debt-to-total-capital ratio rose to 15.7 percent, with \$790 million in long-term debt and \$104 million in borrowing on our revolving short-term lines of credit. The source of the short-term borrowing was the \$150 million line of credit described in our 2010 Annual Report on Form 10-K, Item 7, Short-Term Debt, Page 80. During the third quarter of 2011 there was a \$55 million increase to the June 30, 2011, balance of \$49 million in short-term debt. The balance was \$49 million throughout 2010. The parent company borrowed an additional \$55 million in the third quarter primarily to fund share repurchases using our relatively low-cost source of borrowing. Based on our present capital requirements, we do not anticipate a material increase in debt levels during the remainder of 2011. As a result, we expect changes in our debt-to-total-capital ratio to continue to be largely a function of the contribution of unrealized investment gains or losses to shareholders' equity.

We provide details of our three long-term notes in our 2010 Annual Report on Form 10-K, Item 8, Note 8, Senior Debt, Page 118. None of the notes are encumbered by rating triggers.

Among the four independent ratings firms that also award insurer financial strength ratings to our property casualty and life companies, no changes to our debt ratings have occurred in 2011. Our debt ratings are discussed in our 2010 Annual Report on Form 10-K, Item 7, Liquidity and Capital Resources, Additional Sources of Liquidity, Page 79.

Off-Balance Sheet Arrangements

We do not use any special-purpose financing vehicles or have any undisclosed off-balance sheet arrangements (as that term is defined in applicable SEC rules) that are reasonably likely to have a current or future material effect on the company's financial condition, results of operation, liquidity, capital expenditures or capital resources. Similarly, the company holds no fair-value contracts for which a lack of marketplace quotations would necessitate the use of fair-value techniques.

Uses of Liquidity

Our parent company and insurance subsidiary have contractual obligations and other commitments. In addition, one of our primary uses of cash is to enhance shareholder return.

Contractual Obligations

In our 2010 Annual Report on Form 10-K, Item 7, Contractual Obligations, Page 81, we estimated our future contractual obligations as of December 31, 2010. There have been no material changes to our estimates of future contractual obligations.

Other Commitments

In addition to our contractual obligations, we have other property casualty operational commitments.

- **Commissions** – Commissions paid were \$456 million in the first nine months of 2011. Commission payments generally track with written premiums, except for annual profit-sharing commissions typically paid during the first quarter of the year.
- **Other underwriting expenses** – Many of our underwriting expenses are not contractual obligations, but reflect the ongoing expenses of our business. Non-commission underwriting expenses paid were \$303 million in the first nine months of 2011.
- **In addition to contractual obligations for hardware and software**, we anticipate capitalizing approximately \$5 million in spending for key technology initiatives in 2011. Capitalized development costs related to key technology initiatives were \$4 million in the first nine months of 2011. These activities are conducted at our discretion, and we have no material contractual obligations for activities planned as part of these projects.

We contributed \$35 million to our qualified pension plan during the first quarter of 2011. We do not anticipate further contributions during the remainder of 2011.

Investing Activities

After fulfilling operating requirements, we invest cash flows from underwriting, investment and other corporate activities in fixed-maturity and equity securities on an ongoing basis to help achieve our portfolio objectives. We discuss our investment strategy and certain portfolio attributes in Item 3, Quantitative and Qualitative Disclosures about Market Risk, Page 50.

Uses of Capital

Uses of cash to enhance shareholder return include dividends to shareholders. In February and May 2011, the board of directors declared a regular quarterly cash dividend of 40 cents per share. In August 2011, the regular quarterly cash dividend was declared at 40.25 cents per share for an indicated annual rate of \$1.61 per share. During the first nine months of 2011, we used \$191 million to pay cash dividends to shareholders.

Property Casualty Insurance Reserves

For the business lines in the commercial and personal lines insurance segments, and in total for the excess and surplus lines segment, the following table detail gross reserves among case, IBNR and loss expense reserves, net of salvage and subrogation reserves. Reserving practices are discussed in our 2010 Annual Report on Form 10-K, Item 7, Property Casualty Insurance Loss and Loss Expense Obligations and Reserves, Page 82.

The rise in total gross reserves was primarily due to higher case and IBNR reserves for our commercial property, specialty packages and homeowner lines of business. Catastrophe and non-catastrophe weather losses accounted for most of the increase.

Property and Casualty Gross Reserves

Life Insurance Reserves

Gross life policy reserves were \$2.179 billion at September 30, 2011, compared with \$2.034 billion at year-end 2010, reflecting continued growth in fixed annuities and life insurance policies in force. We discuss our life insurance reserving practices in our 2010 Annual Report on Form 10-K, Item 7, Life Insurance Policyholder Obligations and Reserves, Page 89.

Other Matters

Significant Accounting Policies

Our significant accounting policies are discussed in our 2010 Annual Report on Form 10-K, Item 8, Note 1, Summary Of Significant Accounting Policies, Page 105, and updated in Item 1, Note 1, Accounting Policies, beginning on Page 7.

In conjunction with those discussions, in the Management's Discussion and Analysis in the 2010 Annual Report on Form 10-K, management reviewed the estimates and assumptions used to develop reported amounts related to the most significant policies. Management discussed the development and selection of those accounting estimates with the audit committee of the board of directors.

Fair Value Measurements

Valuation of Financial Instruments

Valuation of financial instruments, primarily securities held in our investment portfolio, is a critical component of our interim financial statement preparation. Fair Value Measurements and Disclosures, ASC 820-10, defines fair value as the exit price or the amount that would be 1) received to sell an asset or 2) paid to transfer a liability in an orderly transaction between marketplace participants at the measurement date. When determining an exit price, we must, whenever possible, rely upon observable market data.

The fair value measurement and disclosure exit price notion requires our valuation also to consider what a marketplace participant would pay to buy an asset or receive to assume a liability. Therefore, while we can consider pricing data from outside services, we ultimately determine whether the data or inputs used by these outside services are observable or unobservable.

In accordance with ASC 820-10, we have categorized our financial instruments, based on the priority of the inputs to the valuation technique, into a three-level fair value hierarchy. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure the financial instruments fall within different levels of the hierarchy, the categorization is based on the lowest level that is significant to the fair value measurement of the instrument.

Financial assets and liabilities recorded on the condensed consolidated balance sheets are categorized based on the inputs to the valuation techniques as described in Item 1, Note 3, Fair Value Measurements, Page 11.

Level 1 and Level 2 Valuation Techniques

Over 99 percent of the \$11.463 billion of securities in our investment portfolio measured at fair value are classified as Level 1 or Level 2. Financial assets that fall within Level 1 and Level 2 are priced according to observable data from identical or similar securities that have traded in the marketplace. Also within Level 2 are securities that are valued by outside services or brokers where we have evaluated the pricing methodology and determined that the inputs are observable.

Level 3 Valuation Techniques

Financial assets that fall within the Level 3 hierarchy are valued based upon unobservable market inputs, normally because they are not actively traded on a public market. Level 3 corporate fixed-maturity securities include certain

private placements, small issues, general corporate bonds and medium-term notes. Level 3 state, municipal and political subdivisions fixed-maturity securities include various thinly traded municipal bonds. Level 3 preferred equities include private and thinly traded preferred securities.

Pricing for each Level 3 security is based upon inputs that are market driven, including third-party reviews provided to the issuer or broker quotes. However, we placed in the Level 3 hierarchy those securities for which we were unable to obtain the pricing methodology or we could not consider the price provided as binding. Pricing for securities classified as Level 3 could not be corroborated by similar securities priced using observable inputs.

Management ultimately determined the pricing for each Level 3 security that we considered to be the best exit price valuation. As of September 30, 2011, total Level 3 assets were less than 1 percent of our investment portfolio measured at fair value. Broker quotes are obtained for thinly traded securities that subsequently fall within the Level 3 hierarchy. We have generally obtained two non-binding quotes from brokers and, after evaluating, our investment professionals typically selected the more conservative price for fair value.

Item 3. Quantitative and Qualitative Disclosures about Market Risk

Our greatest exposure to market risk is through our investment portfolio. Market risk is the potential for a decrease in securities' fair value resulting from broad yet uncontrollable forces such as: inflation, economic growth or recession, interest rates, world political conditions or other widespread unpredictable events. It is comprised of many individual risks that, when combined, create a macroeconomic impact.

Our view of potential risks and our sensitivity to such risks is discussed in our 2010 Annual Report on Form 10-K, Item 7a, Quantitative and Qualitative Disclosures about Market Risk, Page 93.

The fair value of our investment portfolio was \$11.463 billion at September 30, 2011, compared with \$11.424 billion at year-end 2010.

(In millions)	At September 30, 2011				At December 31, 2010			
	Cost or amortized cost	% to total	Fair value	% to total	Cost or amortized cost	% to total	Fair value	% to total
Taxable fixed maturities	\$5,453	52.9 %	\$ 5,939	51.8 %	\$5,139	50.5 %	\$ 5,533	48.4 %
Tax-exempt fixed maturities	2,726	26.4	2,915	25.4	2,749	27.0	2,850	25.0
Common equities	2,057	20.0	2,509	21.9	2,211	21.7	2,940	25.7
Preferred equities	75	0.7	100	0.9	75	0.8	101	0.9
Total	\$10,311	100.0 %	\$ 11,463	100.0 %	\$10,174	100.0 %	\$ 11,424	100.0 %

Our consolidated investment portfolio contains \$31 million of assets for which values are based on prices or valuation techniques that require management judgment (Level 3 assets). We generally obtain at least two outside valuations for these assets and generally use the more conservative calculation. These investments include private placements, small issues and various thinly traded securities.

At September 30, 2011, total Level 3 assets were less than 1 percent of investment portfolio assets measured at fair value. See Item 1, Note 3, Fair Value Measurements, Page 11, for additional discussion of our valuation techniques.

In addition to our investment portfolio, the total investments amount reported in our condensed consolidated balance sheets includes Other invested assets. Other invested assets included \$38 million of life policy loans and liens plus \$28 million of venture capital fund investments as of September 30, 2011.

Fixed-Maturity Investments

By maintaining a well-diversified fixed-maturity portfolio, we attempt to reduce overall risk. We invest new money in the bond market on a continuous basis, targeting what we believe to be optimal risk-adjusted after-tax yields. Risk, in this context, includes interest rate, call, reinvestment rate, credit and liquidity risk. We do not make a concerted effort to alter duration on a portfolio basis in response to anticipated movements in interest rates. By regularly investing in the bond market, we build a broad, diversified portfolio that we believe mitigates the impact of adverse economic factors.

In the first nine months of 2011, the increase in fair value of our bond portfolio was due to a multitude of factors. These contributors include purchases, lower treasury rates, tightening spreads on municipals and widening spreads on corporate bonds. At September 30, 2011, our bond portfolio was valued at 108.3 percent of its amortized cost, compared with 106.3 percent at December 31, 2010.

Credit ratings as of September 30, 2011, compared with December 31, 2010, for the fixed-maturity and short-term portfolios were:

(In millions)	At September 30, 2011		At December 31, 2010	
	Fair value	Percent to total	Fair value	Percent to total
Moody's Ratings and Standard & Poor's Ratings combined				
Aaa, Aa, A, AAA, AA, A	\$ 5,610	63.4 %	\$ 5,216	62.2 %
Baa, BBB	2,806	31.7	2,656	31.7
Ba, BB	189	2.1	241	2.9
B, B	34	0.4	42	0.5
Caa, CCC	6	0.1	19	0.2
Ca, CC	2	0.0	-	0.0
Daa, Da, D	-	0.0	1	0.0
Non-rated	207	2.3	208	2.5
Total	\$ 8,854	100.0 %	\$ 8,383	100.0 %

Attributes of the fixed-maturity portfolio include:

	At September 30, 2011		At December 31, 2010	
Weighted average yield-to-book value	5.3	%	5.5	%
Weighted average maturity	6.8	yrs	6.2	yrs
Effective duration	4.6	yrs	5.0	yrs

We discuss maturities of our fixed-maturity portfolio in our 2010 Annual Report on Form 10-K, Item 8, Note 2, Investments, Page 111, and Item 2, Investments Results of Operations, Page 43.

Taxable Fixed Maturities

Our taxable fixed-maturity portfolio, with a fair value of \$5.939 billion at September 30, 2011, included:

(In millions)	At September 30, 2011		At December 31, 2010	
Investment-grade corporate securities	\$	5,122	\$	4,695
States, municipalities and political subdivisions		324		293
Government sponsored enterprises		217		200
Below investment-grade corporate securities		197		268
Convertibles and bonds with warrants attached		69		69
United States government		7		5
Foreign government		3		3
Total	\$	5,939	\$	5,533

Our strategy typically is to buy and hold fixed-maturity investments to maturity, but we monitor credit profiles and fair value movements when determining holding periods for individual securities. With the exception of U.S. agency issues that include United States government and government sponsored enterprises, no individual issuer's securities accounted for more than 0.9 percent of the taxable fixed-maturity portfolio at September 30, 2011. Investment grade corporate bonds had an average rating of Baa1 by Moody's or BBB+ by Standard & Poor's and represented 86.3 percent of the taxable fixed-maturity portfolio's fair value at September 30, 2011, compared with 84.8 percent at year-end 2010.

The heaviest concentration in our investment-grade corporate bond portfolio, based on fair value at September 30, 2011, is the financial-related sectors – including banking, financial services and insurance – representing 29.9 percent, compared with 28.9 percent at year-end 2010. We believe our weighting in financial-related sectors is below the average for the corporate bond market as a whole.

Most of the \$324 million of securities issued by states, municipalities and political subdivisions included in our taxable fixed maturity portfolio at September 30, 2011, were Build America Bonds.

Tax-Exempt Fixed Maturities

At September 30, 2011, we had \$2.915 billion of tax-exempt fixed-maturity securities with an average rating of Aa2/AA by Moody's and Standard & Poor's. We traditionally have purchased municipal bonds focusing on general obligation and essential services issues, such as water, waste disposal and others. The portfolio is well diversified among approximately 1,000 municipal bond issuers. No single municipal issuer accounted for more than 0.7 percent of the tax-exempt fixed maturity portfolio at September 30, 2011. The following table shows our municipal bond holdings in our larger states:

(In millions)

Local issued

At September 30, 2011	State issued general obligation bonds	Local issued general obligation bonds	Special revenue bonds	Total	Percent of total	
Texas	\$ -	\$ 419	\$ 98	\$ 517	17.7	%

Interest Rate Sensitivity Analysis

Because of our strong surplus, long-term investment horizon and ability to hold most fixed-maturity investments until maturity, we believe the company is adequately positioned if interest rates were to rise. Although the fair values of our existing holdings may suffer, a higher rate environment would provide the opportunity to invest cash flow in higher yielding securities, while reducing the likelihood of untimely redemptions of currently callable securities. While higher interest rates would be expected to continue to increase the number of fixed-maturity holdings trading below 100 percent of amortized cost, we believe lower fixed-maturity security values due solely to interest rate changes would not signal a decline in credit quality. We continue to manage the portfolio with an eye toward both meeting current income needs and managing interest rate risk.

Our dynamic financial planning model uses analytical tools to assess market risks. As part of this model, the effective duration of the fixed-maturity portfolio is continually monitored by our investment department to evaluate the theoretical impact of interest rate movements.

The table below summarizes the effect of hypothetical changes in interest rates on the fair value of the fixed-maturity portfolio:

(In millions)	Interest Rate Shift in Basis Points (bps)				
	-200 bps	-100 bps	0 bps	100 bps	200 bps
At September 30, 2011	\$9,707	\$9,273	\$8,854	\$8,440	\$8,038
At December 31, 2010	\$9,260	\$8,814	\$8,383	\$7,964	\$7,568

The effective duration of the fixed-maturity portfolio as of September 30, 2011, was 4.6 years compared with 5.0 years at year-end 2010. The above table is a theoretical presentation showing that an instantaneous, parallel shift in the yield curve of 100 basis points could produce an approximately 4.7 percent change in the fair value of the fixed-maturity portfolio. Generally speaking, the higher a bond is rated, the more directly correlated movements in its fair value are to changes in the general level of interest rates, exclusive of call features. The fair values of average- to lower-rated corporate bonds are additionally influenced by the expansion or contraction of credit spreads.

In our dynamic financial planning model, the selected interest rate change of 100 to 200 basis points represents our view of a shift in rates that is quite possible over a one-year period. The rates modeled should not be considered a prediction of future events as interest rates may be much more volatile in the future. The analysis is not intended to provide a precise forecast of the effect of changes in rates on our results or financial condition, nor does it take into account any actions that we might take to reduce exposure to such risks.

Equity Investments

Our equity investments, with a fair value totaling \$2.609 billion at September 30, 2011, include \$2.509 billion of common stock securities of companies generally with strong indications of paying and growing their dividends. Other criteria we evaluate include increasing sales and earnings, proven management and a favorable outlook. We believe our equity investment style is an appropriate long-term strategy. While our long-term financial position would be affected by prolonged changes in the market valuation of our investments, we believe our strong surplus position and cash flow provide a cushion against short-term fluctuations in valuation. Continued payment of cash dividends by the issuers of the common equities we hold can provide a floor to their valuation. A \$100 million unrealized change in the value of the common stocks owned at period end would cause a change of \$65 million, or approximately 40 cents per share, in our shareholders' equity.

At September 30, 2011, our largest holding had a fair value of 4.9 percent of our publicly-traded common stock portfolio. PepsiCo Inc. (NYSE:PEP) was our largest single common stock investment, comprising 1.1 percent of the investment portfolio as of the end of the third quarter of 2011.

Unrealized Investment Gains and Losses

At September 30, 2011, unrealized investment gains before taxes for the consolidated investment portfolio totaled \$1.267 billion and unrealized investment losses amounted to \$115 million.

The unrealized investment gains at September 30, 2011, were due to a pretax net gain position in our fixed-maturity portfolio of \$675 million and a net gain position in our equity portfolio of \$477 million. The net gain position in our fixed-maturity portfolio has grown since year-end 2007 due largely to a declining interest rate environment in recent years. The net gain position for our current fixed-maturity holdings will naturally decline over time as individual securities mature. In addition, changes in interest rates can cause rapid, significant changes in fair values of fixed-maturity securities and the net gain position, as discussed on Pages 50 to 53.

The three primary contributors to our equity portfolio net gain position were ExxonMobil, Procter & Gamble and Chevron common stocks, which had a combined net gain position of \$251 million.

Unrealized Investment Losses

We expect the number of securities trading below amortized cost to fluctuate as interest rates rise or fall and credit spreads expand or contract due to prevailing economic conditions. Further, amortized costs for some securities are revised through impairment charges recognized in prior periods. At September 30, 2011, 182 of the 2,728 securities we owned were trading below amortized cost compared with 316 of the 2,671 securities we owned at year-end 2010. The 182 holdings trading below amortized cost at September 30, 2011, represented 10.2 percent of fair value of our investment portfolio and \$115 million in unrealized losses.

- 162 of these holdings were trading between 90 percent and 100 percent of amortized cost at September 30, 2011. 16 of these are equity securities that may be subject to OTTI charges taken through earnings should they not recover by the recovery dates we determined. The remaining 146 securities primarily consist of fixed-maturity securities whose current valuation is largely the result of interest rate factors. The fair value of these 162 securities was \$866 million, and they accounted for \$25 million in unrealized losses.
- 18 of these holdings were trading between 70 percent and 90 percent of amortized cost at September 30, 2011. 12 of these are equity securities that may be subject to OTTI should they not recover by the recovery dates we determined. Six are fixed-maturity securities that we believe will continue to pay interest and ultimately principal upon maturity. The issuers of these securities have strong cash flow to service their debt and meet their contractual obligation to make principal payments. The fair value of these 18 securities was \$253 million, and they accounted for \$63 million in unrealized losses.
- Two securities were trading below 70 percent of amortized cost at September 30, 2011. The two were equity securities that may be subject to OTTI charges taken through earnings should they not recover by the recovery dates we determined. The fair value of these two securities was \$48 million, and they accounted for \$27 million in unrealized losses.

The table below reviews fair values and unrealized losses by investment category and by the overall duration of the securities' continuous unrealized loss position.

(In millions)	Less than 12 months		12 months or more		Total

Equity securities:

Common equities	337	28	-	-	337	28
Preferred equities	5	-	23	1	28	1
Subtotal	342	28	23	1	365	29
Total	\$1,154	\$ 44	\$71	\$ 5	\$1,225	\$ 49

At September 30, 2011, 13 fixed-maturity securities with a total unrealized loss of \$3 million had been in an unrealized loss position for 12 months or more. Of that total, no fixed-maturity securities were trading under 70 percent of amortized cost; Three fixed-maturity securities with a fair value of \$14 million were trading from 70 percent to less than 90 percent of amortized cost and accounted for \$3 million in unrealized losses; and 10 fixed-maturity securities with a fair value of \$20 million were trading from 90 percent to less than 100 percent of amortized cost and accounted for less than \$1 million in unrealized losses.

At September 30, 2011, two equity securities with a total unrealized loss of \$1 million had been in an unrealized loss position for 12 months or more. Of that total, none were trading under 70 percent of cost; no equity securities were trading from 70 percent to less than 90 percent of cost; and two equity securities with a

fair value of \$18 million were trading from 90 percent to less than 100 percent of cost and accounted for \$1 million in unrealized losses.

As of September 30, 2011, applying our invested asset impairment policy, we determined that the \$115 million in total unrealized losses in the table above were not other-than-temporarily impaired.

During the third quarter of 2011, four securities were written down through impairment charges for a total of seven securities during the nine months ended September 30, 2011. OTTI resulted in pretax, non-cash charges of \$3 million and \$33 million for the three-month and nine-months ended September 30, 2011. During the same periods of 2010, we impaired securities resulting in \$1 million and \$36 million in OTTI charges.

During full-year 2010, we impaired 15 securities and recorded \$36 million in OTTI charges. At December 31, 2010, 17 fixed-maturity investments with a total unrealized loss of \$4 million had been in an unrealized loss position for 12 months or more. Of that total, no fixed-maturity investments were trading below 70 percent of amortized cost. Three equity investments with a total unrealized loss of \$1 million had been in an unrealized loss position for 12 months or more as of December 31, 2010. Of that total, no equity investments were trading below 70 percent of amortized cost.

The following table summarizes the investment portfolio by severity of decline:

(In millions)

	Number of issues	Cost or amortized cost	fair value	Gross unrealized gain/loss	Gross investment income
At September 30, 2011

Item 4.

Controls and Procedures

Evaluation of Disclosure Controls and Procedures – The company maintains disclosure controls and procedures (as that term is defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended (Exchange Act)).

Any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives. The company's management, with the participation of the company's chief executive officer and chief financial officer, has evaluated the effectiveness of the design and operation of the company's disclosure controls and procedures as of September 30, 2011. Based upon that evaluation, the company's chief executive officer and chief financial officer concluded that the design and operation of the company's disclosure controls and procedures provided reasonable assurance that the disclosure controls and procedures are effective to ensure:

- that information required to be disclosed in the company's reports under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms, and
- that such information is accumulated and communicated to the company's management, including its chief executive officer and chief financial officer, as appropriate, to allow timely decisions regarding required disclosures.

Changes in Internal Control over Financial Reporting – During the three months ended September 30, 2011, there were no changes in our internal controls over financial reporting that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Part II – Other Information

Item 1.

Legal Proceedings

Neither the company nor any of our subsidiaries is involved in any litigation believed to be material other than ordinary, routine litigation incidental to the nature of its business.

Item 1A.Risk Factors

Our risk factors have not changed materially since they were described in our 2010 Annual Report on Form 10-K filed February 25, 2011.

Item 2.

Unregistered Sales of Equity Securities and Use of Proceeds

We did not sell any of our shares that were not registered under the Securities Act during the first nine months of 2011.

The board of directors has authorized share repurchases since 1996. On October 24, 2007, the board of directors expanded the existing repurchase authorization to approximately 13 million shares. The board gives management discretion to purchase shares at reasonable prices in light of circumstances at the time of purchase, subject to SEC regulations. In the first nine months of 2011, we repurchased a total of 1,152,587 shares. We discuss the board authorization in our 2010 Annual Report on Form 10-K, Item 7, Liquidity and Capital Resources, Parent Company Liquidity, Page 79.

Period	Total number of shares purchased	Average price paid per share	Total number of shares purchased as part of publicly announced plans or programs	Maximum number of shares that may yet be purchased under the plans or programs
July 1-31, 2011	0	\$ 0.00	0	8,666,349
August 1-31, 2011	1,152,587	26.03	1,152,587	7,513,762
September 1-30, 2011	0	0.00	0	7,513,762
Totals	1,152,587	26.03	1,152,587	

Item 3. Defaults upon Senior Securities

We have not defaulted on any interest or principal payment, and no arrearage in the payment of dividends has occurred.

Item 4. (Removed and Reserved)

Item 5.

Other Information

On October 25, 2011, we entered into the Cincinnati Financial Corporation Executive Deferred Compensation Agreement (the “Deferred Compensation Agreement”) with Michael J. Sewell, our recently hired Chief Financial Officer. The Deferred Compensation Agreement provides Mr. Sewell or his beneficiaries with an annual benefit of up to \$54,000 in deferred compensation (depending on the type of benefit that Mr. Sewell selects) that is payable upon his attaining the age of 58. Under the terms of the Deferred Compensation Agreement, Mr. Sewell may name a beneficiary and select certain optional forms of benefit such as a joint and survivor benefit. This summary of the Deferred Compensation Agreement is qualified by reference to the entire agreement, which is attached as an exhibit to this Quarterly Report on Form 10-Q. Payouts for Mr. Sewell and his beneficiaries, depending on the benefit selected, are set forth on Exhibit A to the attached Deferred Compensation Agreement.

Item 6.

Exhibits

Exhibit No.

Exhibit Description

- | | |
|------|---|
| 3.1 | Amended and Restated Articles of Incorporation of Cincinnati Financial Corporation (incorporated by reference to the company’s 2010 Annual Report on Form 10-K dated February 25, 2011, Exhibit 3.1) |
