Transcript of TheStreet.com TV interview with Sal Gilbertie.

TheStreet.com: "Everybody around here doesn't want to say bubble, but they're thinking it a lot, especially with not just the fixed income side but with commodities – gold and other assorted things. Cotton – everyone is talking about how that's been up so dramatically. You sort of have a different take on that. You were talking about demand destruction. Can you just talk again a little bit about that?"

Mr. Gilbertie: "Sure. To me a bubble is caused when the price of something gets so high it causes demand destruction. So demand falls, then the price falls very sharply and quickly, and that's a bubble. And in commodities, particularly the foods and grains and energies where the supply demand analysis is easy to do, relatively easy to do; it's straightforward – supply/ demand. The commodity prices are rising or falling along with those factors.

Now in corn, it's risen substantially. But we have steadily rising demand throughout the world. It's so pervasive throughout the economy. I think only energy, in my opinion, is bigger than corn. Corn's in everything. It's in plastic. It's in food. It's in the meat you eat. It's in your fuel. It's everywhere. When you use paper, you're using corn because starch holds that paper together. It comes from corn.

So the demand for corn is rising dramatically, and the supply really needs to break a record every year. And we're going to have a record number of bushels produced, but not a record yield. And it literally isn't producing enough corn to meet the demand right now."

TheStreet.com: “So you think that if there’s any use of the term ‘bubble,’ it’s certainly premature in this case?”

Mr. Gilbertie: “I think it’s absolutely premature. You need such a high price that it destroys demand, and that’s simply not happening.”
