

FORD MOTOR CO
Form 10-K
February 11, 2016

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, DC 20549

FORM 10-K

(Mark One)

Annual report pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the fiscal year ended December 31, 2015

or

Transition report pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the transition period from _____ to _____

Commission file number 1-3950

Ford Motor Company
(Exact name of Registrant as specified in its charter)

Delaware 38-0549190
(State of incorporation) (I.R.S. Employer Identification No.)

One American Road, Dearborn, Michigan 48126
(Address of principal executive offices) (Zip Code)
313-322-3000
(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Name of each exchange on which registered*
Common Stock, par value \$.01 per share	New York Stock Exchange

* In addition, shares of Common Stock of Ford are listed on certain stock exchanges in Europe.

Securities registered pursuant to Section 12(g) of the Act: None.

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.
Yes No

Edgar Filing: FORD MOTOR CO - Form 10-K

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark if the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definitions of "large accelerated filer," "accelerated filer," and "smaller reporting company" in Rule 12b-2 of the Exchange Act. Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

As of June 30, 2015, Ford had outstanding 3,899,403,544 shares of Common Stock and 70,852,076 shares of Class B Stock. Based on the New York Stock Exchange Composite Transaction closing price of the Common Stock on that date (\$15.01 per share), the aggregate market value of such Common Stock was \$58,530,047,195. Although there is no quoted market for our Class B Stock, shares of Class B Stock may be converted at any time into an equal number of shares of Common Stock for the purpose of effecting the sale or other disposition of such shares of Common Stock. The shares of Common Stock and Class B Stock outstanding at June 30, 2015 included shares owned by persons who may be deemed to be "affiliates" of Ford. We do not believe, however, that any such person should be considered to be an affiliate. For information concerning ownership of outstanding Common Stock and Class B Stock, see the Proxy Statement for Ford's Annual Meeting of Stockholders currently scheduled to be held on May 12, 2016 (our "Proxy Statement"), which is incorporated by reference under various Items of this Report as indicated below.

As of February 4, 2016, Ford had outstanding 3,898,661,179 shares of Common Stock and 70,852,076 shares of Class B Stock. Based on the New York Stock Exchange Composite Transaction closing price of the Common Stock on that date (\$11.53 per share), the aggregate market value of such Common Stock was \$44,951,563,394.

PART I.

ITEM 1. Business.

Ford Motor Company was incorporated in Delaware in 1919. We acquired the business of a Michigan company, also known as Ford Motor Company, which had been incorporated in 1903 to produce and sell automobiles designed and engineered by Henry Ford. We are a global automotive and mobility company based in Dearborn, Michigan. With about 199,000 employees and 67 plants worldwide, our core business includes designing, manufacturing, marketing, financing, and servicing a full line of Ford cars, trucks, SUVs, and electrified vehicles, as well as Lincoln luxury vehicles. At the same time, we are aggressively pursuing emerging opportunities through Ford Smart Mobility, our plan to be a leader in connectivity, mobility, autonomous vehicles, the customer experience, and data and analytics. We provide financial services through Ford Motor Credit Company LLC (“Ford Credit”).

In addition to the information about Ford and our subsidiaries contained in this Annual Report on Form 10-K for the year ended December 31, 2015 (“2015 Form 10-K Report” or “Report”), extensive information about our Company can be found at <http://corporate.ford.com>, including information about our management team, our brands and products, and our corporate governance principles.

The corporate governance information on our website includes our Corporate Governance Principles, Code of Ethics for Senior Financial Personnel, Code of Ethics for the Board of Directors, Code of Corporate Conduct for all employees, and the Charters for each of the Committees of our Board of Directors. In addition, any amendments to our Code of Ethics or waivers granted to our directors and executive officers will be posted on our corporate website. All of these documents may be accessed by going to our corporate website, or may be obtained free of charge by writing to our Shareholder Relations Department, Ford Motor Company, One American Road, P.O. Box 1899, Dearborn, Michigan 48126-1899.

Our recent periodic reports filed with the Securities and Exchange Commission (“SEC”) pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934, as amended, are available free of charge at <http://shareholder.ford.com>. This includes recent Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, and Current Reports on Form 8-K, as well as any amendments to those Reports. Recent Section 16 filings made with the SEC by the Company or any of our executive officers or directors with respect to our Common Stock also are made available free of charge through our website. We post each of these documents on our website as soon as reasonably practicable after it is electronically filed with the SEC. Our reports filed with the SEC also may be found on the SEC’s website at www.sec.gov.

The foregoing information regarding our website and its content is for convenience only and not deemed to be incorporated by reference into this Report nor filed with the SEC.

Item 1. Business (Continued)

OVERVIEW

Segments. We review and present our business results in two sectors: Automotive and Financial Services. Within these sectors, our business is divided into reportable segments (referred to herein as “segments,” “business units,” or “regions”) based on the organizational structure that we use to evaluate performance and make decisions on resource allocation, as well as availability and materiality of separate financial results consistent with that structure.

The reportable segments within our Automotive and Financial Services sectors at December 31, 2015 were as described in the table below:

Business Sector	Reportable Segments	Description
Automotive:	North America	Primarily includes the sale of Ford and Lincoln vehicles, service parts, and accessories in North America (the United States, Canada, and Mexico), together with the associated costs to develop, manufacture, distribute, and service the vehicles, parts, and accessories.
	South America	Primarily includes the sale of Ford vehicles, service parts, and accessories in South America, together with the associated costs to develop, manufacture, distribute, and service the vehicles, parts, and accessories.
	Europe	Primarily includes the sale of Ford vehicles, components, service parts, and accessories in Europe, Turkey, and Russia, together with the associated costs to develop, manufacture, distribute, and service the vehicles, parts, and accessories.
	Middle East & Africa	Primarily includes the sale of Ford and Lincoln vehicles, service parts, and accessories in the Middle East and Africa, together with the associated costs to develop, manufacture, distribute, and service the vehicles, parts, and accessories.
	Asia Pacific	Primarily includes the sale of Ford and Lincoln vehicles, service parts, and accessories in the Asia Pacific region, together with the associated costs to develop, manufacture, distribute, and service the vehicles, parts, and accessories.
Financial Services:	Ford Credit	Primarily includes vehicle-related financing and leasing activities.

AUTOMOTIVE SECTOR

General

Our vehicle brands are Ford and Lincoln. In 2015, we sold approximately 6,635,000 vehicles at wholesale throughout the world. See “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations” (“Item 7”) for discussion of our calculation of wholesale unit volumes.

Substantially all of our vehicles, parts, and accessories are sold through distributors and dealers (collectively, “dealerships”), the substantial majority of which are independently owned. At December 31, 2015, the approximate number of dealerships worldwide distributing our vehicle brands was as follows:

Brand	Number of Dealerships
-------	-----------------------

	at December 31,
	2015
Ford	10,727
Ford-Lincoln (combined)	884
Lincoln	360
Total	11,971

We do not depend on any single customer or a few customers to the extent that the loss of such customers would have a material adverse effect on our business.

In addition to the products we sell to our dealerships for retail sale, we also sell vehicles to our dealerships for sale to fleet customers, including commercial fleet customers, daily rental car companies, and governments. We also sell parts and accessories, primarily to our dealerships (which in turn sell these products to retail customers) and to authorized parts distributors (which in turn primarily sell these products to retailers). We also offer extended service contracts.

The worldwide automotive industry is affected significantly by general economic conditions over which we have little control. Vehicles are durable goods, and consumers have latitude in determining whether and when to replace an existing vehicle. The decision whether to purchase a vehicle may be affected significantly by slowing economic growth,

Item 1. Business (Continued)

geopolitical events, and other factors (including the cost of purchasing and operating cars and trucks and the availability and cost of financing and fuel). As we have seen in the United States and Europe, in particular, the number of cars and trucks sold may vary substantially from year to year. Further, the automotive industry is a highly competitive business that has a wide and growing variety of product offerings from a growing number of manufacturers.

Our wholesale unit volumes vary with the level of total industry demand and our share of that industry demand. Our wholesale unit volumes also are influenced by the level of dealer inventory. Our share is influenced by how our products are perceived in comparison to those offered by other manufacturers based on many factors, including price, quality, styling, reliability, safety, fuel efficiency, functionality, and reputation. Our share also is affected by the timing and frequency of new model introductions. Our ability to satisfy changing consumer preferences with respect to type or size of vehicle, as well as design and performance characteristics, affects our sales and earnings significantly.

As with other manufacturers, the profitability of our business is affected by many factors, including:

• Wholesale unit volumes

• Margin of profit on each vehicle sold - which in turn is affected by many factors, such as:

Market factors - volume and mix of vehicles and options sold, and net pricing (reflecting, among other factors, incentive programs)

Costs of components and raw materials necessary for production of vehicles

Costs for customer warranty claims and additional service actions

Costs for safety, emissions, and fuel economy technology and equipment

• A high proportion of relatively fixed structural costs, so that small changes in wholesale unit volumes can significantly affect overall profitability

Our industry has a very competitive pricing environment, driven in part by industry excess capacity, which is concentrated in Europe and Asia but affects other markets because much of this capacity can be redirected to other markets. The decline in the value of the yen during the past four years also has contributed significantly to competitive pressures in many of our markets. For the past several decades, manufacturers typically have given price discounts and other marketing incentives to maintain market share and production levels. A discussion of our strategies to compete in this pricing environment is set forth in the “Overview” section in Item 7.

Competitive Position. The worldwide automotive industry consists of many producers, with no single dominant producer. Certain manufacturers, however, account for the major percentage of total sales within particular countries, especially their countries of origin. Key competitors with global presence include Fiat Chrysler Automobiles, General Motors Company, Honda Motor Company, Hyundai-Kia Automotive Group, PSA Peugeot Citroen, Renault-Nissan B.V., Suzuki Motor Corporation, Toyota Motor Corporation, and Volkswagen AG Group.

Seasonality. We generally record the sale of a vehicle (and recognize revenue) when it is produced and shipped or delivered to our customer (i.e., the dealership). See the “Overview” section in Item 7 for additional discussion of revenue recognition practices.

We manage our vehicle production schedule based on a number of factors, including retail sales (i.e., units sold by our dealerships to their customers at retail) and dealer stock levels (i.e., the number of units held in inventory by our dealerships for sale to their customers). Historically, we have experienced some seasonal fluctuation in the business, with production in many markets tending to be higher in the first half of the year to meet demand in the spring and summer (typically the strongest sales months of the year).

Raw Materials. We purchase a wide variety of raw materials from numerous suppliers around the world for use in production of our vehicles. These materials include base metals (e.g., steel, iron castings, and aluminum), precious metals (e.g., palladium), energy (e.g., natural gas), and plastics/resins (e.g., polypropylene). We believe we have adequate supplies or sources of availability of raw materials necessary to meet our needs. There always are risks and uncertainties with respect to the supply of raw materials, however, which could impact availability in sufficient quantities to meet our needs. See the “Overview” section of Item 7 for a discussion of commodity and energy price trends, and “Item 7A. Quantitative and Qualitative Disclosures about Market Risk” (“Item 7A”) for a discussion of commodity price risks.

Backlog Orders. We generally produce and ship our products on average within approximately 20 days after an order is deemed to become firm. Therefore, no significant amount of backlog orders accumulates during any period.

Item 1. Business (Continued)

Intellectual Property. We own or hold licenses to use numerous patents, copyrights, and trademarks on a global basis. Our policy is to protect our competitive position by, among other methods, filing U.S. and international patent applications to protect technology and improvements that we consider important to the development of our business. We have generated a large number of patents, and expect this portfolio to continue to grow as we actively pursue additional technological innovation. We have approximately 38,500 active patents and pending patent applications globally, with an average age for patents in our active patent portfolio of just over five years. In addition to this intellectual property, we also rely on our proprietary knowledge and ongoing technological innovation to develop and maintain our competitive position. Although we believe these patents, patent applications, and know-how, in the aggregate, are important to the conduct of our business, and we obtain licenses to use certain intellectual property owned by others, none is individually considered material to our business. We also own numerous trademarks and service marks that contribute to the identity and recognition of our Company and its products and services globally. Certain of these marks are integral to the conduct of our business, a loss of any of which could have a material adverse effect on our business.

Warranty Coverage, Field Service Actions, and Customer Satisfaction Actions. We provide warranties on vehicles we sell. Warranties are offered for specific periods of time and/or mileage, and vary depending upon the type of product and the geographic location of its sale. Pursuant to these warranties, we will repair, replace, or adjust all parts on a vehicle that are defective in factory-supplied materials or workmanship during the specified warranty period. In addition to the costs associated with this warranty coverage provided on our vehicles, we also incur costs as a result of field service actions (i.e., safety recalls, emission recalls, and other product campaigns), and for customer satisfaction actions.

For additional information regarding warranty and related costs, see “Critical Accounting Estimates” in Item 7 and Note 27 of the Notes to the Financial Statements.

Item 1. Business (Continued)

Industry Volume, Market Share, and Wholesales

Our industry volume, market share, and wholesale unit volume in each region and in certain key markets within each region during the past three years were as follows:

	Industry Volume (a) (in millions of units)			Market Share (b) (as a percentage)			Wholesales (c) (in thousands of units)		
	2015	2014	2013	2015	2014	2013	2015	2014	2013
United States	17.8	16.8	15.9	14.7	% 14.7	% 15.7	2,677	2,457	2,608
Canada	1.9	1.9	1.8	14.4	15.5	15.9	285	288	283
Mexico	1.4	1.2	1.1	6.7	6.9	8.0	93	77	91
North America	21.5	20.2	19.1	14.0	14.2	15.2	3,073	2,842	3,006
Brazil	2.6	3.5	3.8	10.4	% 9.4	% 9.4	250	320	364
Argentina	0.6	0.7	0.9	14.8	14.1	12.6	94	94	118
South America	4.2	5.3	5.9	9.6	8.9	8.9	381	463	538
Britain	3.1	2.8	2.6	14.3	% 14.4	% 14.6	447	425	379
Germany	3.5	3.4	3.3	7.3	7.1	6.9	261	237	227
Russia	1.6	2.5	2.8	2.4	2.6	3.8	38	57	105
Turkey	1.0	0.8	0.9	12.6	11.7	12.9	128	91	114
Europe (d)	19.2	18.6	18.3	7.7	7.2	7.3	1,530	1,387	1,317
Middle East & Africa	4.3	4.3	3.9	4.5	% 4.6	% 5.0	187	192	199
China (e)	25.1	24.0	22.2	4.5	% 4.5	% 4.1	1,160	1,116	936
Australia	1.2	1.1	1.1	6.1	7.2	7.7	71	80	85
India	3.4	3.2	3.3	2.1	2.4	2.5	78	77	80
ASEAN (f)	3.0	3.2	3.5	3.3	3.1	2.7	94	94	99
Asia Pacific (g)	40.5	39.7	37.8	3.5	3.5	3.3	1,464	1,439	1,270
Global	89.5	88.1	85.0	7.3	% 7.1	% 7.3	N/A	N/A	N/A
Total Company	N/A	N/A	N/A	N/A	N/A	N/A	6,635	6,323	6,330

(a) Industry volume is an internal estimate based on publicly-available data collected from various government, private, and public sources around the globe and is based, in part, on estimated vehicle registrations.

Market share represents reported retail sales of our brands as a percent of total industry volume in the relevant market or region. Market share is based, in part, on estimated vehicle registrations; includes medium and heavy trucks.

Wholesale unit volume includes sales of medium and heavy trucks. Wholesale unit volume includes all Ford and Lincoln badged units (whether produced by Ford or by an unconsolidated affiliate) that are sold to dealerships, units manufactured by Ford that are sold to other manufacturers, units distributed for other manufacturers, and local brand units produced by our unconsolidated Chinese joint venture Jiangling Motors Corporation, Ltd. ("JMC") that are sold to dealerships. Vehicles sold to daily rental car companies that are subject to a guaranteed repurchase option (i.e., rental repurchase), as well as other sales of finished vehicles for which the recognition of revenue is deferred (e.g., consignments), also are included in wholesale unit volume. Revenue from certain vehicles in wholesale unit volume (specifically, Ford badged vehicles produced and distributed by our unconsolidated affiliates, as well as JMC brand vehicles) are not included in our revenue.

(d)

Amounts shown are based on total Europe. We previously reported these amounts on a Europe 20 basis, which consisted of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Netherlands, Norway, Poland, Portugal, Romania, Spain, Sweden, Switzerland, and the United Kingdom. Europe 20 industry volume was 16.0 million, 14.6 million, and 13.8 million in 2015, 2014, and 2013, respectively. Europe 20 market share was 8.0%, 7.9%, and 7.8% in 2015, 2014, and 2013, respectively.

- China industry volume and market share for years shown above are based on estimated wholesales. In 2016, we
- (e) will begin using estimated vehicle registrations as a basis for calculating industry volume and market share. China industry volume, based on estimated vehicle registrations, was 23.5 million units in 2015.
 - (f) ASEAN includes Indonesia, Philippines, Thailand, Vietnam, and Malaysia.
 - (g) Asia Pacific market share includes Ford brand and JMC brand vehicles produced and sold by our unconsolidated affiliates.

Item 1. Business (Continued)

FINANCIAL SERVICES SECTOR

Ford Motor Credit Company LLC

Our wholly-owned subsidiary Ford Credit offers a wide variety of automotive financing products to and through automotive dealers throughout the world. The predominant share of Ford Credit's business consists of financing our vehicles and supporting our dealers. Ford Credit earns its revenue primarily from payments made under retail installment sale and lease contracts that it originates and purchases; interest rate supplements and other support payments from us and our subsidiaries; and payments made under dealer financing programs.

As a result of these financing activities, Ford Credit has a large portfolio of finance receivables and operating leases which it classifies into two portfolios— "consumer" and "non-consumer." Finance receivables and operating leases in the consumer portfolio include products offered to individuals and businesses that finance the acquisition of our vehicles from dealers for personal and commercial use. Retail financing includes retail installment sale contracts for new and used vehicles and direct financing leases for new vehicles to retail and commercial customers including leasing companies, government entities, daily rental companies, and fleet customers. Finance receivables in the non-consumer portfolio include products offered to automotive dealers. Ford Credit makes wholesale loans to dealers to finance the purchase of vehicle inventory (i.e., floorplan financing), as well as loans to dealers to finance working capital and improvements to dealership facilities, finance the purchase of dealership real estate, and finance other dealer vehicle programs. Ford Credit also purchases receivables generated by us and our subsidiaries, primarily related to the sale of parts and accessories to dealers, receivables from Ford-related loans, and certain used vehicles from daily rental fleet companies.

Ford Credit does business in the United States and Canada through business centers. Outside of the United States, Europe is Ford Credit's largest operation. Ford Credit's European operations are managed through its United Kingdom-based subsidiary, FCE Bank plc ("FCE"). Within Europe, FCE's largest markets are the United Kingdom and Germany, representing 67% of FCE's finance receivables and operating leases.

The following table shows Ford Credit's financing shares of new Ford and Lincoln vehicles sold in the United States and new Ford vehicles sold in Europe, as well as its wholesale financing shares of new Ford and Lincoln vehicles acquired by dealers in the United States (excluding fleet) and new Ford vehicles acquired by dealers in Europe:

	Years Ended December 31,			
	2015	2014	2013	
United States - Financing Share				
Retail installment and lease	47	% 45	% 40	%
Wholesale	76	77	77	
Europe - Financing Share				
Retail installment and lease	37	% 36	% 34	%
Wholesale	98	98	98	

See Item 7 and Notes 5, 6, and 7 of the Notes to the Financial Statements for a detailed discussion of Ford Credit's receivables, credit losses, allowance for credit losses, loss-to-receivables ratios, funding sources, and funding strategies. See Item 7A for discussion of how Ford Credit manages its financial market risks.

We routinely sponsor special retail and lease incentives to dealers' customers who choose to finance or lease our vehicles from Ford Credit. In order to compensate Ford Credit for the lower interest or lease payments offered to the retail customer, we pay the value of the incentive directly to Ford Credit when it originates the retail finance or lease

contract. These programs increase Ford Credit's financing volume and share. See Note 2 of the Notes to the Financial Statements for information about our accounting for these programs.

On April 30, 2015, we entered into an Amended and Restated Relationship Agreement with Ford Credit, pursuant to which, if Ford Credit's managed leverage for a calendar quarter were to be higher than 11.5:1 (as reported in its most recent periodic report), Ford Credit could require us to make or cause to be made a capital contribution to it in an amount sufficient to have caused such managed leverage to have been 11.5:1. No capital contributions have been made pursuant to this agreement. The agreement also limits to \$3 billion the amount Ford Credit may borrow under our Third Amended and Restated Credit Agreement dated as of April 30, 2015. In a separate agreement with FCE, Ford Credit also has agreed to maintain FCE's net worth in excess of \$500 million; no payments have been made pursuant to that agreement.

Item 1. Business (Continued)

GOVERNMENTAL STANDARDS

Many governmental standards and regulations relating to safety, fuel economy, emissions control, noise control, vehicle recycling, substances of concern, vehicle damage, and theft prevention are applicable to new motor vehicles, engines, and equipment manufactured for sale in the United States, Europe, and elsewhere. In addition, manufacturing and other automotive assembly facilities in the United States, Europe, and elsewhere are subject to stringent standards regulating air emissions, water discharges, and the handling and disposal of hazardous substances. The most significant of the standards and regulations affecting us are discussed below:

Vehicle Emissions Control

U.S. Requirements – Federal Emission Standards. The federal Clean Air Act imposes stringent limits on the amount of regulated pollutants that lawfully may be emitted by new vehicles and engines produced for sale in the United States. In 2014, the U.S. Environmental Protection Agency (“EPA”) finalized new “Tier 3” regulations that phase in increasingly stringent motor vehicle emission standards beginning with the 2017 model year; compliance with these standards could be challenging. Compliance with automobile emission standards depends in part on the widespread availability of high-quality and consistent automotive fuels that the vehicles were designed to use. Fuel variables that can affect vehicle emissions include ethanol content, octane ratings, and the use of metallic-based fuel additives, among other things. There are various ongoing regulatory and judicial proceedings related to fuel quality at the national and state level, and the outcome of these proceedings could affect vehicle manufacturers’ warranty costs as well as their ability to comply with vehicle emission standards.

U.S. Requirements – California and Other State Emission Standards. Pursuant to the Clean Air Act, California may establish its own unique vehicle emission standards; the California standards can also be adopted by other states. The California Air Resources Board (“CARB”) has adopted “LEV III” standards, which took effect with the 2015 model year and impose increasingly stringent tailpipe and evaporative emissions requirements for light and medium duty vehicles. Thirteen states, primarily located in the Northeast and Northwest, have adopted the LEV III standards.

The California vehicle emissions program also includes requirements for manufacturers to produce and deliver for sale zero-emission vehicles (“ZEVs”). The current ZEV regulations mandate substantial annual increases in the production and sale of battery-electric, fuel cell, and plug-in hybrid vehicles, particularly for the 2018–2025 model years. By the 2025 model year, approximately 15% of a manufacturer’s total California sales volume will need to be made up of such vehicles. Compliance with ZEV rules could have a substantial adverse effect on our sales volumes and profits. We are concerned that the market and infrastructure in California may not support the large volume of advanced-technology vehicles that manufacturers will be required to produce, especially if gasoline prices remain relatively low. We also are concerned about enforcement of the ZEV mandate in other states that have adopted California’s ZEV program, where the existence of a market for such vehicles is even less certain. CARB conducts periodic reviews of its upcoming ZEV requirements, taking into account factors such as technology developments and market acceptance. Ford and the industry will be active participants in such reviews, with the goal of ensuring that ZEV requirements are feasible and not excessively burdensome.

European Requirements. European Union (“EU”) directives and related legislation limit the amount of regulated pollutants that may be emitted by new motor vehicles and engines sold in the EU. Stringent new Stage 6 emission standards took effect for vehicle registrations starting in September 2014, with a second phase beginning in September 2017. These standards will drive the need for additional diesel exhaust after-treatment, which will add cost and potentially impact the diesel CO₂ advantage. The European Commission has also proposed new Real Driving Emission (RDE) rules, which will require manufacturers to conduct on-road emission tests using portable emission analyzers. These on-road emission tests will complement the laboratory-based tests. During the initial phase, which

started in January 2016, the RDE tests are used for monitoring purposes. Beginning in September 2017, manufacturers will have to reduce the divergence between the regulatory limit that is tested in laboratory conditions and the values of RDE tests (“conformity factors”). The additional costs associated with conducting the RDE tests and complying with the conformity factors are expected to be significant.

Other National Requirements. Many countries, in an effort to address air quality concerns, are adopting previous versions of European or United Nations Economic Commission for Europe (“UN-ECE”) mobile source emission regulations. Some countries have adopted more advanced regulations based on the most recent version of European or U.S. regulations; for example, China adopted emission regulations for large cities based on European Stage V emission standards. Korea and Taiwan have adopted very stringent U.S.-based standards for gasoline vehicles and European-based standards for diesel vehicles. Although these countries have adopted regulations based on UN-ECE or U.S. standards, there may be some unique testing provisions that require emission-control systems to be redesigned for

7

Item 1. Business (Continued)

these markets. Canadian criteria emissions regulations are aligned with U.S. Tier 2 requirements. In July 2015, the Canadian federal government amended the On-Road Vehicle and Engine Emission Regulations and the Sulphur in Gasoline Regulations to align Canadian emission standards with the U.S. Tier 3 regulations discussed above.

Not all countries have adopted appropriate fuel quality standards to accompany the stringent emission standards adopted. This could lead to compliance problems, particularly if on-board diagnostic or in-use surveillance requirements are implemented.

Brazil and Chile have introduced stringent emission and on-board diagnostic standards based on the European Stage 5 standards for light duty vehicles and Stage V standards for heavy duty vehicles. In Brazil, more stringent on-board diagnostic standards for diesel light duty vehicles will be introduced in 2017. Argentina is phasing in European Stage 5 standards for all new light duty vehicle registrations by 2017 and European Stage V standards for heavy duty vehicles by 2018.

Global Developments. In September 2015, the EPA and CARB announced that they were investigating a major competitor in connection with its alleged use of “defeat devices” in hundreds of thousands of light-duty diesel vehicles. The announcement triggered similar investigations of the competitor by regulators in other countries. Defeat devices are elements of design (typically embedded in software) that improperly cause the emission control system to function less effectively during normal on-road driving than during an official laboratory emissions test, without justification. They are prohibited by law in many jurisdictions, including the United States and Europe. We do not use defeat devices in our vehicles.

The investigations by the EPA and CARB of our competitor have led to increased scrutiny of automakers’ emission testing by regulators around the world. The EPA began carrying out additional non-standard tests as part of its vehicle certification program, following an announcement in September 2015. The EU accelerated efforts to finalize its RDE testing program as described above. Several European countries, including France and Germany, are conducting non-standard emission tests and meeting with manufacturers to discuss the results.

Vehicle Fuel Economy and Greenhouse Gas Standards

U.S. Requirements – Light Duty Vehicles. Federal law requires that light duty vehicles meet minimum corporate average fuel economy (“CAFE”) standards set by the National Highway Traffic Safety Administration (“NHTSA”). Manufacturers are subject to substantial civil penalties if they fail to meet the CAFE standard in any model year, after taking into account all available credits for the preceding three model years and expected credits for the five succeeding model years. The law requires NHTSA to promulgate and enforce separate CAFE standards applicable to each manufacturer’s fleet of domestic passenger cars, imported passenger cars, and light duty trucks.

The EPA also regulates vehicle greenhouse gas (“GHG”) emissions under the Clean Air Act. Because the vast majority of GHGs emitted by a vehicle are the result of fuel combustion, GHG emission standards effectively are fuel economy standards. Thus, it is necessary for NHTSA and EPA to coordinate with each other on their fuel economy and GHG standards, respectively, to avoid potential inconsistencies.

In 2010, EPA and NHTSA jointly promulgated regulations establishing the “One National Program” of CAFE and GHG regulations for light duty vehicles for the 2012-2016 model years. In 2012, EPA and NHTSA jointly promulgated regulations extending the One National Program framework through the 2025 model year. These rules require manufacturers to achieve, across the industry, a light duty fleet average fuel economy of approximately 35.5 mpg by the 2016 model year, 45 mpg by the 2021 model year, and 54.5 mpg by the 2025 model year. Each manufacturer’s specific task depends on the mix of vehicles it sells. The rules include the opportunity for manufacturers to earn

credits for technologies that achieve real-world CO₂ reductions, and fuel economy improvements that are not captured by EPA fuel economy test procedures. Manufacturers also can earn credits for GHG reductions not specifically tied to fuel economy, such as improvements in air conditioning systems.

The One National Program standards become increasingly stringent over time, and they will be difficult to meet if fuel prices remain relatively low and market conditions do not drive consumers to purchase electric vehicles and other highly fuel-efficient vehicles in large numbers. The rules provide for a midterm evaluation process under which, by 2018, EPA and NHTSA will re-evaluate their standards for model years 2022–2025 in order to ensure that those standards are feasible and optimal in light of intervening events. We are particularly concerned about the commercial feasibility of meeting the 2022–2025 model year GHG and CAFE standards, and therefore the midterm evaluation process is very important to Ford and the auto industry. Ford’s ability to comply with the 2022–2025 model year standards remains unclear because of the many unknowns regarding technology development, market conditions, and other factors so far

Item 1. Business (Continued)

into the future. We intend to be an active participant in the midterm evaluation process for these standards. Our concern about the feasibility of the fuel economy and GHG standards also extends to some of the pre-2022 model year standards, which are not covered by the midterm evaluation.

If the agencies seek to impose and enforce fuel economy and GHG standards that are misaligned with market conditions, we likely would be forced to take various actions that could have substantial adverse effects on our sales volume and profits. Such actions likely would include restricting offerings of selected engines and popular options; increasing market support programs for our most fuel-efficient cars and light trucks; and ultimately curtailing the production and sale of certain vehicles such as high-performance cars, utilities, and/or full-size light trucks, in order to maintain compliance.

California has asserted the right to regulate motor vehicle GHG emissions, and other states have asserted the right to adopt the California standards. With the adoption of the federal One National Program standards discussed above, California and the other states have agreed that compliance with the federal program would satisfy compliance with any purported state GHG requirements for the 2012–2025 model years. This avoids a patchwork of potentially conflicting federal and state GHG standards. Should California and other states ever renew their efforts to enforce state-specific motor vehicle GHG rules, this would impose significant costs on automotive manufacturers.

U.S. Requirements – Heavy Duty Vehicles. EPA and NHTSA have jointly promulgated GHG and fuel economy standards on heavy duty vehicles (generally, vehicles over 8,500 pounds gross vehicle weight rating). In our case, the standards primarily affect our heavy duty pickup trucks and vans, plus vocational vehicles such as shuttle buses and delivery trucks. EPA and NHTSA are expected to finalize new rules in 2016 setting GHG and fuel economy standards for these vehicles, covering model years 2019–2027. As the heavy-duty standards increase in stringency, it may become more difficult to comply while continuing to offer a full lineup of heavy duty trucks.

European Requirements. In December 2008, the EU approved regulation of passenger car CO₂ emissions beginning in 2012 that limits the industry fleet average to a maximum of 130 grams per kilometer (“g/km”), using a sliding scale based on vehicle weight. This regulation provides different targets for each manufacturer based on the respective average vehicle weight for its fleet of vehicles. Limited credits are available for CO₂ off-cycle actions (“eco-innovations”), certain alternative fuels, and vehicles with CO₂ emissions below 50 g/km. A penalty system will apply for manufacturers failing to meet targets, with fees ranging from €5 to €95 per vehicle per g/km shortfall in the years 2012–2018, and €95 per g/km shortfall beginning in 2019. Pooling agreements between different manufacturers are possible, although it is not clear that these will be of much practical benefit under the regulations. Starting in 2020, an industry target of 95 g/km has been set. Other non-EU European countries are likely to follow with similar regulations. For example, Switzerland has introduced similar rules, which began phasing-in starting in July 2012 with the same targets (which likely also will include a 2020 target of 95 g/km), although the industry average emission target is significantly higher. We face the risk of advance premium payment requirements if, for example, unexpected market fluctuation within a quarter negatively impact our average fleet performance.

In separate legislation, “complementary measures” have been mandated, including requirements related to fuel economy indicators, and more-efficient low-CO₂ mobile air conditioning systems. The EU Commission, Council and Parliament have approved a target for commercial light duty vehicles to be at an industry average of 175 g/km (with phase-in from 2014–2017), and 147 g/km in 2020; it is likely that other European countries, like Switzerland, will implement similar rules but under even more difficult conditions. This regulation also provides different targets for each manufacturer based on its respective average vehicle weight in its fleet of vehicles. The final mass and CO₂ requirements for “multi-stage vehicles” (e.g., our Transit chassis cabs) are fully allocated to the base manufacturer (e.g., Ford) so that the base manufacturer is fully responsible for the CO₂ performance of the final up-fitted vehicles. The EU proposal also includes a penalty system, “super-credits” for vehicles below 50 g/km, and limited credits for CO₂

off-cycle eco-innovations, pooling, etc., similar to the passenger car CO₂ regulation.

The United Nations has a project underway to develop a new technical regulation for passenger car emissions and CO₂. This new world light duty test procedure (“WLTP”) is focused primarily on better aligning laboratory CO₂ and fuel consumption figures with customer-reported figures. The introduction of WLTP in Europe is likely to require updates to CO₂ labeling as early as 2018 and could increase certain consumer label values. Costs associated with new or incremental testing for WLTP could be significant. The European Commission continues to apply political pressure for mandatory WLTP testing for regulated emissions and CO₂ starting in September 2017. The European Commission has assured equivalent stringency to the existing fleet average rules for each automobile manufacturer if the 2020 fleet average targets are required to be measured on WLTP instead of under the current European New European Driving Cycle (“NEDC”) requirements.

Item 1. Business (Continued)

Some European countries have implemented or are considering other initiatives for reducing CO₂ vehicle emissions, including fiscal measures and CO₂ labeling. For example, the United Kingdom, France, Germany, Spain, Portugal, and the Netherlands, among others, have introduced taxation based on CO₂ emissions. The EU CO₂ requirements are likely to trigger further measures. To limit GHG emissions, the EU directive on mobile air conditioning currently requires the replacement of the current refrigerant with a lower “global warming potential” refrigerant for new vehicle types, and for all newly registered vehicles starting in January 2017. A refrigerant change adds considerable costs along the whole manufacturing chain.

Other National Requirements. The Canadian federal government has regulated vehicle GHG emissions under the Canadian Environmental Protection Act, beginning with the 2011 model year. The standards track the U.S. EPA GHG regulations for the 2012–2016 model years. In October 2014, the Canadian federal government published the final changes to the regulation for light duty vehicles, which maintain alignment with U.S. EPA vehicle GHG standards for the 2017–2025 model years. The final regulation for 2014–2018 heavy duty vehicles was published in February 2013. In October 2014, the Canadian federal government published the Notice of Intent to regulate heavy duty vehicles and engines for model year 2019 and beyond, which tracks U.S. EPA standards.

Mexico adopted fuel economy/CO₂ standards, based on the U.S. One National Program framework, that took effect in 2014.

Many Asia Pacific countries (such as Australia, China, India, South Korea, Taiwan, and Vietnam) are developing or enforcing fuel efficiency or labeling targets. For example, South Korea has set fuel efficiency targets for 2020, with incentives for early adoption. China published standards for Stage IV fuel efficiency targets for 2016–2020. The fuel efficiency targets will impact the cost of vehicle technology in the future.

In South America, Brazil introduced a voluntary vehicle energy-efficiency labeling program, indicating fuel consumption rates for all light-duty vehicles. Brazil has required inclusion of emission classification on fuel economy labels since January 2016. Brazil also published a new automotive regime establishing a minimum absolute CAFE value as a function of Fleet Corporate Average Mass for 2017 light duty vehicles with a spark ignition engine in order to qualify for industrialized products tax reduction. Additional tax reductions are available if further fuel efficiency improvements are achieved. A severe penalty system will apply to qualified manufacturers failing to meet fuel efficiency requirements for the 2013–2017 sales period. Brazil reduced import tax on electric and hybrid cars. The tax rate, which was 35%, will vary from zero to 7%, depending on a vehicle’s energy efficiency. Chile introduced a tax based on urban fuel consumption and NOx emission for light and medium vehicles beginning in late 2014. In general, fuel efficiency targets may impact the cost of technology of our models in the future.

In the Middle East, the Kingdom of Saudi Arabia introduced new light duty vehicle fuel economy standards, which are patterned after the U.S. CAFE standard structure, with fuel economy targets following the design of the U.S. 2012–2016 fuel economy standards. The standards became effective on January 1, 2016 and will be fully phased in by the end of 2017.

Vehicle Safety

U.S. Requirements. The National Traffic and Motor Vehicle Safety Act of 1966 (the “Safety Act”) regulates vehicles and vehicle equipment in two primary ways. First, the Safety Act prohibits the sale in the United States of any new vehicle or equipment that does not conform to applicable vehicle safety standards established by NHTSA. Meeting or exceeding many safety standards is costly, in part because the standards tend to conflict with the need to reduce vehicle weight in order to meet emission and fuel economy standards. Second, the Safety Act requires that defects

related to motor vehicle safety be remedied through safety recall campaigns. A manufacturer is obligated to recall vehicles if it determines the vehicles do not comply with a safety standard. Should we or NHTSA determine that either a safety defect or noncompliance issue exists with respect to any of our vehicles, the cost of such recall campaigns could be substantial.

Other National Requirements. The EU and many countries have established vehicle safety standards and regulations, and are likely to adopt additional or more stringent requirements in the future. The European General Safety Regulation introduced United Nations Economic Commission for Europe (“UN-ECE”) regulations, which will be required for the European Type Approval process. EU regulators also are focusing on active safety features such as lane departure warning systems, electronic stability control, and automatic brake assist. Globally, governments generally have been adopting UN-ECE based regulations with minor variations to address local concerns. Any difference between North American and UN-ECE based regulations can add complexity and costs to the development of global platform vehicles, and we continue to support efforts to harmonize regulations to reduce vehicle design complexity while providing a common level of safety performance; several recently launched bilateral negotiations on free trade can potentially contribute to this goal. New safety and recall requirements in China, India, and Gulf Cooperation Council countries also

Item 1. Business (Continued)

may add substantial costs and complexity to our global recall practice. In South America, additional safety requirements are being introduced or proposed in Argentina, Brazil, Chile, Colombia, Ecuador, and Uruguay, influenced by The New Car Assessment Programme for Latin America and the Caribbean (“Latin NCAP”), which may be a driver for similar actions in other countries. In Canada, regulatory requirements are currently aligned with U.S. regulations. However, recent amendments to the Canadian Motor Vehicle Safety Act have introduced broad powers to the Minister of Transport to order manufacturers to submit a notice of defect or non-compliance when the Minister considers it would be in the interest of safety.

EMPLOYMENT DATA

The approximate number of individuals employed by us and entities that we consolidated as of December 31, 2015 and 2014 was as follows (in thousands):

	2015	2014
Automotive		
North America	96	90
South America	15	16
Europe (a)	53	47
Middle East & Africa	3	3
Asia Pacific	25	25
Financial Services		
Ford Credit	7	6
Total	199	187

(a) 2015 includes employees of Ford Sollers, our joint-venture in Russia that was consolidated effective March 31, 2015.

The year-over-year increase in employment primarily reflects hiring in North America to support product-led growth initiatives and increased vehicle production.

Substantially all of the hourly employees in our Automotive operations are represented by unions and covered by collective bargaining agreements. In the United States, approximately 99% of these unionized hourly employees in our Automotive sector are represented by the International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (“UAW” or “United Auto Workers”). Approximately 1.5% of our U.S. salaried employees are represented by unions. Many non-management salaried employees at our operations outside of the United States also are represented by unions.

In 2015, we entered into a four-year collective bargaining agreement with the UAW covering approximately 53,000 employees in the United States. The terms of the agreement provide us with opportunities to improve our productivity and put us on common footing with our domestic competitors regarding labor cost structure. Overall, including the ratification and lump sum bonuses, our U.S. labor costs are expected to increase by less than 1.5% a year during the term of the agreement.

In 2015, we also entered into collective bargaining agreements (covering wages, benefits and/or other employment provisions) with unions in Argentina, Brazil, France, Germany, India, Mexico, New Zealand, Romania, Taiwan, Thailand and the United Kingdom.

In 2016, we will negotiate collective bargaining agreements (covering wages, benefits and/or other employment provisions) with unions in Argentina, Brazil, Canada, France, Germany, Italy, Mexico, Romania, Russia, South

Africa, Taiwan and Thailand.

ENGINEERING, RESEARCH, AND DEVELOPMENT

We engage in engineering, research, and development primarily to improve the performance (including fuel efficiency), safety, and customer satisfaction of our products, and to develop new products. Engineering, research, and development expenses for 2015, 2014, and 2013 were \$6.7 billion, \$6.7 billion, and \$6.2 billion, respectively.

11

ITEM 1A. Risk Factors.

We have listed below (not necessarily in order of importance or probability of occurrence) the most significant risk factors applicable to us:

Decline in industry sales volume, particularly in the United States, Europe, or China, due to financial crisis, recession, geopolitical events, or other factors. Because we, like other manufacturers, have a high proportion of relatively fixed structural costs, relatively small changes in industry sales volume can have a substantial effect on our cash flow and profitability. If industry vehicle sales were to decline to levels significantly below our planning assumption, particularly in the United States, Europe, or China, due to financial crisis, recession, geopolitical events, or other factors, such as occurred during 2008 and 2009, our financial condition and results of operations would be substantially adversely affected. For discussion of economic trends, see the “Overview” section of Item 7.

Decline in Ford’s market share or failure to achieve growth. To maintain competitive economies of scale and grow our global market share, we must grow our market share in fast-growing newly developed and emerging markets, particularly in our Asia Pacific region and our Middle East & Africa region, as well as maintain or grow market share in mature markets. Our market share in certain growing markets, such as China, is lower than it is in our mature markets. A significant decline in our market share in mature markets or failure to achieve growth in newly developing or emerging markets, whether due to capacity constraints, competitive pressures, protectionist trade policies, or other factors, could have a substantial adverse effect on our financial condition and results of operations.

Lower-than-anticipated market acceptance of Ford’s new or existing products or services. Although we conduct extensive market research before launching new or refreshed vehicles and introducing new services, many factors both within and outside our control affect the success of new or existing products and services in the marketplace. Offering vehicles and services that customers want and value can mitigate the risks of increasing price competition and declining demand, but products and services that are perceived to be less desirable (whether in terms of price, quality, styling, safety, overall value, fuel efficiency, or other attributes) can exacerbate these risks. The success of Ford Smart Mobility, our plan for connectivity, mobility, autonomous vehicles, the customer experience, and data and analytics, likewise depends on many factors, including the amount of capital we invest, advancements in technology, regulatory changes, and other factors that are difficult to predict that may significantly affect the future of mobility. With increased consumer interconnectedness through the internet, social media, and other media, mere allegations relating to quality, safety, fuel efficiency, corporate social responsibility, or other key attributes can negatively impact our reputation or market acceptance of our products or services, even where such allegations prove to be inaccurate or unfounded.

Market shift away from sales of larger, more profitable vehicles beyond Ford’s current planning assumption, particularly in the United States. A shift in consumer preferences away from larger, more profitable vehicles at levels beyond our current planning assumption could result in an immediate and substantial adverse impact on our financial condition and results of operations. Although we have a balanced portfolio of small, medium, and large cars, utilities, and trucks with competitive fuel efficiency, a shift in consumer preferences away from sales of larger, more profitable vehicles at levels greater than our current planning assumption—whether because of spiking fuel prices, a decline in the construction industry, government actions or incentives, or other reasons—still could have a substantial adverse effect on our financial condition and results of operations.

An increase in or continued volatility of fuel prices, or reduced availability of fuel. An increase in fuel prices, continued price volatility, or reduced availability of fuel, particularly in the United States, could result in weakening of demand for relatively more-profitable large cars, utilities, and trucks, while increasing demand for relatively less-profitable small vehicles. Continuation or acceleration of such a trend beyond our current planning assumption, or volatility in demand across segments, could have a substantial adverse effect on our financial condition and results of operations.

Item 1A. Risk Factors (Continued)

Continued or increased price competition resulting from industry excess capacity, currency fluctuations, or other factors. The global automotive industry is intensely competitive, with manufacturing capacity far exceeding current demand. According to the December 2015 report issued by IHS Automotive, the global automotive industry is estimated to have had excess capacity of about 31 million units in 2015. Industry overcapacity has resulted in many manufacturers offering marketing incentives on vehicles in an attempt to maintain and grow market share; these incentives historically have included a combination of subsidized financing or leasing programs, price rebates, and other incentives. As a result, we are not necessarily able to set our prices to offset higher costs of marketing incentives, commodity or other cost increases, or the impact of adverse currency fluctuations, including pricing advantages foreign competitors may have because of their weaker home market currencies. Continuation of or increased excess capacity could have a substantial adverse effect on our financial condition and results of operations.

Fluctuations in foreign currency exchange rates, commodity prices, and interest rates. As a resource-intensive manufacturing operation, we are exposed to a variety of market and asset risks, including the effects of changes in foreign currency exchange rates, commodity prices, and interest rates. These risks affect our Automotive and Financial Services sectors. We monitor and manage these exposures as an integral part of our overall risk management program, which recognizes the unpredictability of markets and seeks to reduce potentially adverse effects on our business. Nevertheless, changes in currency exchange rates, commodity prices, and interest rates cannot always be predicted or hedged. In addition, because of intense price competition and our high level of fixed costs, we may not be able to address such changes even if foreseeable. As a result, substantial unfavorable changes in foreign currency exchange rates, commodity prices, or interest rates could have a substantial adverse effect on our financial condition and results of operations. See “Overview” to Item 7 and Item 7A for additional discussion of currency, commodity price, and interest rate risks.

Adverse effects resulting from economic, geopolitical, or other events. With the increasing interconnectedness of global economic and financial systems, a financial crisis, natural disaster, geopolitical crisis, or other significant event in one area of the world can have an immediate and devastating impact on markets around the world. For example, the financial crisis that began in the United States in 2008 quickly spread to other markets; natural disasters in Japan and Thailand during 2011 caused production interruptions and delays not just in Asia Pacific but other regions around the world; and episodes of increased geopolitical tensions or acts of terrorism have at times caused adverse reactions that may spread to economies around the globe.

Concerns persist regarding the sustainability of the European currency area (“euro area”) and of the larger European Union, which includes the United Kingdom. The pending decision by the U.K. electorate on whether to remain in the European Union has exacerbated concerns regarding the overall stability of the European Union, given the diverse economic and political circumstances of individual euro area countries. If a country within the euro area were to default on its debt or withdraw from the euro currency, or—in a more extreme circumstance—the euro currency were to be dissolved entirely, the impact on markets around the world, and on Ford’s global business, could be immediate and significant. The exit of the United Kingdom from the European Union would have less extreme but still significant implications. Such scenarios—or the perception that such developments are imminent—could adversely affect the value of our euro- and pound-denominated assets and obligations. In addition, such developments could cause financial and capital markets within and outside Europe to constrict, thereby negatively impacting our ability to finance our business, and also could cause a substantial dip in consumer confidence and spending that could negatively impact sales of vehicles. Any one of these impacts could have a substantial adverse effect on our financial condition and results of operations.

In addition, we have operations in various markets with volatile economic or political environments and are pursuing growth opportunities in a number of newly developed and emerging markets. These investments may expose us to heightened risks of economic, geopolitical, or other events, including governmental takeover (i.e., nationalization) of our manufacturing facilities or intellectual property, restrictive exchange or import controls, disruption of operations

as a result of systemic political or economic instability, outbreak of war or expansion of hostilities, and acts of terrorism, each of which could have a substantial adverse effect on our financial condition and results of operations. Further, the U.S. government, other governments and international organizations could impose additional sanctions that could restrict us from doing business directly or indirectly in or with certain countries or parties, which could include affiliates.

Item 1A. Risk Factors (Continued)

Economic distress of suppliers that may require Ford to provide substantial financial support or take other measures to ensure supplies of components or materials and could increase costs, affect liquidity, or cause production constraints or disruptions. The automotive industry supply base experienced increased economic distress due to the sudden and substantial drop in industry sales volumes beginning in 2008. Dramatically lower industry sales volume made existing debt obligations and fixed cost levels difficult for many suppliers to manage, increasing pressure on the supply base. As a result, suppliers not only were less willing to reduce prices, but some requested direct or indirect price increases as well as new and shorter payment terms. At times, we have had to provide financial assistance to key suppliers to ensure an uninterrupted supply of materials and components. In addition, suppliers may continue to exit certain lines of business or close facilities due to economic concerns, management turnover, or other reasons. In such cases, we generally experience additional costs associated with transitioning to new suppliers. Each of these factors could have a substantial adverse effect on our financial condition and results of operations.

Work stoppages at Ford or supplier facilities or other limitations on production (whether as a result of labor disputes, natural or man-made disasters, tight credit markets or other financial distress, production constraints or difficulties, or other factors). A work stoppage or other limitation on production could occur at Ford or supplier facilities for any number of reasons, including as a result of disputes under existing collective bargaining agreements with labor unions or in connection with negotiation of new collective bargaining agreements, or as a result of supplier financial distress or other production constraints or difficulties, or for other reasons. Recent examples of situations that have affected industry production to varying degrees include: supplier financial distress due to reduced production volumes during the economic downturn in 2008–2009; capacity constraints as suppliers that restructured or downsized during the downturn work to satisfy growing industry volumes; short-term constraints on production as consumer preferences shift more fluidly across vehicle segments and features; and the impact on certain suppliers of natural disasters during 2011. As indicated, a work stoppage or other limitations on production at Ford or supplier facilities for any reason (including but not limited to labor disputes, natural or man-made disasters, tight credit markets or other financial distress, or production constraints or difficulties) could have a substantial adverse effect on our financial condition and results of operations.

Single-source supply of components or materials. Many components used in our vehicles are available only from a single supplier and cannot be re-sourced quickly or inexpensively to another supplier (due to long lead times, new contractual commitments that may be required by another supplier before ramping up to provide the components or materials, etc.). In addition to the general risks described above regarding interruption of supplies, which are exacerbated in the case of single-source suppliers, the exclusive supplier of a key component potentially could exert significant bargaining power over price, quality, warranty claims, or other terms relating to a component.

Labor or other constraints on Ford's ability to maintain competitive cost structure. Substantially all of the hourly employees in our Automotive operations in the United States and Canada are represented by unions and covered by collective bargaining agreements. We negotiated a four-year agreement with the UAW in 2015 and will negotiate a new agreement with Unifor (formerly the Canadian Auto Workers Union) in 2016. Although we have negotiated transformational agreements in recent years, these agreements provide guaranteed wage and benefit levels throughout the contract term and some degree of income security, subject to certain conditions. As a practical matter, these agreements may restrict our ability to close plants and divest businesses. A substantial number of our employees in other regions are represented by unions or government councils, and legislation or custom promoting retention of manufacturing or other employment in the state, country, or region may constrain as a practical matter our ability to sell or close manufacturing or other facilities.

Substantial pension and postretirement health care and life insurance liabilities impairing liquidity or financial condition. We have defined benefit retirement plans in the United States that cover many of our hourly and salaried employees. We also provide pension benefits to non-U.S. employees and retirees, primarily in Europe. In addition, we and certain of our subsidiaries sponsor plans to provide other postretirement benefits ("OPEB") for retired employees

(primarily health care and life insurance benefits). See Note 12 of the Notes to the Financial Statements for more information about these plans. These benefit plans impose significant liabilities on us that are not fully funded and will require additional cash contributions, which could impair our liquidity.

Item 1A. Risk Factors (Continued)

Our qualified U.S. defined benefit pension plans are subject to Title IV of the Employee Retirement Income Security Act of 1974 (“ERISA”). Under Title IV of ERISA, the Pension Benefit Guaranty Corporation (“PBGC”) has the authority under certain circumstances or upon the occurrence of certain events to terminate a qualified underfunded pension plan. One such circumstance is the occurrence of an event that unreasonably increases the risk of unreasonably large losses to the PBGC. Although we believe it is unlikely that the PBGC would terminate any of our plans, in the event that our qualified U.S. pension plans were terminated at a time when the liabilities of the plans exceeded the assets of the plans, we would incur a liability to the PBGC that could be equal to the entire amount of the underfunding.

If our cash flows and capital resources were insufficient to fund our pension or OPEB obligations, we could be forced to reduce or delay investments and capital expenditures, suspend dividend payments, seek additional capital, or restructure or refinance our indebtedness.

Worse-than-assumed economic and demographic experience for postretirement benefit plans (e.g., discount rates or investment returns). The measurement of our obligations, costs, and liabilities associated with benefits pursuant to our postretirement benefit plans requires that we estimate the present value of projected future payments to all participants. We use many assumptions in calculating these estimates, including assumptions related to discount rates, investment returns on designated plan assets, and demographic experience (e.g., mortality and retirement rates). To the extent actual results are less favorable than our assumptions, there could be a substantial adverse impact on our financial condition and results of operations. For discussion of our assumptions, see “Critical Accounting Estimates” in Item 7 and Note 12 of the Notes to the Financial Statements.

Restriction on use of tax attributes from tax law “ownership change.” Section 382 of the U.S. Internal Revenue Code restricts the ability of a corporation that undergoes an ownership change to use its tax attributes, including net operating losses and tax credits (“Tax Attributes”). At December 31, 2015, we had Tax Attributes that would offset more than \$15 billion of taxable income. For these purposes, an ownership change occurs if 5 percent shareholders of an issuer’s outstanding common stock, collectively, increase their ownership percentage by more than 50 percentage points over a rolling three-year period. In 2015, we renewed for an additional three-year period our tax benefit preservation plan (the “Plan”) to reduce the risk of an ownership change under Section 382. Under the Plan, shares held by any person who acquires, without the approval of our Board of Directors, beneficial ownership of 4.99% or more of our outstanding Common Stock could be subject to significant dilution. The renewal is subject to shareholder approval at our annual meeting in May 2016.

The discovery of defects in vehicles resulting in delays in new model launches, recall campaigns, or increased warranty costs. Meeting or exceeding many government-mandated safety standards is costly and often technologically challenging, especially where standards may be in tension with the need to reduce vehicle weight in order to meet government-mandated emissions and fuel-economy standards. Government safety standards also require manufacturers to remedy defects related to vehicle safety through safety recall campaigns, and a manufacturer is obligated to recall vehicles if it determines that the vehicles do not comply with a safety standard. In addition, the introduction of new and innovative features and technology to our vehicles could increase the risk of defects or customer dissatisfaction. In 2014 and 2015, there was an unprecedented increase in the number of vehicles involved in safety recalls by manufacturers in the United States. The increase reflects NHTSA’s continued expansion of its definition of safety defects under the Safety Act. In addition, NHTSA’s enforcement strategy shifted to a significant increase in civil penalties levied and the use of consent orders requiring direct oversight by NHTSA of certain manufacturers’ safety processes, a trend that could continue. Should we or government safety regulators determine that a safety or other defect or a noncompliance exists with respect to certain of our vehicles prior to the start of production, the launch of such vehicle could be delayed until such defect is remedied. The costs associated with any protracted delay in new model launches necessary to remedy such defects, or the cost of recall campaigns or warranty costs to remedy such defects in vehicles that have been sold, could be substantial. These recall and warranty costs could be exacerbated to the extent they relate to global platforms. Furthermore, launch delays or recall actions also

could adversely affect our reputation or market acceptance of our products as discussed above under “Lower-than-anticipated market acceptance of Ford’s new or existing products or services.”

Item 1A. Risk Factors (Continued)

Increased safety, emissions, fuel economy, or other regulations resulting in higher costs, cash expenditures, and/or sales restrictions. The worldwide automotive industry is governed by a substantial amount of government regulation, which often differs by state, region, and country. Government regulation has arisen, and proposals for additional regulation are advanced, primarily out of concern for the environment (including concerns about the possibility of global climate change and its impact), vehicle safety, and energy independence. For example, as discussed above under “Item 1. Business - Governmental Standards,” in the United States the CAFE standards for light duty vehicles are 35.5 mpg by the 2016 model year, 45 mpg by the 2021 model year, and 54.5 mpg by the 2025 model year; EPA’s parallel CO₂ emission regulations impose similar standards. California’s ZEV rules also mandate steep increases in the sale of electric vehicles and other advanced technology vehicles beginning in the 2018 model year. In addition, many governments regulate local product content and/or impose import requirements as a means of creating jobs, protecting domestic producers, and influencing the balance of payments.

In recent years, we have made significant changes to our product cycle plan to improve the overall fuel economy of vehicles we produce, thereby reducing their GHG emissions. There are limits on our ability to achieve fuel economy improvements over a given time frame, however, primarily relating to the cost and effectiveness of available technologies, consumer acceptance of new technologies and changes in vehicle mix, willingness of consumers to absorb the additional costs of new technologies, the appropriateness (or lack thereof) of certain technologies for use in particular vehicles, the widespread availability (or lack thereof) of supporting infrastructure for new technologies, and the human, engineering, and financial resources necessary to deploy new technologies across a wide range of products and powertrains in a short time. The current fuel economy, CO₂, and ZEV standards will be difficult to meet if fuel prices remain relatively low and market conditions do not drive consumers to purchase electric vehicles and other highly fuel-efficient vehicles in large numbers.

The U.S. government has initiated an enforcement action against a major competitor in connection with its alleged use of “defeat devices” in hundreds of thousands of light duty diesel vehicles. The emergence of this issue has led to increased scrutiny of automaker emission testing by regulators around the world. This may lead to new regulations, more stringent enforcement programs, requests for field actions, and/or delays in regulatory approvals. The cost to comply with existing government regulations is substantial and additional regulations or changes in consumer preferences that affect vehicle mix could have a substantial adverse impact on our financial condition and results of operations. For more discussion of the impact of such standards on our global business, see the “Governmental Standards” discussion in “Item 1. Business” above. In addition, a number of governments, as well as non-governmental organizations, publicly assess vehicles to their own protocols. The protocols could change aggressively, and any negative perception regarding the performance of our vehicles subjected to such tests could reduce future sales.

Unusual or significant litigation, governmental investigations, or adverse publicity arising out of alleged defects in products, perceived environmental impacts, or otherwise. We spend substantial resources ensuring that we comply with governmental safety regulations, mobile and stationary source emissions regulations, and other standards. Compliance with governmental standards, however, does not necessarily prevent individual or class actions, which can entail significant cost and risk. In certain circumstances, courts may permit tort claims even where our vehicles comply with federal and/or other applicable law. Furthermore, simply responding to actual or threatened litigation or government investigations of our compliance with regulatory standards, whether related to our products or business or commercial relationships, may require significant expenditures of time and other resources. Litigation also is inherently uncertain, and we could experience significant adverse results. In addition, adverse publicity surrounding an allegation may cause significant reputational harm that could have a significant adverse effect on our sales.

A change in requirements under long-term supply arrangements committing Ford to purchase minimum or fixed quantities of certain parts, or to pay a minimum amount to the seller (“take-or-pay” contracts). We have entered into a number of long-term supply contracts that require us to purchase a fixed quantity of parts to be used in the production of our vehicles. If our need for any of these parts were to lessen, we could still be required to purchase a specified

quantity of the part or pay a minimum amount to the seller pursuant to the take-or-pay contract, which could have a substantial adverse effect on our financial condition or results of operations.

Item 1A. Risk Factors (Continued)

Adverse effects on results from a decrease in or cessation or clawback of government incentives related to investments. We receive economic benefits from national, state, and local governments in various regions of the world in the form of incentives designed to encourage manufacturers to establish, maintain, or increase investment, workforce, or production. These incentives may take various forms, including grants, loan subsidies, and tax abatements or credits. The impact of these incentives can be significant in a particular market during a reporting period. For example, most of our manufacturing facilities in South America are located in Brazil, where the state or federal governments have historically offered, and continue to offer, significant incentives to manufacturers to encourage capital investment, increase manufacturing production, and create jobs. As a result, the performance of our South American operations has been impacted favorably by government incentives to a substantial extent. In Brazil, however, the federal government has levied assessments against us concerning our calculation of federal incentives we received, and certain states have challenged the grant to us of tax incentives by the state of Bahia, including a constitutional challenge of state incentives that is pending in Brazil's Supreme Court. A decrease in, expiration without renewal of, or other cessation or clawback of government incentives for any of our business units, as a result of administrative decision or otherwise, could have a substantial adverse impact on our financial condition and results of operations. See Note 2 of the Notes to the Financial Statements for discussion of our accounting for government incentives, and "Item 3. Legal Proceedings" for a discussion of tax proceedings in Brazil and the potential requirement for us to post collateral.

Inherent limitations of internal controls impacting financial statements and safeguarding of assets. Our internal control over financial reporting and our operating internal controls may not prevent or detect misstatements or loss of assets because of inherent limitations, including the possibility of human error, the circumvention or overriding of controls, or fraud. Effective internal controls can provide only reasonable assurance with respect to financial statement accuracy and safeguarding of assets.

Cybersecurity risks to operational systems, security systems, or infrastructure owned by Ford, Ford Credit, or a third-party vendor or supplier. We are at risk for interruptions, outages, and breaches of: (i) operational systems (including business, financial, accounting, product development, consumer receivables, data processing, or manufacturing processes); (ii) facility security systems; and/or (iii) in-vehicle systems or mobile devices. Such cyber incidents could materially disrupt operational systems; result in loss of trade secrets or other proprietary or competitively sensitive information; compromise personally identifiable information of customers, employees, or others; jeopardize the security of our facilities; and/or affect the performance of in-vehicle systems. A cyber incident could be caused by malicious third parties using sophisticated, targeted methods to circumvent firewalls, encryption, and other security defenses, including hacking, fraud, trickery, or other forms of deception. The techniques used by third parties change frequently and may be difficult to detect for long periods of time. A significant cyber incident could impact production capability, harm our reputation and/or subject us to regulatory actions or litigation.

Failure of financial institutions to fulfill commitments under committed credit and liquidity facilities. Under our Third Amended and Restated Credit Agreement dated as of April 30, 2015 and as further amended (the "revolving credit facility"), we are able to borrow, repay, and then re-borrow up to \$13.4 billion. Certain of our subsidiaries have standby or revolving credit facilities on which they depend for liquidity. If the financial institutions that provide commitments under the revolving credit facility, our subsidiaries' standby or revolving credit facilities, or other committed credit facilities were to default on their obligation to fund the commitments, these facilities would not be available to us, which could substantially adversely affect our liquidity and financial condition. For discussion of our Credit Agreement, see "Liquidity and Capital Resources" in Item 7 and Note 13 of the Notes to the Financial Statements.

Item 1A. Risk Factors (Continued)

Inability of Ford Credit to access debt, securitization, or derivative markets around the world at competitive rates or in sufficient amounts, due to credit rating downgrades, market volatility, market disruption, regulatory requirements, or other factors. Ford Credit's ability to obtain unsecured funding at a reasonable cost is dependent on its credit ratings or its perceived creditworthiness. Ford Credit's ability to obtain securitized funding under its committed asset-backed liquidity programs and certain other asset-backed securitization transactions is subject to having a sufficient amount of assets eligible for these programs, as well as Ford Credit's ability to obtain appropriate credit ratings and, for certain committed programs, derivatives to manage the interest rate risk. Over time, and particularly in the event of any credit rating downgrades, market volatility, market disruption, or other factors, Ford Credit may reduce the amount of receivables it purchases or originates because of funding constraints. In addition, Ford Credit may be limited in the amount of receivables it purchases or originates in certain countries or regions if the local capital markets, particularly in developing countries, do not exist or are not adequately developed. Similarly, Ford Credit may reduce the amount of receivables it purchases or originates if there is a significant decline in the demand for the types of securities it offers or Ford Credit is unable to obtain derivatives to manage the interest rate risk associated with its securitization transactions. A significant reduction in the amount of receivables Ford Credit purchases or originates would significantly reduce its ongoing profits and could adversely affect its ability to support the sale of Ford vehicles.

Higher-than-expected credit losses, lower-than-anticipated residual values, or higher-than-expected return volumes for leased vehicles. Credit risk is the possibility of loss from a customer's or dealer's failure to make payments according to contract terms. Credit risk (which is heavily dependent upon economic factors including unemployment, consumer debt service burden, personal income growth, dealer profitability, and used car prices) has a significant impact on Ford Credit's business. The level of credit losses Ford Credit may experience could exceed its expectations and adversely affect its financial condition and results of operations. In addition, Ford Credit projects expected residual values (including residual value support payments from Ford) and return volumes for the vehicles it leases. Actual proceeds realized by Ford Credit upon the sale of returned leased vehicles at lease termination may be lower than the amount projected, which would reduce the profitability of the lease transaction. Among the factors that can affect the value of returned lease vehicles are the volume of vehicles returned, economic conditions, and quality or perceived quality, safety, fuel efficiency, or reliability of the vehicles. Actual return volumes may be higher than expected and can be influenced by contractual lease-end values relative to auction values, marketing programs for new vehicles, and general economic conditions. Each of these factors, alone or in combination, has the potential to adversely affect Ford Credit's profitability if actual results were to differ significantly from Ford Credit's projections. See "Critical Accounting Estimates" in Item 7 for additional discussion.

Increased competition from banks, financial institutions, or other third parties seeking to increase their share of financing Ford vehicles. No single company is a dominant force in the automotive finance industry. Most of Ford Credit's bank competitors in the United States use credit aggregation systems that permit dealers to send, through standardized systems, retail credit applications to multiple finance sources to evaluate financing options offered by these sources. Also, direct on-line or large dealer group financing options provide consumers with alternative finance sources and/or increased pricing transparency. All of these financing alternatives drive greater competition based on financing rates and terms. Competition from such institutions and alternative finance sources could adversely affect Ford Credit's profitability and the volume of its retail business. In addition, Ford Credit may face increased competition on wholesale financing for Ford dealers.

New or increased credit regulations, consumer or data protection regulations, or other regulations resulting in higher costs and/or additional financing restrictions. As a finance company, Ford Credit is highly regulated by governmental authorities in the locations in which it operates, which can impose significant additional costs and/or restrictions on its business. In the United States, for example, Ford Credit's operations are subject to regulation, supervision, and licensing under various federal, state, and local laws and regulations, including the federal Truth-in-Lending Act, Consumer Leasing Act, Equal Credit Opportunity Act, and Fair Credit Reporting Act.

Item 1A. Risk Factors (Continued)

Congress also passed the Dodd-Frank Wall Street Reform and Consumer Protection Act (“Dodd-Frank Act”) in 2010 to reform practices in the financial services industries, including automotive financing and securitizations. The Dodd-Frank Act directs federal agencies to adopt rules to regulate the consumer finance industry and the capital markets and, among other things, gives the Consumer Financial Protection Bureau (“CFPB”) broad rule-making and enforcement authority for a wide range of consumer financial protection laws that regulate consumer finance businesses, such as Ford Credit’s retail automotive financing business. Exercise of these powers by the CFPB may increase the costs of, impose additional restrictions on, or otherwise adversely affect companies in the automotive finance business. For example, in March 2013, the CFPB issued a bulletin recommending that indirect vehicle lenders, a class that includes Ford Credit, take steps to monitor and/or impose controls over dealer discretionary pricing. Effective August 31, 2015, the CFPB has authority to supervise and examine the largest nonbank automotive finance companies, such as Ford Credit, for compliance with consumer financial protection laws.

In addition, the Dodd-Frank Act provides that a nonbank financial company could be designated a “systemically important financial institution” by the Financial Stability Oversight Council and thus be subject to supervision by the Board of Governors of the Federal Reserve System. Such a designation would mean that a nonbank finance company such as Ford Credit, in effect, could be regulated like a bank with respect to capital and other requirements, but without the benefits of being a bank—such as the ability to offer Federal Deposit Insurance Corporation (“FDIC”) insured deposits.

The Dodd-Frank Act also creates an alternative liquidation framework under which the FDIC may be appointed as receiver of a nonbank financial company if the U.S. Treasury Secretary (in consultation with the President of the United States) determines that the company is in default or danger of default and the resolution of the company under other applicable law (e.g., U.S. bankruptcy law) would have serious adverse effects on the financial stability of the United States. The FDIC’s powers under this framework may vary from those of a bankruptcy court under U.S. bankruptcy law, which could adversely impact securitization markets, including Ford Credit’s funding activities, regardless of whether Ford Credit ever is determined to be subject to the Dodd-Frank Act’s alternative liquidation framework.

In some countries outside the United States, some of Ford Credit’s subsidiaries are regulated banking institutions and are required, among other things, to maintain minimum capital and liquidity. In many other locations, governmental authorities require companies to have licenses in order to conduct financing businesses. Compliance with these laws and regulations imposes additional costs on Ford Credit and affects the conduct of its business. Additional regulation could add significant cost or operational constraints that might impair Ford Credit’s profitability.

ITEM 1B. Unresolved Staff Comments.

None.

ITEM 2. Properties.

Our principal properties include manufacturing and assembly facilities, distribution centers, warehouses, sales or administrative offices, and engineering centers.

We own substantially all of our U.S. manufacturing and assembly facilities. Our facilities are situated in various sections of the country and include assembly plants, engine plants, casting plants, metal stamping plants, transmission plants, and other component plants. About half of our distribution centers are leased (we own approximately 50% of the total square footage, and lease the balance). A substantial amount of our warehousing is provided by third-party providers under service contracts. Because the facilities provided pursuant to third-party service contracts need not be dedicated exclusively or even primarily to our use, these spaces are not included in the number of distribution centers/warehouses listed in the table below. The majority of the warehouses that we operate are leased, although many of our manufacturing and assembly facilities contain some warehousing space. Substantially all of our sales offices are leased space. Approximately 98% of the total square footage of our engineering centers and our supplementary research and development space is owned by us.

In addition, we maintain and operate manufacturing plants, assembly facilities, parts distribution centers, and engineering centers outside of the United States. We own substantially all of our non-U.S. manufacturing plants, assembly facilities, and engineering centers. The majority of our parts distribution centers outside of the United States are either leased or provided by vendors under service contracts.

We and the entities that we consolidated as of December 31, 2015 use eight regional engineering, research, and development centers, and 67 manufacturing plants as shown in the table below:

Segment	Plants
North America	29
South America	8
Europe	16
Middle East & Africa	2
Asia Pacific	12
Total	67

Included in the number of plants shown above are plants that are operated by us or our consolidated joint ventures that support our Automotive sector. The significant consolidated joint ventures and the number of plants each owns are as follows:

Ford Lio Ho Motor Company Ltd. (“FLH”) — a joint venture in Taiwan among Ford (70% partner), the Lio Ho Group (25% partner), and individual shareholders (5% ownership in aggregate) that assembles a variety of Ford and Mazda vehicles sourced from Ford as well as Mazda. In addition to domestic assembly, FLH imports Ford brand built-up vehicles from the Asia Pacific region, Europe, and the United States. The joint venture operates one plant in Taiwan.

Ford Sollers Netherlands B.V. (“Ford Sollers”) — a 50/50 joint venture between Ford and Sollers OJSC (“Sollers”), in which Ford has control. The joint venture primarily is engaged in manufacturing a range of Ford passenger cars and light commercial vehicles for sale in Russia, and has an exclusive right to manufacture, assemble, and distribute certain Ford vehicles in Russia through the licensing of certain trademarks and intellectual property rights. The joint venture has been approved to participate in Russia’s industrial assembly regime, which qualifies it for reduced import duties for parts imported into Russia. In addition to its three existing manufacturing facilities in Russia, Ford Sollers launched an engine plant in Russia in 2015.

•

Ford Vietnam Limited — a joint venture between Ford (75% partner) and Diesel Song Cong One Member Limited Liability Company (a subsidiary of the Vietnam Engine and Agricultural Machinery Corporation, which in turn is owned by the State of Vietnam represented by the Ministry of Industry and Trade) (25% partner). Ford Vietnam Limited assembles and distributes a variety of Ford passenger and commercial vehicle models. The joint venture operates one plant in Vietnam.

Item 2. Properties (Continued)

In addition to the plants that we operate directly or that are operated by our consolidated joint ventures, additional plants that support our Automotive sector are operated by unconsolidated joint ventures of which we are a partner. These plants are not included in the number of plants shown in the table above. The most significant of the automotive unconsolidated joint ventures are as follows:

• AutoAlliance (Thailand) Co., Ltd. (“AAT”) — a 50/50 joint venture between Ford and Mazda that owns and operates a manufacturing plant in Rayong, Thailand. AAT produces Ford and Mazda products for domestic and export sales.

• Changan Ford Automobile Corporation, Ltd. (“CAF”) — a 50/50 joint venture between Ford and Chongqing Changan Automobile Co., Ltd. (“Changan”). CAF currently operates five assembly plants, an engine plant, and a transmission plant in China where it produces and distributes an expanding variety of Ford passenger vehicle models.

Changan Ford Mazda Engine Company, Ltd. (“CFME”) — a joint venture among Ford (25% partner), Mazda (25% partner), and Changan (50% partner). CFME is located in Nanjing, and produces engines for Ford and Mazda vehicles manufactured in China.

• Ford Otomotiv Sanayi Anonim Sirketi (“Ford Otosan”) — a joint venture in Turkey among Ford (41% partner), the Koc Group of Turkey (41% partner), and public investors (18%) that is a major supplier to us of the Transit, Transit Custom, and Transit Courier commercial vehicles and is our sole distributor of Ford vehicles in Turkey. Ford Otosan also makes the Cargo truck for the Turkish and export markets, and certain engines and transmissions, most of which are under license from us. The joint venture owns two plants, a parts distribution depot, a product development center, and a new research and development center in Turkey.

Getrag Ford Transmissions GmbH (“GFT”) — a 50/50 joint venture with Getrag International GmbH, a German company. GFT operates plants in Halewood, England; Cologne, Germany; Bordeaux, France; and Kechnex, Slovakia to produce, among other things, manual transmissions for our Europe business unit.

• JMC — a publicly-traded company in China with Ford (32% shareholder) and Jiangling Holdings, Ltd. (41% shareholder) as its controlling shareholders. Jiangling Holdings, Ltd. is a 50/50 joint venture between Changan and Jiangling Motors Company Group. The public investors in JMC own 27% of its total outstanding shares. JMC assembles Ford Transit, Ford Everest, Ford engines, and non-Ford vehicles and engines for distribution in China and in other export markets. JMC operates two assembly plants and one engine plant in Nanchang. In 2015, JMC opened a new plant in Taiyuan to assemble heavy duty trucks and engines.

The facilities described above are, in the opinion of management, suitable and adequate for the manufacture and assembly of our and our joint ventures’ products.

The furniture, equipment, and other physical property owned by our Financial Services operations are not material in relation to the operations’ total assets.

ITEM 3. Legal Proceedings.

The litigation process is subject to many uncertainties, and the outcome of individual matters is not predictable with assurance. See Note 27 of the Notes to the Financial Statements for discussion of loss contingencies. Following is a discussion of our significant pending legal proceedings:

PRODUCT LIABILITY MATTERS

We are a defendant in numerous actions in state and federal courts within and outside of the United States alleging damages from injuries resulting from (or aggravated by) alleged defects in our vehicles. In many, no monetary amount of damages is specified, or the specific amount alleged is the jurisdictional minimum. Our experience with litigation alleging a specific amount of damages suggests that such amounts, on average, bear little relation to the actual amount of damages, if any, that we will pay in resolving such matters.

In addition to pending actions, we assess the likelihood of incidents that likely have occurred but not yet been reported to us; we also take into consideration specific matters that have been raised as claims but have not yet proceeded to litigation. Individual product liability matters which, if resolved unfavorably to the Company, likely would involve a significant cost would be described herein. Currently there are no such matters to report.

ASBESTOS MATTERS

Asbestos was used in some brakes, clutches, and other automotive components from the early 1900s. Along with other vehicle manufacturers, we have been the target of asbestos litigation and, as a result, are a defendant in various actions for injuries claimed to have resulted from alleged exposure to Ford parts and other products containing asbestos. Plaintiffs in these personal injury cases allege various health problems as a result of asbestos exposure, either from component parts found in older vehicles, insulation or other asbestos products in our facilities, or asbestos aboard our former maritime fleet. We believe that we are being targeted more aggressively in asbestos suits because many previously-targeted companies have filed for bankruptcy, or emerged from bankruptcy relieved of liability for such claims.

Most of the asbestos litigation we face involves individuals who claim to have worked on the brakes of our vehicles. We are prepared to defend these cases, and believe that the scientific evidence confirms our long-standing position that there is no increased risk of asbestos-related disease as a result of exposure to the type of asbestos formerly used in the brakes on our vehicles. The extent of our financial exposure to asbestos litigation remains very difficult to estimate and could include both compensatory and punitive damage awards. The majority of our asbestos cases do not specify a dollar amount for damages; in many of the other cases the dollar amount specified is the jurisdictional minimum, and the vast majority of these cases involve multiple defendants, sometimes more than one hundred. Many of these cases also involve multiple plaintiffs, and often we are unable to tell from the pleadings which plaintiffs are making claims against us (as opposed to other defendants). Annual payout and defense costs may become significant in the future.

ENVIRONMENTAL MATTERS

We have received notices under various federal and state environmental laws that we (along with others) are or may be a potentially responsible party for the costs associated with remediating numerous hazardous substance storage, recycling, or disposal sites in many states and, in some instances, for natural resource damages. We also may have been a generator of hazardous substances at a number of other sites. The amount of any such costs or damages for which we may be held responsible could be significant.

We have two environmental legal proceedings to which a governmental authority is a party and in which we believe there is the possibility of monetary sanctions in excess of \$100,000:

Notices of Violation to Ford Chicago Assembly Plant and Dearborn Truck Plant. On August 17, 2015, the U.S. Environmental Protection Agency (the "EPA") issued a notice of violation to our Chicago Assembly Plant and on December 26, 2015 the EPA issued a notice of violation to our Dearborn Truck Plant. The EPA alleges that the plants violated several requirements related to their air permits. Monetary sanctions, if any, have not yet been determined.

Item 3. Legal Proceedings (Continued)

CLASS ACTIONS

In light of the fact that very few of the purported class actions filed against us in the past have ever been certified by the courts as class actions, in general we list those actions that (i) have been certified as a class action by a court of competent jurisdiction (and any additional purported class actions that raise allegations substantially similar to an existing and certified class), and (ii) likely would involve a significant cost if resolved unfavorably to the Company. At this time, we have no such purported class actions filed against us.

OTHER MATTERS

Brazilian Tax Matters. Two Brazilian states and the Brazilian federal tax authority currently have outstanding substantial tax assessments against Ford Brazil related to state and federal tax incentives Ford Brazil receives for its operations in the Brazilian state of Bahia. All assessments have been appealed to the relevant administrative court of each jurisdiction. For each assessment, if we do not prevail at the administrative level, we plan to appeal to the relevant state or federal judicial court, which would likely require us to post significant collateral in order to proceed. Our appeals with one state and the federal tax authority remain at the administrative level. In the other state, where two cases are pending, we have appealed to the judicial court and to date we have not been required to post collateral.

Transit Connect Customs Ruling. On March 8, 2013, U.S. Customs and Border Protection (“CBP”) ruled that Transit Connects imported as passenger wagons and later converted into cargo vans are subject to the 25% duty applicable to cargo vehicles, rather than the 2.5% duty applicable to passenger vehicles. As a result of the ruling, CBP is requiring Ford to pay the 25% duty upon importation of Transit Connects that will be converted to cargo vehicles, and is seeking the difference in duty rates for prior imports. Our protest of the ruling within CBP was denied and we filed a challenge in the U.S. Court of International Trade (“CIT”). A decision by CIT may be appealed to the U.S. Court of Appeals for the Federal Circuit. If we prevail, we will receive a refund of the contested amounts paid, plus interest. If we do not prevail, CBP would recover the increased duties for prior imports, plus interest, and might assert a claim for penalties.

ITEM 4. Mine Safety Disclosures.

Not applicable.

ITEM 4A. Executive Officers of Ford.

Our executive officers are as follows, along with each executive officer's position and age at February 1, 2016:

Name	Position	Position Held Since	Age
William Clay Ford, Jr. (a)	Executive Chairman and Chairman of the Board	Sept. 2006	58
Mark Fields (b)	President and Chief Executive Officer	Jul. 2014	55
James D. Farley, Jr.	Executive Vice President – President, Europe, Middle East & Africa	Jan. 2015	53
Joseph R. Hinrichs	Executive Vice President – President, The Americas	Dec. 2012	49
Stephen T. Odell	Executive Vice President – Global Marketing, Sales and Service	Jan. 2015	60
Raj Nair	Executive Vice President – Product Development and Chief Technical Officer	Dec. 2015	51
Bob Shanks	Executive Vice President and Chief Financial Officer	Apr. 2012	63
John Casesa	Group Vice President – Global Strategy	Mar. 2015	53
Ray Day	Group Vice President – Communications	Mar. 2013	49
Felicia Fields	Group Vice President – Human Resources and Corporate Services	Apr. 2008	50
Bennie Fowler	Group Vice President – Quality and New Model Launch	Apr. 2008	59
Bruce Hettle	Group Vice President – Manufacturing and Labor Affairs	Jan. 2016	54
Ziad S. Ojakli	Group Vice President – Government and Community Relations	Jan. 2004	48
Dave Schoch	Group Vice President – President, Asia Pacific	Dec. 2012	64
Bernard Silverstone	Group Vice President – Chairman and Chief Executive Officer, Ford Motor Credit Co.	Jan. 2013	60
Hau Thai-Tang	Group Vice President – Global Purchasing	Aug. 2013	49
Bradley M. Gayton	Vice President and General Counsel	Jan. 2016	52
Stuart Rowley	Vice President and Controller	Apr. 2012	48

(a) Also a Director, Chair of the Office of the Chairman and Chief Executive, Chair of the Finance Committee, and a member of the Sustainability Committee of the Board of Directors.

(b) Also a Director and member of the Office of the Chairman and Chief Executive and the Finance Committee of the Board of Directors.

Each of the officers listed above, except for John Casesa, has been employed by Ford or its subsidiaries in one or more capacities during the past five years. Prior to joining Ford in March 2015, John Casesa was Senior Managing Director of Guggenheim Partners, where he led the firm's automotive investment banking activities since 2010.

Under our by-laws, executive officers are elected by the Board of Directors at an annual meeting of the Board held for this purpose or by a resolution to fill a vacancy. Each officer is elected to hold office until a successor is chosen or as otherwise provided in the by-laws.

PART II.

ITEM 5. Market for Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.

Our Common Stock is listed on the New York Stock Exchange in the United States, and on certain stock exchanges in Belgium and France.

The table below shows the high and low sales prices for our Common Stock, and the dividends we paid per share of Common and Class B Stock, for each quarterly period in 2015 and 2014:

	2015				2014			
Ford Common Stock price per share (a)	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
High	\$16.74	\$16.16	\$15.30	\$15.84	\$16.78	\$17.35	\$18.12	\$16.13
Low	14.30	14.78	10.44	13.40	14.40	15.43	14.49	13.26
Dividends per share of Ford Common and Class B Stock	0.15	0.15	0.15	0.15	0.125	0.125	0.125	0.125

(a) New York Stock Exchange composite intraday prices as listed in the price history database available at www.NYSEnet.com.

As of February 4, 2016, stockholders of record of Ford included approximately 137,858 holders of Common Stock and 34 holders of Class B Stock.

In March 2015, we announced a modest anti-dilutive share repurchase program to offset the dilutive effect of share-based compensation granted in 2015. The plan authorized repurchases of up to 8.5 million shares of our Common Stock. We completed the program in July 2015.

ITEM 6. Selected Financial Data.

On December 31, 2015, we adopted a change in accounting method for certain components of expense related to our defined benefit pension and OPEB plans (see Note 1 of the Notes to the Financial Statements). We have applied the change in accounting method retrospectively to periods covered in this Report, and the amounts below reflect this change. The following table sets forth selected financial data for each of the last five years (dollar amounts in millions, except for per share amounts):

SUMMARY OF INCOME	2015	2014	2013	2012	2011
Total Company					
Revenues	\$149,558	\$144,077	\$146,917	\$133,559	\$135,605
Income before income taxes	\$10,252	\$1,234	\$14,371	\$2,005	\$3,687
Provision for/(Benefit from) income taxes	2,881	4	2,425	89	(13,207)

ITEM 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

OVERVIEW

Revenue

Our Automotive sector's revenue is generated primarily by sales of vehicles, parts, and accessories; we generally treat sales and marketing incentives as a reduction to revenue. Revenue is recorded when all risks and rewards of ownership are transferred to our customers (generally, our dealers and distributors). For the majority of sales, this occurs when products are shipped from our manufacturing facilities. This is not the case, however, with respect to vehicles produced for sale to daily rental car companies that are subject to a guaranteed repurchase option. These vehicles are accounted for as operating leases, with lease revenue and profits recognized over the term of the lease. Proceeds from the sale of vehicles at auction are recognized in revenue at the time of sale.

Most of the vehicles sold by us to our dealers and distributors are financed at wholesale by Ford Credit. Upon Ford Credit originating the wholesale receivable related to a dealer's purchase of a vehicle, Ford Credit pays cash to the relevant legal entity in our Automotive sector in payment of the dealer's obligation for the purchase price of the vehicle. The dealer then pays the wholesale finance receivable to Ford Credit when it sells the vehicle to a retail customer.

Our Financial Services sector's revenue is generated primarily from interest on finance receivables, net of certain deferred origination costs that are included as a reduction of financing revenue, and such revenue is recognized over the term of the receivable using the interest method. Also, revenue from operating leases is recognized on a straight-line basis over the term of the lease. Income is generated to the extent revenues exceed expenses, most of which are interest, depreciation, and operating expenses.

Transactions between our Automotive and Financial Services sectors occur in the ordinary course of business. For example, we offer special retail financing and lease incentives to dealers' customers who choose to finance or lease our vehicles from Ford Credit. The estimated cost for these incentives is recorded as revenue reduction to Automotive sales at the later of the date the related vehicle sales to our dealers are recorded or the date the incentive program is both approved and communicated. In order to compensate Ford Credit for the lower interest or lease rates offered to the retail customer, we pay the discounted value of the incentive directly to Ford Credit when it originates the retail finance or lease contract with the dealer's customer. Ford Credit recognizes the amount over the life of retail finance contracts as an element of financing revenue and over the life of lease contracts as a reduction to depreciation. See Note 1 of the Notes to the Financial Statements for a more detailed discussion of transactions and payments between our Automotive and Financial Services sectors.

Costs and Expenses

Our income statement classifies our Automotive total costs and expenses into two categories: (i) cost of sales, and (ii) selling, administrative, and other expenses. We include within cost of sales those costs related to the development, manufacture, and distribution of our vehicles, parts, and accessories. Specifically, we include in cost of sales each of the following: material costs (including commodity costs); freight costs; warranty, including product recall and customer satisfaction program costs; labor and other costs related to the development and manufacture of our products; depreciation and amortization; and other associated costs. We include within selling, administrative, and other expenses labor and other costs not directly related to the development and manufacture of our products, including such expenses as advertising and sales promotion costs.

Certain of our costs, such as material costs, generally vary directly with changes in volume and mix of production. In our industry, production volume often varies significantly from quarter to quarter and year to year. Quarterly

production volumes experience seasonal shifts throughout the year (including peak retail sales seasons, and the impact on production of model changeover and new product launches). As we have seen in recent years, annual production volumes are heavily impacted by external economic factors, including the pace of economic growth and factors such as the availability of consumer credit and cost of fuel.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

As a result, we analyze the profit impact of certain cost changes holding constant present-year volume and mix and currency exchange, in order to evaluate our cost trends absent the impact of varying production and currency exchange levels. We analyze these cost changes in the following categories:

• **Contribution Costs** – these costs typically vary with production volume. These costs include material, commodity, warranty, and freight and duty costs.

Structural Costs – these costs typically do not have a directly proportionate relationship to production volume. These costs include manufacturing, engineering, spending-related, advertising and sales promotion, administrative and selling, and pension and OPEB costs.

While contribution costs generally vary directly in proportion to production volume, elements within our structural costs category are impacted to differing degrees by changes in production volume. We also have varying degrees of discretion when it comes to controlling the different elements within our structural costs. For example, depreciation and amortization expense largely is associated with prior capital spending decisions. On the other hand, while labor costs do not vary directly with production volume, manufacturing labor costs may be impacted by changes in volume, for example when we increase overtime, add a production shift or add personnel to support volume increases. Other structural costs, such as advertising or engineering costs, do not necessarily have a directly proportionate relationship to production volume. Our structural costs generally are within our discretion, although to varying degrees, and can be adjusted over time in response to external factors.

We consider certain structural costs to be a direct investment in future growth and revenue. For example, increases in structural costs are necessary to grow our business and improve profitability as we expand around the world, invest in new products and technologies, respond to increasing industry sales volume, and grow our market share.

Automotive total costs and expenses for full-year 2015 was \$134.5 billion. Material and commodity costs make up the largest portion of our Automotive total costs and expenses, representing in 2015 about two-thirds of the total amount. Of the remaining balance of our Automotive costs and expenses, the largest piece is structural costs. Although material costs are our largest absolute cost, our margins can be affected significantly by changes in any category of costs.

Key Economic Factors and Trends Affecting the Automotive Industry

Currency Exchange Rate Volatility. The U.S. Federal Reserve raised its policy interest rate in December 2015, for the first time since 2006, and the resulting shifts in capital flows have contributed to downward pressure on several emerging market currencies. In some cases that pressure is aggravated by low commodity prices, high inflation, or unstable policy environments. Additionally, the yen and euro have depreciated as a result of monetary policy easing by the Bank of Japan and European Central Bank. The weak yen, in particular, adds significant potential downward pressure on vehicle pricing across many markets globally. In most markets, exchange rates are market-determined, and all are impacted by many different macroeconomic and policy factors, and thus likely to remain volatile. However, in some markets, exchange rates are heavily influenced or controlled by governments.

Excess Capacity. According to IHS Automotive, an automotive research firm, the estimated automotive industry global production capacity for light vehicles of about 119 million units exceeded global production by about 31 million units in 2015. In North America and Europe, two regions where a significant share of industry revenue is earned, excess capacity as a percent of production was an estimated 7% and 22%, respectively, in 2015. In China, the auto industry also witnessed excess capacity at 54% of production in 2015, as manufacturers competed to capitalize on China's future market potential. According to production capacity data projected by IHS Automotive, global excess capacity conditions could continue for several years at an average of about 33 million units per year during the period

from 2016 to 2020.

Pricing Pressure. Excess capacity, coupled with a proliferation of new products being introduced in key segments, will keep pressure on manufacturers' ability to increase prices. In North America, the industry restructuring of the past few years has allowed manufacturers to better match production with demand, although Japanese and Korean manufacturers also have capacity located outside of the region directed to North America. In the future, Chinese and Indian manufacturers are expected to enter U.S. and European markets, further intensifying competition. Over the long term, intense competition and excess capacity will continue to put downward pressure on inflation-adjusted prices for similarly-contented vehicles in the United States and contribute to a challenging pricing environment for the automotive industry. In Europe, the excess capacity situation was exacerbated by weakening demand and the lack of reductions in existing capacity, such that negative pricing pressure is expected to continue for the foreseeable future.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Commodity and Energy Price Changes. The price of oil has continued to decline in early 2016, after averaging under \$50 per barrel in 2015, as global supply remains strong despite the ongoing price pressures. Other commodity prices also have declined recently, but over the longer term prices are likely to trend higher given expectations for global demand growth.

Vehicle Profitability. Our financial results depend on the profitability of the vehicles we sell, which may vary significantly by vehicle line. In general, larger vehicles tend to command higher prices and be more profitable than smaller vehicles, both across and within vehicle segments. For example, in North America, our larger, more profitable vehicles had an average contribution margin that was about 135% of our total average contribution margin across all vehicles, whereas our smaller vehicles had significantly lower contribution margins. Government regulations aimed at reducing emissions and increasing fuel efficiency may increase the cost of vehicles by more than the perceived benefit to the consumer. Given the backdrop of excess capacity, these regulations could dampen contribution margins. As we execute our One Ford plan, we are working to create best-in-class vehicles on global platforms that contribute higher margins, and offering a more balanced portfolio of vehicles with which we aim to be among the leaders in fuel efficiency in every segment in which we compete.

Increasing Sales of Smaller Vehicles. Like other manufacturers, we are increasing our participation in newly-developed and emerging markets, such as Brazil, Russia, India, and China, in which vehicle sales are expected to increase at a faster rate than in most mature markets. The largest segments in these markets are small vehicles (i.e., Sub-B, B, and C segments). To increase our participation in these fast-growing markets, we are significantly increasing our production capacity, directly or through joint ventures. Although we expect positive contribution margins from higher small vehicle sales, one result of increased production of small vehicles may be that, over time, our average per unit margin decreases because small vehicles tend to have lower margins than medium and large vehicles.

Trade Policy. To the extent governments in various regions erect or intensify barriers to imports, or implement currency policy that advantages local exporters selling into the global marketplace, there can be a significant negative impact on manufacturers based in markets that promote free trade. While we believe the long-term trend is toward the growth of free trade, we have noted with concern recent developments in a number of regions. In Asia Pacific, for example, the recent dramatic depreciation of the yen significantly reduces the cost of exports into the United States, Europe, and other global markets by Japanese manufacturers. Over a period of time, the emerging weakness of the yen can contribute to other countries pursuing weak currency policies by intervening in the exchange rate markets. This is particularly likely in other Asian countries, such as South Korea. As another example, government actions in South America to incentivize local production and balance trade are driving trade frictions between South American countries and also with Mexico, resulting in business environment instability and new trade barriers. We will continue to monitor and address developing issues around trade policy.

Other Economic Factors. During 2015, mature market government bond yields and inflation were lower than expected, and there is a rising risk of persistent disinflation and, in some markets, even outright deflation. The lower levels of inflation and interest rates were unexpected partially because they have occurred against a backdrop of loose monetary policy and high levels of mature market deficits and debt. The eventual implications of higher government deficits and debt, with potentially higher long-term interest rates, may still drive a higher cost of capital over our planning period. Higher interest rates and/or taxes to address the higher deficits also may impede real growth in gross domestic product and, therefore, vehicle sales over our planning period.

For additional information on our assessment of the business environment, refer to the "Outlook" section below.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Trends and Strategies

The traditional global automotive industry achieves around \$2.3 trillion in revenue per year. Today, our share of this is about 6%. At the same time, transportation services, which includes services such as mass transit, taxis, and ride sharing, totals about \$5.4 trillion in revenue annually, and is expected to grow in the next 15 years. Yet, we and our auto industry competitors receive virtually none of the revenue from those transportation services. That is about to change. We see being an auto company and a mobility company as a significant opportunity, and we are very serious about investing in, innovating in, and leading in both.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Strengthening Today's Business. We are strengthening and investing in our core business of designing, developing, manufacturing, marketing, financing, and servicing cars, trucks, SUVs, and electrified vehicles. Having completed the launch of 16 new vehicles globally in 2015, we are planning another active product year in 2016 with 12 global product launches, including the new F-Series Super Duty, Ford GT, and Lincoln Continental. We will add more electrified products for Ford and Lincoln, including the new Focus Electric, which features all-new DC fast-charge capability delivering an 80% charge in an estimated 30 minutes and a projected 100-mile range. Through 2020, we plan to invest \$4.5 billion in electrified vehicle solutions. Strengthening our business includes restructuring the parts that have no reasonable prospect for profitability or are no longer relevant for the future we see for ourselves.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Pursuing Emerging Opportunities. At the same time that we are strengthening our core business, we are pursuing emerging opportunities through Ford Smart Mobility, our plan to be a leader in connectivity, mobility, autonomous vehicles, the customer experience, and data and analytics. We will have more to say concerning Ford Smart Mobility throughout the year, but a few of the highlights so far include:

SYNC Connect - by 2020, more than 10 million vehicles in North America will be equipped with SYNC Connect built-in modems. SYNC Connect will enhance our connected car capabilities by enabling our customers to lock, unlock, start, and locate vehicles using their smart phones.

Autonomous Vehicles - we are tripling our fleet of Fusion Hybrid autonomous research vehicles this year, making our fully-autonomous vehicle fleet the largest of all automakers. We are increasing autonomous testing at M-City and in California, and we are the first automaker to have tested autonomous vehicles in the snow.

FordPass - we are working to transform the automotive customer experience to be more enjoyable, starting with the introduction of FordPass. Through FordPass, customers will be able to connect with marketplace services (including parking solutions, ride sharing, car sharing, and multimodal transportation), solve mobility challenges with live "guides" who will help with their mobility challenges (all at the touch of a button), and access merchandise and unique experiences in collaboration with affinity partners (including McDonald's, 7-Eleven, and others).

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Our Three Priorities. As we strengthen our core business and prepare for emerging opportunities, we are staying focused on three priorities:

- accelerating the pace of progress on our One Ford plan,
- delivering product excellence with passion, and
- driving innovation in every part of our business.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

RESULTS OF OPERATIONS

On December 31, 2015, we adopted a change in accounting method for certain components of expense related to our defined benefit pension and OPEB plans (see Note 1 of the Notes to the Financial Statements). We have applied the change in accounting method retrospectively to periods covered in this Report, and the amounts below reflect this change.

TOTAL COMPANY

Our net income attributable to Ford Motor Company was \$7.4 billion or \$1.84 per share of Common and Class B Stock in 2015, an increase of \$6.1 billion or \$1.53 per share from 2014.

Our pre-tax results and net income were as follows:

	2015 (Mils.)	2014 (Mils.)	2013 (Mils.)
Pre-tax results			
Automotive sector pre-tax results (excl. special items)	\$8,772	\$5,499	\$8,423
Financial Services sector pre-tax results	2,028	1,794	1,672
Total Company pre-tax results (excl. special items)	10,800	7,293	10,095
Special items - Automotive sector	(548) (6,059) 4,276
Total Company pre-tax results (incl. special items)	10,252	1,234	14,371
(Provision for)/Benefit from income taxes	(2,881) (4) (2,425
Net income	7,371	1,230	11,946
Less: Income/(Loss) attributable to noncontrolling interests	(2) (1) (7
Net income attributable to Ford	\$7,373	\$1,231	\$11,953

Net income includes certain items ("special items") that we have grouped into "Pension and OPEB Remeasurements," "Personnel and Dealer-Related Items," and "Other Items" to provide useful information to investors about the nature of the special items. The first category includes pension and OPEB remeasurement gains and losses. These gains and losses, generally recognized in the fourth quarter, are not reflective of our underlying Automotive business results. The second category includes items related to our efforts to match production capacity and cost structure to market demand and changing model mix and therefore helps investors track amounts related to those activities. The third category includes items that we do not generally consider to be indicative of our ongoing operating activities, and therefore allows investors analyzing our pre-tax results to identify certain infrequent significant items that they may wish to exclude when considering the trend of ongoing operating results.

As detailed in Note 24 of the Notes to the Financial Statements, we allocate special items to a separate reconciling item, as opposed to allocating them among the operating segments and Other Automotive, reflecting the fact that management excludes these items from its review of operating segment results for purposes of measuring segment profitability and allocating resources among the segments.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

The following table details Automotive sector special items in each category:

	2015 (Mils.)	2014 (Mils.)	2013 (Mils.)
Pension and OPEB Remeasurements	\$(698)) \$(4,123) \$5,246
Personnel and Dealer-Related Items			
Separation-related actions (a)	—	(681) (852
Other Items			
Nemak IPO	150	—	—
Venezuela accounting change	—	(800) —
Ford Sollers equity impairment	—	(329) —
2016 Convertible Notes settlement	—	(126) —
FCTA -- subsidiary liquidation	—	—	(103
Ford Romania consolidation loss	—	—	(15
Total other items	150	(1,255) (118
Total Special Items	\$(548)) \$(6,059) \$4,276
Tax Special Items	\$205	\$1,905	\$116

(a) For 2014 and 2013, primarily related to separation costs for personnel at the Genk and U.K. facilities.

Our tax special items of \$205 million and \$1.9 billion in 2015 and 2014, respectively, primarily reflect the tax associated with our pre-tax special items. Our tax special item of \$116 million in 2013 reflects the tax associated with our pre-tax special items, offset by a favorable increase in deferred tax assets related to investments in our European operations and the release of valuation allowances held against U.S. state and local deferred tax assets.

The following table shows our earnings per share on a diluted basis for full year 2015:

	Net Income Attributable to Ford	Operating Results Excluding Special Items
After-Tax Results (Mils.)		
Diluted after-tax results	\$7,373	\$7,716
Basic and Diluted Shares (Mils.)		
Basic shares (average shares outstanding)	3,969	3,969
Net dilutive options	33	33
Diluted shares	\$4,002	\$4,002
Diluted Earnings Per Share	\$1.84	\$1.93

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Discussion of Automotive sector, Financial Services sector, and total Company results of operations below is on a pre-tax basis and excludes special items unless otherwise specifically noted. References to records by Automotive segments—North America, South America, Europe, Middle East & Africa, and Asia Pacific—are since at least 2000 when we began reporting specific business unit results.

Results by Segment. The chart below shows our 2015 Company pre-tax results by Automotive business unit, along with Other Automotive which is mainly net interest expense, and our Financial Services sector. We achieved a record Company full-year pre-tax profit of \$10.8 billion in 2015. Collectively, our operations outside of North America were profitable and every business unit, with the exception of South America, was profitable in 2015. In Europe, we earned \$259 million, reflecting the progress of our Transformation Plan announced in 2012. Asia Pacific had its best-ever annual profit. North America and Ford Credit continued to deliver benchmark profitability. And as shown below the chart, all business units improved compared to 2014.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

AUTOMOTIVE SECTOR

Definitions and calculations used in this report include:

Wholesales and Revenue – wholesale unit volumes include all Ford and Lincoln badged units (whether produced by Ford or by an unconsolidated affiliate) that are sold to dealerships, units manufactured by Ford that are sold to other manufacturers, units distributed by Ford for other manufacturers, and local brand units produced by our China joint venture, Jiangling Motors Corporation, Ltd. ("JMC"), that are sold to dealerships. Vehicles sold to daily rental car companies that are subject to a guaranteed repurchase option (i.e., rental repurchase), as well as other sales of finished vehicles for which the recognition of revenue is deferred (e.g., consignments), also are included in wholesale unit volumes. Revenue from certain vehicles in wholesale unit volumes (specifically, Ford badged vehicles produced and distributed by our unconsolidated affiliates, as well as JMC brand vehicles) are not included in our revenue

Automotive Operating Margin – defined as Automotive pre-tax results, excluding special items and Other Automotive, divided by Automotive revenue

Industry Volume and Market Share – based, in part, on estimated vehicle registrations; includes medium and heavy duty trucks. For periods prior to 2016, China industry volume and market share are based on estimated wholesales.

SAAR – seasonally adjusted annual rate

Automotive Cash – includes cash, cash equivalents, and marketable securities net of securities-in-transit.

In general, we measure year-over-year change in Automotive pre-tax operating profit for our total Automotive sector and reportable segments using the causal factors listed below, with net pricing and cost variances calculated at present-year volume and mix and exchange:

Market Factors:

Volume and Mix – primarily measures profit variance from changes in wholesale volumes (at prior-year average margin per unit) driven by changes in industry volume, market share, and dealer stocks, as well as the profit variance resulting from changes in product mix, including mix among vehicle lines and mix of trim levels and options within a vehicle line

Net Pricing – primarily measures profit variance driven by changes in wholesale prices to dealers and marketing incentive programs such as rebate programs, low-rate financing offers, and special lease offers

Contribution Costs – primarily measures profit variance driven by per-unit changes in cost categories that typically vary with volume, such as material costs (including commodity and component costs), warranty expense, and freight and duty costs

Structural Costs – primarily measures profit variance driven by absolute change in cost categories that typically do not have a directly proportionate relationship to production volume. Structural costs include the following cost categories:
Manufacturing, Including Volume Related – consists primarily of costs for hourly and salaried manufacturing personnel, plant overhead (such as utilities and taxes), and new product launch expense. These costs could be affected by volume for operating pattern actions such as overtime, line-speed, and shift schedules

Engineering – consists primarily of costs for engineering personnel, prototype materials, testing, and outside engineering services

Spending-Related – consists primarily of depreciation and amortization of our manufacturing and engineering assets, but also includes asset retirements and operating leases

Advertising and Sales Promotions – includes costs for advertising, marketing programs, brand promotions, customer mailings and promotional events, and auto shows

Administrative and Selling – includes primarily costs for salaried personnel and purchased services related to our staff activities and selling functions, as well as associated information technology costs

Pension and OPEB – consists primarily of past service pension costs and other postretirement employee benefit costs

Exchange – primarily measures profit variance driven by one or more of the following: (i) transactions denominated in currencies other than the functional currencies of the relevant entities, (ii) effects of converting functional currency income to U.S. dollars, (iii) effects of remeasuring monetary assets and liabilities of the relevant entities in currencies other than their functional currency, or (iv) results of our foreign currency hedging

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Net Interest and Other

Net Interest – primarily measures profit variance driven by changes in our Automotive sector's centrally-managed net interest, which consists of interest expense, interest income, fair market value adjustments on our cash equivalents and marketable securities portfolio (excluding strategic equity investments held in marketable securities), and other adjustments

Other – items not included in the causal factors defined above

2015 Compared with 2014

The charts on the following pages detail 2015 key metrics and the change in 2015 pre-tax results compared with 2014 by causal factor for our Automotive sector and its segments.

Shown above are the key market factors and financial metrics for our Automotive business for full year 2015. Our Automotive operating margin of 6.8 percent was the highest since at least the 1990s. Each of the key metrics improved compared to 2014:

- Wholesale volume was up 5%,
- Automotive revenue was up 4%, or 9% at constant exchange,
- Automotive operating margin was up 2.2 points or nearly 50%, and
- Record full year Automotive pre-tax profit, at \$8.8 billion, was up 60%.

Global industry volume, estimated at 89.5 million units, was up 1.4 million units from a year ago. Our global market share, at 7.3%, was up two-tenths of a percentage point with gains in South America and Europe.

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations (Continued)

As shown above, our full year Automotive pre-tax profit improved by \$3.3 billion. The improvement was driven by \$7.4 billion of favorable market factors, reflecting the success of our new product launches, our Asia Pacific growth strategy, as well as industry growth in North America and Europe. Cost increases were mainly product-related costs and manufacturing and engineering expense that supported our growth in 2015, and will support further growth in 2016 and beyond.

Total costs and expenses. For 2015 and 2014, total costs and expenses, including special items, for our Automotive sector were \$134.5 billion and \$136.8 billion, respectively, a difference of \$2.3 billion. The detail for the change is shown below (in billions):

	2015 Lower/(Higher) 2014
Volume and mix, exchange, and other	\$ 1.4
Contribution costs	
Material excluding commodities	(3.7)
Commodities	0.9
Warranty, freight, and other	1.4
Structural costs	(1.8)
Special items	4.1
Total	\$ 2.3

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

North America had an outstanding year, with each of North America's key metrics improving compared with a year ago. We delivered substantial top-line growth, operating margin at 10.2%, and full year pre-tax profit of \$9.3 billion—up 26%.

The North America industry volume improved compared with a year ago; the U.S. industry volume totaled 17.8 million units, up 1 million units. U.S. market share was flat compared to last year. In addition, although not shown above, U.S. retail share increased one-tenth of a percentage point to 13.0% driven by strong demand for our newest products, including F-150 and Mustang.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Favorable volume and mix and higher net pricing drove North America's pre-tax profit higher than a year ago. Higher costs, including a one-time ratification bonus in Other related to the UAW agreement in the fourth quarter, and unfavorable exchange were partial offsets.

With the 16 global product launches last year, we expect about 45% of our wholesales in 2016 to be from products that we launched since January 2015.

We achieved our highest annual sales in the United States since 2005. Ford remained the best-selling vehicle brand in the United States and Ford F-Series was the best-selling vehicle in the United States for the 34th straight year.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Wholesale volume, revenue, and operating margin were each lower than a year ago, reflecting the continued deterioration of the business environment in South America. Despite the tough conditions, South America's pre-tax loss for the full year was reduced by \$332 million, or 29%, compared to last year.

The South America industry volume, at 4.2 million units, was down 1.1 million units. Most of this was in Brazil. Ford's market share in South America, at 9.6%, was up seven-tenths of a percentage point reflecting our strong performance in Brazil with the all-new Ka.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

The full year pre-tax loss in South America was less severe than a year ago, reflecting higher net pricing and market share, partially offset by lower industry.

Our team in the region continues to work on all areas of the business to counter the effects of the difficult business environment and position ourselves to be able to recover quickly once conditions begin to improve.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

With the exception of revenue, which was impacted adversely by the strong U.S. dollar, all metrics for the full year were better than a year ago.

The Europe industry volume was 600,000 units higher compared to a year ago, more than explained by the improvement in the Europe 20 markets. Our total Europe market share in the region was up five-tenths of a percentage point to 7.7%, reflecting the strength of EcoSport and Mondeo and geographic mix.

In 2015, Ford became Europe's best-selling commercial vehicle brand, reflecting the strength of our renewed Transit line-up and Ranger as well as our dedicated dealer network support.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

In Europe, our full year pre-tax profit was \$259 million, up over \$850 million compared to a year ago. The improvement in Europe reflects favorable market factors and improved costs flowing through to the bottom line, partially offset by unfavorable exchange and the consolidation of Ford Sollers, our joint venture in Russia. Returning to profitability in 2015 reflected the progress of our Transformation Plan announced in 2012.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Our pre-tax results and operating margin improved from a year ago, reflecting higher net pricing offset by lower volume. Wholesale volume and revenue declined compared to a year ago.

The industry volume for the region was flat and our market share declined one-tenth of a percentage point due to industry growth in markets in which we do not participate. Market share was higher compared to 2014 in the major markets in which we do participate.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

In Asia Pacific, we had our best year yet as we continue to execute our growth strategy.

Asia Pacific achieved record volume, revenue, operating margin, and pre-tax profit in 2015, mainly reflecting the strength of our new products, including the all-new three-row Edge, Figo, Everest, Lincoln MKX, Taurus, and new Ranger.

Our China joint ventures contributed \$1.5 billion to pre-tax profit in 2015, reflecting our equity share of the unconsolidated joint ventures' after-tax earnings; this was \$234 million higher than last year.

The industry volume for the region was 40.5 million units, up 800,000 units from a year ago, more than explained by an increase in the China industry volume. For the full year, both our Asia Pacific regional market share of 3.5% and our China market share of 4.5% were the same as a year ago.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Asia Pacific delivered an outstanding year with a record pre-tax profit of \$765 million, up 29% from a year ago. Favorable volume was driven by strong industry in China, where we were able to leverage the government incentive program with our strong line-up of vehicles with 1.6L or smaller engines. Higher mix reflected the strength of our new products, highlighted by the performance of the locally produced all-new three-row Edge. Higher structural cost was a partial offset to the improvement, as we continue to invest for further growth in the region.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

2014 Compared with 2013

The charts on the following pages detail 2014 key metrics and the change in 2014 pre-tax results compared with 2013 by causal factor for our Automotive sector and its operating segments—North America, South America, Europe, Middle East & Africa, and Asia Pacific.

As shown above, full-year wholesale volume was about equal to 2013. Automotive sector revenue was lower than in 2013 by 3%, more than explained by lower volume from consolidated operations and unfavorable exchange. Operating margin, at 4.6%, and pre-tax profit, at \$5.5 billion, were also lower.

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Lower pre-tax profit was driven by the Americas; all other business units improved. Higher costs, including warranty, unfavorable exchange, and lower volume, including product launch effects and supplier parts shortages, more than explain the decline. Higher net pricing was a partial offset.

Total costs and expenses. For 2014 and 2013, total costs and expenses, including special items, for our Automotive sector were \$136.9 billion and \$127.9 billion, respectively, a difference of \$9 billion. The detail for the change is shown below (in billions):

	2014 Lower/(Higher) 2013
Volume and mix, exchange, and other	\$ 2.9
Contribution costs	
Material/Freight	0.8
Warranty	(1.3)
Other costs	
Structural costs	(2.1)
Other	(0.1)
Special items	(9.2)
Total	\$ (9.0)

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

In 2014, Automotive pre-tax profit was driven by profits in North America and record results in Asia Pacific. Middle East & Africa was about breakeven, while Europe and South America incurred large losses as expected. Other Automotive primarily reflects net interest expense.

51

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

As shown above, North America's full-year wholesale volume and revenue both declined 5% compared with 2013. Operating margin was 9.0%, 2.4 percentage points lower than in 2013, while pre-tax profit was \$7.4 billion, down \$2.4 billion.

For the full year, total U.S. market share was down 1 percentage point, primarily reflecting lower F-150 share as we prepared for the all-new vehicle by balancing share with transaction prices and stocks, as well as a planned reduction in daily rental sales. U.S. retail share of retail industry was down 0.6 percentage points.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

The decrease in pre-tax profit for 2014 compared with 2013 is more than explained by lower volume and higher costs, including warranty.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

As shown above, full-year wholesale volume and revenue deteriorated compared with 2013 by 14% and 19%, respectively. Operating margin was negative 13.2%, and the pre-tax loss was \$1.2 billion, both deteriorated compared with 2013. The deterioration in all metrics was driven by unfavorable changes in the external factors mentioned above.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

The decrease in pre-tax profit for 2014 compared with 2013 is more than explained by unfavorable exchange, higher costs (primarily driven by higher inflation), and lower volume, offset partially by favorable net pricing. The higher net pricing reflects partial recovery of the adverse effects of high local inflation and weaker local currencies, along with pricing associated with our new products. The full year loss includes \$426 million of adverse balance sheet exchange effects, related primarily to the devaluation of the Venezuela bolivar in the first quarter.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Europe's full-year wholesale volume and revenue were up 5% and 8%, respectively, compared with 2013. Operating margin was negative 2.0% and the pre-tax loss was \$0.6 billion, both improved from 2013.

Europe 20 full-year market share, at 7.9%, was up 0.1 percentage points, more than explained by a 1.4 percentage point improvement in our commercial vehicle share, to 11.4%, reflecting the success of our full line of new Transit vehicles and continued strong performance of the Ranger compact pick-up. For the year, Europe retail share of the retail passenger car industry for the five major markets was 8.2%, unchanged from 2013.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

The improvement in pre-tax results is more than explained by higher volume and lower cost, offset partially by Russia and other factors, including lower component pricing and parts and accessories profits.

57

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Middle East & Africa's full-year wholesale volume and revenue were down 4% and 3%, respectively, compared with 2013. Operating margin was negative 0.5% and the pre-tax loss was \$20 million, both improved from 2013. The improvement in pre-tax results is more than explained by higher net pricing and favorable mix.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

As shown above, all full year metrics improved from 2013 and all were records. Wholesale volume improved 13% compared with 2013, while revenue, which excludes our China joint ventures, improved 5%. Our wholesale volume in China, not shown, was up 19%. Operating margin was 5.5%, up 2.3 percentage points, and pre-tax profit was \$593 million, up \$262 million.

As shown in the memo, our China joint ventures contributed \$1.3 billion to pre-tax profit in 2014, reflecting our equity share of earnings after tax. The balance of results for the region primarily reflect Australia where we have been implementing our transformation plan; India where we have been investing for future growth, including the launch of two plants in 2014; and industry and economic factors in ASEAN.

Our market share in the region was a record 3.5% for the full year, up by 0.2 percentage points compared with 2013. The improvement was driven by China, where our market share for the full year rose to a record 4.5%, up by 0.4 percentage points compared with 2013, reflecting continued strong sales across our vehicle line-up.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

The improvement in 2014 pre-tax results primarily reflects favorable market factors, offset partially by higher costs, including investments to support future growth, and unfavorable exchange.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

FINANCIAL SERVICES SECTOR

Ford Credit has two operations, North America and International. In general, we measure year-over-year changes in Ford Credit's pre-tax results using the causal factors listed below:

•Volume and Mix:

Volume primarily measures changes in net financing margin driven by changes in average finance receivables and net investment in operating leases at prior period financing margin yield (defined below in financing margin) at prior period exchange rates. Volume changes are primarily driven by the volume of new and used vehicle sales and leases, the extent to which Ford Credit purchases retail installment sale and lease contracts, the extent to which Ford Credit provides wholesale financing, the sales price of the vehicles financed, the level of dealer inventories, Ford-sponsored special financing programs available exclusively through Ford Credit, and the availability of cost-effective funding for the purchase of retail installment sale and lease contracts and to provide wholesale financing.

Mix primarily measures changes in net financing margin driven by period over period changes in the composition of Ford Credit's average managed receivables by product and by country or region.

•Financing Margin:

Financing margin variance is the period-to-period change in financing margin yield multiplied by the present period average receivables at prior period exchange rates. This calculation is performed at the product and country level and then aggregated. Financing margin yield equals revenue, less interest expense and scheduled depreciation for the period, divided by average receivables for the same period.

Financing margin changes are driven by changes in revenue and interest expense. Changes in revenue are primarily driven by the level of market interest rates, cost assumptions in pricing, mix of business, and competitive environment. Changes in interest expense are primarily driven by the level of market interest rates, borrowing spreads, and asset-liability management.

•Credit Loss:

Credit loss is the change in the provision for credit losses at prior period exchange rates. For analysis purposes, management splits the provision for credit losses primarily into net charge-offs and the change in the allowance for credit losses.

Net charge-off changes are primarily driven by the number of repossessions, severity per repossession, and recoveries. Changes in the allowance for credit losses are primarily driven by changes in historical trends in credit losses and recoveries, changes in the composition and size of Ford Credit's present portfolio, changes in trends in historical used vehicle values, and changes in economic conditions. For additional information on the allowance for credit losses, refer to the "Critical Accounting Estimates - Allowance for Credit Losses" section below.

•Lease Residual:

Lease residual measures changes to residual performance at prior period exchange rates. For analysis purposes, management splits residual performance primarily into residual gains and losses, and the change in accumulated supplemental depreciation.

Residual gain and loss changes are primarily driven by the number of vehicles returned to Ford Credit and sold, and the difference between the auction value and the depreciated value of the vehicles sold. Changes in accumulated supplemental depreciation are primarily driven by changes in Ford Credit's estimate of the number of vehicles that will be returned to it and sold, and changes in the estimate of the expected auction value at the end of the lease term. For additional information on accumulated supplemental depreciation, refer to the "Critical Accounting Estimates - Accumulated Depreciation on Vehicles Subject to Operating Leases" section below.

•Exchange:

Reflects changes in pre-tax results driven by the effects of converting functional currency income to U.S. dollars.

Other:

Primarily includes operating expenses, other revenue, and insurance expenses at prior period exchange rates.

Changes in operating expenses are primarily driven by salaried personnel costs, facilities costs, and costs associated with the origination and servicing of customer contracts.

In general, other revenue changes are primarily driven by changes in earnings related to market valuation adjustments to derivatives (primarily related to movements in interest rates), and other miscellaneous items.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

2015 Compared with 2014

Ford Credit. The chart below details the key metrics for Ford Credit for full year 2015.

Ford Credit had another outstanding year with pre-tax profit of \$2.1 billion, up \$232 million from 2014.

Ford Credit continues to support our growth with contract volume up 8% in 2015 and year-end managed receivables of \$127 billion, up \$14 billion from 2014.

Managed receivables equal net finance receivables of \$96.8 billion and \$86.9 billion and net investment in operating leases of \$25.1 billion and \$21.5 billion reported on Ford Credit's balance sheet at December 31, 2015 and 2014, respectively, excluding unearned interest supplements and residual support of \$4.5 billion and \$3.9 billion, allowance for credit losses of \$0.4 billion and \$0.4 billion, and other (primarily accumulated supplemental depreciation) of \$0.4 billion and \$0.1 billion at December 31, 2015 and 2014, respectively.

Ford Credit's purchase policy remains consistent along with a relentless focus on originations, servicing, and collections. As a result, its portfolio performance continues to be robust with the loss-to-receivables ratio at the low end of Ford Credit's historical experience.

Ford Credit is a strategic asset, supporting Ford's sales around the world with a strong balance sheet and outstanding operating performance.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

The chart below details the change in 2015 pre-tax results compared with 2014 by causal factor for Ford Credit. Ford Credit's 2015 pre-tax profit improved compared with 2014. The improvement is more than explained by favorable volume and mix, driven by growth in all products globally. Higher credit losses and the adverse effect of the stronger U.S. dollar were partial offsets. The higher credit losses, primarily in North America, reflect reserve increases in 2015 compared with reserve releases in 2014. Charge-offs were also higher.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

2014 Compared with 2013

Ford Credit. The chart below details the change in 2014 pre-tax results compared with 2013 by causal factor.

The improvement of \$98 million in pre-tax profit in 2014 compared with 2013 is more than explained by favorable volume and mix, driven by increases in consumer and non-consumer finance receivables globally, as well as an increase in operating leases in North America.

Partial offsets include lower financing margin, reflecting primarily lower portfolio pricing in North America and a one-time reserve in Europe, and unfavorable lease residual performance in North America, resulting from lower relative auction values.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

LIQUIDITY AND CAPITAL RESOURCES

Automotive Sector

Our Automotive liquidity strategy includes ensuring that we have sufficient liquidity available with a high degree of certainty throughout the business cycle by generating cash from operations and maintaining access to other sources of funding. We target to have an average ongoing Automotive cash balance of about \$20 billion. We expect to have periods when we will be above or below this amount due to (i) future cash flow expectations such as for pension contributions, debt maturities, capital investments, or restructuring requirements, (ii) short-term timing differences, and (iii) changes in the global economic environment. In addition, we also target to maintain a revolving credit facility for our Automotive business of about \$10 billion to protect against exogenous shocks. Our revolving credit facility is discussed below.

We assess the appropriate long-term target for total Automotive liquidity, comprised of Automotive cash and the revolving credit facility, to be about \$30 billion, which is an amount we believe is sufficient to support our business priorities and to protect our business. Our Automotive cash and Automotive liquidity targets could be reduced over time based on improved operating performance and changes in our risk profile.

For a discussion of risks to our liquidity, see "Item 1A. Risk Factors," as well as Note 27 of the Notes to the Financial Statements, regarding commitments and contingencies that could impact our liquidity.

Our key liquidity metrics are Automotive cash, Automotive liquidity, and operating-related cash flow (which best represents the ability of our Automotive operations to generate cash).

Automotive cash is detailed below as of the dates shown (in billions):

	December 31, 2015	December 31, 2014	December 31, 2013
Cash and cash equivalents	\$5.4	\$4.6	\$5.0
Marketable securities	18.2	17.1	20.1
Total cash and marketable securities	23.6	21.7	25.1
Securities-in-transit (a)	—	—	(0.3)
Automotive cash	\$23.6	\$21.7	\$24.8

(a) The purchase or sale of marketable securities for which the cash settlement was not made by period-end and a payable or receivable was recorded on the balance sheet.

Our cash, cash equivalents, and marketable securities are held primarily in highly liquid investments, which provide for anticipated and unanticipated cash needs. Our cash, cash equivalents, and marketable securities primarily include U.S. Department of Treasury obligations, federal agency securities, bank time deposits with investment-grade institutions, corporate investment-grade securities, commercial paper rated A-1/P-1 or higher, and debt obligations of a select group of non-U.S. governments, non-U.S. governmental agencies, and supranational institutions. The average maturity of these investments ranges from about 90 days to up to about one year, and is adjusted based on market conditions and liquidity needs. We monitor our cash levels and average maturity on a daily basis. Of our total Automotive cash at December 31, 2015, consolidated entities domiciled in the United States held 84%.

Automotive cash and liquidity as of the dates shown were as follows (in billions):

	December 31, 2015	December 31, 2014	December 31, 2013
Automotive cash	\$23.6	\$21.7	\$24.8
Available credit lines			

Edgar Filing: FORD MOTOR CO - Form 10-K

Revolving credit facility, unutilized portion	10.3	10.1	10.7
Local lines available to foreign affiliates, unutilized portion	0.6	0.6	0.7
Automotive liquidity	\$34.5	\$32.4	\$36.2

In managing our business, we classify changes in Automotive cash into operating-related and other items (which includes the impact of certain special items, contributions to funded pension plans, certain tax-related transactions, acquisitions and divestitures, capital transactions with the Financial Services sector, dividends paid to shareholders, and other—primarily financing-related).

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

We believe the cash flow analysis reflected in the table below is useful to investors because it includes in operating-related cash flow elements that we consider to be related to our Automotive operating activities (e.g., capital spending) and excludes cash flow elements that we do not consider to be related to the ability of our operations to generate cash. This differs from a cash flow statement prepared in accordance with generally accepted accounting principles in the United States ("GAAP") and differs from Net cash provided by/(used in) operating activities, the most directly comparable GAAP financial measure.

Changes in Automotive cash are summarized below (in billions):

	2015	2014	2013
Automotive cash at end of period	\$23.6	\$21.7	\$24.8
Automotive cash at beginning of period	21.7	24.8	24.3
Change in Automotive cash	\$1.9	\$(3.1)	\$0.5
Automotive pre-tax profits (excluding special items)	\$8.8	\$5.5	\$8.4
Capital spending	(7.1)	(7.4)	(6.6)
Depreciation and tooling amortization	4.3	4.3	4.1
Changes in working capital (a)	0.6	(0.4)	(0.3)
Other/Timing differences (b)	0.7	1.6	0.5
Automotive operating-related cash flows	7.3	3.6	6.1
Separation payments	(0.6)	(0.2)	(0.3)
Net receipts from Financial Services sector (c)	0.2	0.6	0.4
Other (d)	(0.6)	(0.8)	0.4
Cash flow before other actions	6.3	3.2	6.6
Changes in debt	(0.8)	(0.9)	0.7
Funded pension contributions	(1.1)	(1.5)	(5.0)
Dividends/Other items (e)	(2.5)	(3.9)	(1.8)
Change in cash	\$1.9	\$(3.1)	\$0.5

(a) Working capital is comprised of changes in receivables, inventory, and trade payables.

Primarily expense and payment timing differences for items such as pension and OPEB, compensation, marketing,

(b) warranty, and timing differences between unconsolidated affiliate profits and dividends received. Also includes other factors, such as the impact of tax payments and vehicle financing activities between Automotive and Financial Services sectors.

(c) Primarily distributions from Ford Holdings (Ford Credit's parent) and tax payments received from Ford Credit.

(d) 2014 includes one-time unfavorable cash effect associated with the accounting change for our operations in Venezuela.

(e) In 2014, we used \$2 billion in cash to settle repurchases of approximately 116 million shares of Ford Common Stock.

With respect to "Changes in working capital," in general we carry relatively low Automotive sector trade receivables compared with our trade payables because the majority of our Automotive wholesales are financed (primarily by Ford Credit) immediately upon sale of vehicles to dealers, which generally occurs at the time the vehicles are gate-released shortly after being produced. In addition, our inventories are lean because we build to order, not for inventory. In contrast, our Automotive trade payables are based primarily on industry-standard production supplier payment terms generally ranging between 30 days to 45 days. As a result, our cash flow tends to improve as wholesale volumes increase, but can deteriorate significantly when wholesale volumes drop sharply. These working capital balances generally are subject to seasonal changes that can impact cash flow. For example, we typically experience cash flow

timing differences associated with inventories and payables due to our annual summer and December shutdown periods, when production, and therefore inventories and wholesale volumes, are usually at their lowest levels, while payables continue to come due and be paid. The net impact of this typically results in cash outflows from changes in our working capital balances during these shutdown periods.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Shown below is a reconciliation between financial statement Net cash provided by/(used in) operating activities and operating-related cash flows (calculated as shown in the table above), as of the dates shown (in billions):

	2015	2014	2013
Net cash provided by/(used in) operating activities	\$12.3	\$8.8	\$7.7
Items included in operating-related cash flows			
Capital spending	(7.1)	(7.4)	(6.6)
Proceeds from the exercise of stock options	0.2	0.2	0.3
Net cash flows from non-designated derivatives	(0.1)	0.2	(0.3)
Items not included in operating-related cash flows			
Separation payments	0.6	0.2	0.3
Funded pension contributions	1.1	1.5	5.0
Tax refunds, tax payments, and tax receipts from affiliates	—	(0.2)	(0.3)
Other	0.3	0.3	—
Operating-related cash flows	\$7.3	\$3.6	\$6.1

Credit Agreement. Lenders under our Third Amended and Restated Credit Agreement dated as of April 30, 2015 and as further amended (the "revolving credit facility") have commitments to us totaling \$13.4 billion, with 75% of the commitments maturing on April 30, 2020 and 25% of the commitments maturing on April 30, 2018. We have allocated \$3 billion of commitments to Ford Credit on an irrevocable and exclusive basis to support its growth and liquidity. Any borrowings by Ford Credit under the revolving credit facility would be guaranteed by us.

The revolving credit facility is unsecured and free of material adverse change conditions to borrowing, restrictive financial covenants (for example, interest or fixed charge coverage ratio, debt-to-equity ratio, and minimum net worth requirements), and credit rating triggers that could limit our ability to obtain funding. The revolving credit facility contains a liquidity covenant that requires us to maintain a minimum of \$4 billion in aggregate of domestic cash, cash equivalents, and loaned and marketable securities and/or availability under the revolving credit facility. If our senior, unsecured, long-term debt does not maintain at least two investment grade ratings from Fitch, Moody's, and S&P (each as defined under "Total Company" below), the guarantees of certain subsidiaries will be required.

At December 31, 2015, the utilized portion of the revolving credit facility was \$48 million, representing amounts utilized as letters of credit.

U.S. Department of Energy ("DOE") Advanced Technology Vehicle Manufacturer ("ATVM") Incentive Program. See Note 13 of the Notes to the Financial Statements for information regarding the ATVM loan.

Other Automotive Credit Facilities. At December 31, 2015, we had \$1.5 billion of local credit facilities available to non-U.S. Automotive affiliates, of which \$836 million had been utilized.

Net Cash. Our Automotive sector net cash calculation as of the dates shown was as follows (in billions):

	December 31, 2015	December 31, 2014	December 31, 2013
Automotive cash	\$23.6	\$21.7	\$24.8
Less:			
Long-term debt	11.0	11.3	14.4
Debt payable within one year	1.8	2.5	1.3
Total debt	12.8	13.8	15.7
Net cash	\$10.8	\$7.9	\$9.1

Total debt at December 31, 2015 was \$1 billion lower than at December 31, 2014. The reduction primarily represents debt repayments, offset partially by the addition of the external debt of Ford Sollers, our joint venture in Russia, as a result of the consolidation of the joint venture on March 31, 2015, and higher local funding in Brazil.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Pension Plan Contributions and Strategy. Worldwide, our defined benefit pension plans were underfunded by \$8.2 billion at December 31, 2015, an improvement of \$1.6 billion from December 31, 2014, due to higher discount rates and favorable exchange partially offset by asset returns in the United States. The U.S. weighted-average discount rate increased 33 basis points to 4.27% at year-end 2015 from 3.94% at year-end 2014. The non-U.S. weighted average discount rate increased 14 basis points to 3.20% at year-end 2015 from 3.06% at year-end 2014. Of the \$8.2 billion underfunded status at year-end 2015, \$5.7 billion, or about 70%, is associated with our unfunded plans.

Our strategy is to reduce the risk of our funded defined benefit pension plans, including minimizing the volatility of the value of our pension assets relative to pension liabilities and the need for unplanned use of capital resources to fund the plans. The strategy reduces balance sheet, cash flow, and income exposures and, in turn, reduces our risk profile. The key elements of this strategy include:

- ¶ Limiting liability growth in our defined benefit plans by closing participation to new participants;
- ¶ Reducing plan deficits through discretionary cash contributions;
- ¶ Progressively re-balancing assets to more fixed income investments, with a target asset allocation of about 80% fixed income investments and 20% growth assets, which will provide a better matching of plan assets to the characteristics of the liabilities, thereby reducing our net exposure; and
- ¶ Taking other strategic actions to reduce pension liabilities.

On December 31, 2015, we adopted a change in accounting method for our defined benefit pension and OPEB plans. Ford will recognize pension and OPEB remeasurement gains and losses in the year incurred (generally in the fourth quarter) rather than amortizing them over many years. The remeasurement will be reported as a special item since it is not reflective of the underlying operating results of our automotive business. The change in accounting method will have no effect on our funding requirements, cash flows, or employees' pension or OPEB benefits. See Note 1 of the Notes to the Financial Statements for additional information on the change in accounting.

In 2015, consistent with our plan, we contributed \$1.1 billion to our global funded pension plans (most of which were mandatory contributions), a decrease of \$0.4 billion compared with 2014. During 2016, we expect to contribute \$1.5 billion from Automotive cash to our global funded pension plans (including discretionary contributions of about \$400 million). We also expect to make about \$300 million of benefit payments to participants in unfunded plans, for a combined total of \$1.8 billion. Based on current assumptions and regulations, we do not expect to have a legal requirement to fund our major U.S. plans in 2016. After 2016, we expect contributions to our global funded plans to be limited to ongoing service cost of about \$500 to \$700 million per year.

Asset returns in 2015 for our U.S. plans were (1.8)% reflecting fixed income losses as interest rates rose, partially offset by positive growth asset returns. The fixed income mix in our U.S. plans at year-end 2015 was 77%, unchanged from year-end 2014. Asset returns for our non-U.S. plans were 7.7%, reflecting fixed income gains, strongly positive growth asset returns, and favorable exchange. The fixed income mix in our non-U.S. plans at year-end 2015 was 73%, 6 percentage points higher than year-end 2014.

For a detailed discussion of our pension plans, see Note 12 of the Notes to the Financial Statements.

Leverage. We manage Automotive debt levels with a leverage framework to maintain strong, investment grade credit ratings through a normal business cycle. The leverage framework includes a ratio of Automotive debt, underfunded pension liabilities, operating leases, and other adjustments, divided by Automotive income before income tax, adjusted for depreciation, amortization, Automotive interest, and other adjustments. Ford Credit's leverage is calculated as a separate business as described in the Liquidity - Financial Services section of Item 7. Ford Credit is self-funding and its debt, which is used to fund its operations, is separate from our Automotive debt.

Liquidity Sufficiency. One of the four key priorities of our One Ford plan is to finance our plan and maintain a strong balance sheet, while at the same time having resources available to grow our business. Based on our planning assumptions, we believe that we have sufficient liquidity and capital resources to continue to invest in new products and services that customers want and value, transform and grow our business, pay our debts and obligations as and when they come due, pay a sustainable dividend, and provide protection within an uncertain global economic environment.

Based on expected cash flows and the identification of additional opportunities for profitable growth, the ongoing amount of capital spending to support product development, growth, restructuring, and infrastructure is expected to increase to about \$9 billion annually by 2020. Our capital spending was \$7.1 billion and \$7.4 billion in 2015 and 2014, respectively, and is expected to be about \$7.7 billion in 2016.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Financial Services Sector

Ford Credit

Funding Overview. Ford Credit's primary funding and liquidity objective is to maintain a strong investment grade balance sheet with adequate liquidity to support its financing activities and growth under a variety of market conditions, including short-term and long-term market disruptions.

Ford Credit's funding strategy remains focused on diversification, and it plans to continue accessing a variety of markets, channels, and investors.

Ford Credit's liquidity profile continues to be diverse, robust, and focused on maintaining liquidity levels that meet its business and funding requirements. Ford Credit regularly stress tests its balance sheet and liquidity to ensure that it continues to meet its financial obligations through economic cycles.

Funding Sources. Ford Credit's funding sources include primarily unsecured debt and securitization transactions (including other structured financings). Ford Credit issues both short-term and long-term debt that is held by both institutional and retail investors, with long-term debt having an original maturity of more than 12 months. Ford Credit sponsors a number of securitization programs that can be structured to provide both short-term and long-term funding through institutional investors in the United States and international capital markets.

Ford Credit obtains short-term unsecured funding from the sale of floating rate demand notes under its Ford Interest Advantage program and by issuing unsecured commercial paper in the United States and other international markets. At December 31, 2015, the principal amount outstanding of Ford Interest Advantage notes, which may be redeemed at any time at the option of the holders thereof without restriction, was \$5.9 billion. At December 31, 2015, the principal amount outstanding of Ford Credit's unsecured commercial paper was \$1.7 billion, which primarily represents issuance under its commercial paper program in the United States. Ford Credit maintains multiple sources of readily available liquidity to fund the payment of its unsecured short-term debt obligations.

Public Term Funding Plan. The following table shows Ford Credit's planned issuances for full-year 2016, and its global public term funding issuances in 2015, 2014, and 2013 (in billions), excluding short-term funding programs:

	Public Term Funding Plan			
	2016 Forecast	2015	2014	2013
Unsecured	\$ 14-18	\$17	\$13	\$11
Securitized (a)	12-15	13	15	14
Total	\$ 26-33	\$30	\$28	\$25

(a) Includes Rule 144A offerings.

In 2015, Ford Credit completed \$30 billion of public term funding in the United States, Canada, Europe, Mexico, China, and Australia including \$17 billion of unsecured debt and \$13 billion of securitizations.

For 2016, Ford Credit projects full-year public term funding in the range of \$26 billion to \$33 billion, consisting of \$14 billion to \$18 billion of unsecured debt and \$12 billion to \$15 billion of public securitizations.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Funding Portfolio. The chart below shows the trends in funding for Ford Credit's managed receivables:

At year-end 2015, managed receivables were \$127 billion, and Ford Credit ended the year with \$11 billion in cash. Securitized funding was 39% of managed receivables.

Ford Credit is projecting 2016 year-end managed receivables of \$134 billion to \$139 billion and securitized funding as a percent of managed receivables to be between 37% and 40%. Ford Credit expects this percentage to decline over time; quarterly and annual movements reflect the calendarization of Ford Credit's funding plan.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Liquidity. The following table shows Ford Credit's liquidity sources and utilization (in billions):

	December 31, 2015	December 31, 2014	December 31, 2013
Liquidity Sources			
Cash (a)	\$11.2	\$8.9	\$10.8
Committed ABS facilities (b)	33.2	33.7	29.4
FCAR bank lines	—	—	3.5
FCE/Other unsecured credit facilities	2.3	1.6	1.6
Ford revolving credit facility allocation	3.0	2.0	—
Total liquidity sources	\$49.7	\$46.2	\$45.3
Utilization of Liquidity			
Securitization cash (c)	\$(4.3)	\$(2.4)	\$(4.4)
Committed ABS facilities	(20.6)	(15.3)	(14.7)
FCAR bank lines	—	—	(3.3)
FCE/Other unsecured credit facilities	(0.8)	(0.4)	(0.4)
Ford revolving credit facility allocation	—	—	—
Total utilization of liquidity	(25.7)	(18.1)	(22.8)
Gross liquidity	24.0	28.1	22.5
Adjustments (d)	(0.5)	(1.6)	(1.1)
Net liquidity available for use	\$23.5	\$26.5	\$21.4

(a) Cash, cash equivalents, and marketable securities (excludes marketable securities related to insurance activities).

Committed asset-backed security ("ABS") facilities are subject to availability of sufficient assets, ability to obtain

(b) derivatives to manage interest rate risk, and exclude FCE Bank plc ("FCE") access to the Bank of England's Discount Window Facility.

(c) Used only to support on-balance sheet securitization transactions.

(d) Adjustments include other committed ABS facilities in excess of eligible receivables and certain cash within FordREV available through future sales of receivables.

At December 31, 2015, Ford Credit had total liquidity sources of \$49.7 billion compared with total liquidity sources of \$46.2 billion at December 31, 2014. Its liquidity sources of committed capacity and cash are diversified across a variety of markets and platforms. The utilization of its liquidity totaled \$25.7 billion at year-end 2015, compared with \$18.1 billion at year-end 2014. The increase of \$7.6 billion reflects higher securitization cash and usage of its committed ABS facilities.

Ford Credit ended 2015 with gross liquidity of \$24 billion. After adjustments totaling \$0.5 billion, total liquidity available for use continues to remain strong at \$23.5 billion at year-end 2015, \$3 billion lower than year-end 2014.

Leverage. Ford Credit uses leverage, or the debt-to-equity ratio, to make various business decisions, including evaluating and establishing pricing for finance receivable and operating lease financing, and assessing its capital structure. Ford Credit refers to its shareholder's interest as equity.

The following table shows the calculation of Ford Credit's financial statement leverage (in billions, except for ratios):

	December 31, 2015	December 31, 2014	December 31, 2013
Total debt (a)	\$119.6	\$105.0	\$98.7
Equity	11.7	11.4	10.6
Financial statement leverage (to 1)	10.2	9.2	9.3

(a) Includes debt issued in securitization transactions and payable only out of collections on the underlying securitized assets and related enhancements. Ford Credit holds the right to receive the excess cash flows not needed to pay the debt issued by, and other obligations of, the securitization entities that are parties to those securitization transactions.

71

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

The following table shows the calculation of Ford Credit's managed leverage (in billions, except for ratios):

	December 31, 2015	December 31, 2014	December 31, 2013
Total debt (a)	\$119.6	\$105.0	\$98.7
Adjustments for cash (b)	(11.2)	(8.9)	(10.8)
Adjustments for derivative accounting (c)	(0.5)	(0.4)	(0.2)
Total adjusted debt	\$107.9	\$95.7	\$87.7
Equity	\$11.7	\$11.4	\$10.6
Adjustments for derivative accounting (c)	(0.3)	(0.4)	(0.3)
Total adjusted equity	\$11.4	\$11.0	\$10.3
Managed leverage (to 1) (d)	9.5	8.7	8.5

(a) Includes debt issued in securitization transactions and payable only out of collections on the underlying securitized assets and related enhancements. Ford Credit holds the right to receive the excess cash flows not needed to pay the debt issued by, and other obligations of, the securitization entities that are parties to those securitization transactions.

(b) Cash, cash equivalents, and marketable securities (excludes marketable securities related to insurance activities).

(c) Primarily related to market valuation adjustments to derivatives due to movements in interest rates. Adjustments to debt are related to designated fair value hedges and adjustments to equity are related to retained earnings.

(d) Equals total adjusted debt over total adjusted equity.

Ford Credit believes that managed leverage is useful to its investors because it reflects the way Ford Credit manages its business. Ford Credit deducts cash, cash equivalents, and marketable securities (excluding marketable securities related to insurance activities) because they generally correspond to excess debt beyond the amount required to support its operations and amounts to support on-balance sheet securitization transactions. Ford Credit makes derivative accounting adjustments to its assets, debt, and equity positions to reflect the impact of interest rate instruments Ford Credit uses in connection with its term-debt issuances and securitization transactions. The derivative accounting adjustments related to these instruments vary over the term of the underlying debt and securitized funding obligations based on changes in market interest rates. Ford Credit generally repays its debt obligations as they mature. As a result, Ford Credit excludes the impact of these derivative accounting adjustments on both the numerator and denominator in order to exclude the interim effects of changes in market interest rates.

Ford Credit plans its managed leverage by considering prevailing market conditions and the risk characteristics of its business. At December 31, 2015, Ford Credit's managed leverage was 9.5:1, compared with 8.7:1 at December 31, 2014, reflecting the strength of the U.S. dollar and year-end receivables at the top end of the forecasted range. In 2016, Ford Credit expects managed leverage to return to the upper-end of the targeted range of 8:1 to 9:1. In 2015, Ford Credit paid \$250 million in distributions to its parent, Ford Holdings LLC.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Total Company

Equity. At December 31, 2015, Total equity was \$28.7 billion, an increase of \$4.2 billion compared with December 31, 2014. The increase primarily reflects favorable changes in Retained earnings of \$5 billion related to full-year 2015 Net income attributable to Ford Motor Company of \$7.4 billion, net of cash dividends declared of \$2.4 billion; favorable changes in Capital in excess of par value of stock related to compensation-related equity issuances of \$332 million; offset partially by unfavorable changes in Accumulated other comprehensive income/(loss) of about \$1 billion (more than explained by unfavorable foreign currency translation adjustments) and an increase in Treasury stock of \$129 million.

Credit Ratings. Our short-term and long-term debt is rated by four credit rating agencies designated as nationally recognized statistical rating organizations ("NRSROs") by the U.S. Securities and Exchange Commission:

- DBRS Limited ("DBRS");
- Fitch, Inc. ("Fitch");
- Moody's Investors Service, Inc. ("Moody's"); and
- Standard & Poor's Ratings Services, a division of McGraw Hill Financial ("S&P").

In several markets, locally-recognized rating agencies also rate us. A credit rating reflects an assessment by the rating agency of the credit risk associated with a corporate entity or particular securities issued by that entity. Rating agencies' ratings of us are based on information provided by us and other sources. Credit ratings are not recommendations to buy, sell, or hold securities, and are subject to revision or withdrawal at any time by the assigning rating agency. Each rating agency may have different criteria for evaluating company risk and, therefore, ratings should be evaluated independently for each rating agency.

The following rating actions were taken by these NRSROs since the filing of our Quarterly Report on Form 10-Q for the quarter ended September 30, 2015:

- On November 23, 2015, S&P affirmed its ratings for Ford and Ford Credit, and revised the outlook to positive from stable.

The following chart summarizes certain of the credit ratings and outlook presently assigned by these four NRSROs:

	NRSRO RATINGS						NRSROs Minimum Long-Term Investment Grade Rating
	Ford Issuer Default / Corporate / Issuer Rating	Long-Term Senior Unsecured	Outlook / Trend	Ford Credit Long-Term Senior Unsecured	Short-Term Unsecured	Outlook / Trend	
DBRS	BBB (low)	BBB (low)	Positive	BBB (low)	R-3	Positive	BBB (low)
Fitch	BBB-	BBB-	Positive	BBB-	F3	Positive	BBB-
Moody's	N/A	Baa3	Stable	Baa3	P-3	Stable	Baa3
S&P *	BBB-	BBB-	Positive	BBB-	A-3	Positive	BBB-

* S&P assigns FCE a long-term senior unsecured credit rating of BBB, a one-notch higher rating than Ford and Ford Credit, with a stable outlook.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Return on Invested Capital. We analyze total company performance using a Return on Invested Capital ("ROIC") financial metric based on an after-tax rolling five-year average basis, which we believe is appropriate given our industry's product and investment cycles. The following table contains the calculation of our five-year average ROIC for the years shown:

74

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

2015 PLANNING ASSUMPTIONS AND KEY METRICS

The following summarizes results against planning assumptions and key metrics established at the beginning of 2015:

	2014 Full Year Results	2015 Full Year Plan	Results
Planning Assumptions (Mils.)			
Industry Volume -- U.S.	16.8	17.0 - 17.5	17.8
-- Europe 20	14.6	14.8 - 15.3	16.0
-- China (a)	24.0	24.5 - 26.5	25.1
Key Metrics			
Automotive (Compared with 2014):			
- Revenue (Bils.)	\$135.8	Higher	\$140.6
- Operating Margin	4.6	% Higher	6.8 %
- Operating-Related Cash Flow (Bils.) (b)	\$3.6	Higher	\$7.3
Ford Credit (Compared with 2014):			
- Pre-Tax Profit (Bils.)	\$1.9	Equal To Or Higher	\$2.1
Total Company:			
- Pre-Tax Profit (Bils.) (b)(c)	\$7.3	\$10.0 - \$11.0	\$10.8

(a) China industry volume is based on estimated wholesales.

(b) Excludes special items; reconciliation to GAAP for full-year 2014 and 2015 provided in "Results of Operations" and "Liquidity and Capital Resources," above.

(c) The 2015 plan was updated on January 7, 2016 in connection with the change in accounting method for our defined benefit and OPEB plans.

PRODUCTION VOLUMES (a)

Our 2015 production volumes and first quarter 2016 projected production volumes are as follows (in thousands):

	2015 Actual		Full Year		2016 Forecast	
	Fourth Quarter	O/(U)	Units	O/(U)	First Quarter	O/(U)
	Units	2014	Units	2014	Units	2015
North America	800	102	3,130	161	840	117
South America	67	(38)	348	(51)	65	(37)
Europe	393	65	1,609	171	420	(16)
Middle East & Africa	17	(2)	83	7	20	(1)
Asia Pacific	428	52	1,504	65	435	62
Total	1,705	179	6,674	353	1,780	125

(a) Includes Ford brand and JMC brand vehicles produced by our unconsolidated affiliates.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

OUTLOOK

Total Company

Our 2016 outlook by segment is as follows:

	2015 Full Year Results	2016 Full Year Plan
Automotive (Mils.)		
North America	\$9,345	About Equal To 2015
- Operating Margin (Pct.)	10.2	% 9.5% or Higher
South America	\$(832) Greater Loss Than 2015
Europe	259	Higher Than 2015
Middle East & Africa	31	Equal To or Higher Than 2015
Asia Pacific	765	Higher Than 2015
Other Automotive	(796) Loss of About \$800 Million
Ford Credit (Mils.)	\$2,086	Equal To or Higher Than 2015

2016 Planning Assumptions and Key Metrics

Based on the current economic environment, our planning assumptions and key metrics for 2016 include the following:

	2015 Full Year Results	2016 Full Year Plan	GDP Growth Outlook
Planning Assumptions (Mils.)			
Industry Volume			
- U.S.	17.8	17.5 - 18.5	2.3 - 2.8 %
- Europe (a)	19.2	19.0 - 20.0	1.2 - 1.7 %
- Brazil	2.6	2.0 - 2.5	(2.0) - (3.0) %
- China (b)	23.5	23.5 - 25.5	6.5 - 7.0 %
Key Metrics			
Automotive:			
- Revenue (Bils.)	\$140.6	Equal To or Higher Than 2015	
- Operating Margin (Pct.)	6.8	% Equal To or Higher Than 2015	
- Operating-Related Cash Flow (Bils.) (c)	\$7.3	Strong, but Lower Than 2015	
Total Company Pre-Tax Profit (Bils.) (c)	\$10.8	Equal To or Higher Than 2015	
Operating Effective Tax Rate (Pct.) (d)	28.6	% Low 30s	
Operating EPS (c)	\$1.93	Equal To or Higher Than 2015	

(a) Europe industry reflects total Europe, including Turkey and Russia.

(b) Industry volume is based on estimated vehicle registrations.

(c)

Excludes special items; reconciliation to GAAP for full-year 2015 provided in “Results of Operations” and “Liquidity and Capital Resources” above.

(d) Excludes special items.

We expect continued benchmark profitability in North America in 2016 as we launch important high-volume products, such as Escape, Fusion, and Super Duty, and pursue emerging opportunities through Ford Smart Mobility. In South America, we expect losses to be higher in 2016 as industry volumes reduce further and regional currencies weaken. We expect Europe’s profit to grow in 2016 as we take further actions on costs to improve Europe’s breakeven volume, help offset increasing regulatory costs, and invest in profitable, growing product segments and mobility services. We expect Middle East & Africa to deliver results in 2016 that are equal to or higher than 2015 as we continue to implement the growth strategy we developed in 2015. We expect Asia Pacific’s profits to be higher in 2016 and we expect industry growth in China, partially as a result of the purchase tax reduction introduced in 2015. Ford Credit expects its pre-tax profit in 2016 to be equal to or higher than in 2015.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

We expect our operating effective tax rate to be in the low 30 percent range in 2016. In 2015, legislation was enacted in the fourth quarter that retroactively reinstated the U.S. research credit and other provisions of tax law that had expired. This late action contributed to our lower fourth quarter operating effective tax rate. The legislation made the research credit and certain other provisions permanent, which will eliminate the rate variability associated with such retroactive extensions of law.

In total, we expect 2016 to be another outstanding year.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Risk Factors

Statements included or incorporated by reference herein may constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements are based on expectations, forecasts, and assumptions by our management and involve a number of risks, uncertainties, and other factors that could cause actual results to differ materially from those stated, including, without limitation:

- Decline in industry sales volume, particularly in the United States, Europe, or China, due to financial crisis, recession, geopolitical events, or other factors;
- Decline in Ford's market share or failure to achieve growth;
- Lower-than-anticipated market acceptance of Ford's new or existing products or services;
- Market shift away from sales of larger, more profitable vehicles beyond Ford's current planning assumption, particularly in the United States;
- An increase in or continued volatility of fuel prices, or reduced availability of fuel;
- Continued or increased price competition resulting from industry excess capacity, currency fluctuations, or other factors;
- Fluctuations in foreign currency exchange rates, commodity prices, and interest rates;
 - Adverse effects resulting from economic, geopolitical, or other events;
- Economic distress of suppliers that may require Ford to provide substantial financial support or take other measures to ensure supplies of components or materials and could increase costs, affect liquidity, or cause production constraints or disruptions;
- Work stoppages at Ford or supplier facilities or other limitations on production (whether as a result of labor disputes, natural or man-made disasters, tight credit markets or other financial distress, production constraints or difficulties, or other factors);
- Single-source supply of components or materials;
- Labor or other constraints on Ford's ability to maintain competitive cost structure;
- Substantial pension and postretirement health care and life insurance liabilities impairing liquidity or financial condition;
- Worse-than-assumed economic and demographic experience for postretirement benefit plans (e.g., discount rates or investment returns);
- Restriction on use of tax attributes from tax law "ownership change;"
- The discovery of defects in vehicles resulting in delays in new model launches, recall campaigns, or increased warranty costs;
- Increased safety, emissions, fuel economy, or other regulations resulting in higher costs, cash expenditures, and/or sales restrictions;
- Unusual or significant litigation, governmental investigations, or adverse publicity arising out of alleged defects in products, perceived environmental impacts, or otherwise;
- A change in requirements under long-term supply arrangements committing Ford to purchase minimum or fixed quantities of certain parts, or to pay a minimum amount to the seller ("take-or-pay" contracts);
- Adverse effects on results from a decrease in or cessation or clawback of government incentives related to investments;
- Inherent limitations of internal controls impacting financial statements and safeguarding of assets;
- Cybersecurity risks to operational systems, security systems, or infrastructure owned by Ford, Ford Credit, or a third-party vendor or supplier;
- Failure of financial institutions to fulfill commitments under committed credit and liquidity facilities;
- Inability of Ford Credit to access debt, securitization, or derivative markets around the world at competitive rates or in sufficient amounts, due to credit rating downgrades, market volatility, market disruption, regulatory requirements, or other factors;

- Higher-than-expected credit losses, lower-than-anticipated residual values, or higher-than-expected return volumes for leased vehicles;
- Increased competition from banks, financial institutions, or other third parties seeking to increase their share of financing Ford vehicles; and
- New or increased credit regulations, consumer or data protection regulations, or other regulations resulting in higher costs and/or additional financing restrictions.

We cannot be certain that any expectation, forecast, or assumption made in preparing forward-looking statements will prove accurate, or that any projection will be realized. It is to be expected that there may be differences between projected and actual results. Our forward-looking statements speak only as of the date of their initial issuance, and we do not undertake any obligation to update or revise publicly any forward-looking statement, whether as a result of new information, future events, or otherwise. For additional discussion, see “Item 1A. Risk Factors” above.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

CRITICAL ACCOUNTING ESTIMATES

We consider an accounting estimate to be critical if: 1) the accounting estimate requires us to make assumptions about matters that were highly uncertain at the time the accounting estimate was made, and 2) changes in the estimate that are reasonably likely to occur from period to period, or use of different estimates that we reasonably could have used in the current period, would have a material impact on our financial condition or results of operations.

Management has discussed the development and selection of these critical accounting estimates with the Audit Committee of our Board of Directors. In addition, there are other items within our financial statements that require estimation, but are not deemed critical as defined above. Changes in estimates used in these and other items could have a material impact on our financial statements.

Warranty and Field Service Actions

Nature of Estimates Required. We provide warranties on the products we sell. Separately, we also periodically perform field service actions related to safety recalls, emission recalls, and other product campaigns. Pursuant to these warranties and field service actions, we will repair, replace or adjust all parts on a vehicle that are defective in factory-supplied materials or workmanship. We accrue the estimated cost of both basic warranty coverages and field service actions at the time of sale.

Assumptions and Approach Used. We establish estimates for warranty and field service action obligations using a patterned estimation model. We use historical information regarding the nature, frequency, and average cost of claims for each vehicle line by model year. We reevaluate our estimate of warranty and field service obligations on a regular basis. Experience has shown that initial data for any given model year may be volatile; therefore, our process relies on long-term historical averages until sufficient data are available. As actual experience becomes available, we use the data to modify the historical averages in order to ensure that the estimate is within the range of likely outcomes. We then compare the resulting accruals with present spending rates to ensure that the balances are adequate to meet expected future obligations. Based on these data, we revise our estimates as necessary. Warranty coverages vary; therefore, our warranty accruals vary depending upon the type of product and the geographic location of its sale for specific periods of time and/or mileage. Field service actions are distinguishable from warranties in that they may occur in periods beyond the basic warranty coverage period. Our best estimate of the obligation related to field service actions includes expected future payments related to vehicles produced in the most recent eight model years and announced field service actions for vehicles produced before this period.

Due to the uncertainty and potential volatility of these factors, changes in our assumptions could materially affect our financial condition and results of operations. See Note 27 of the Notes to the Financial Statements for information regarding warranty and product recall related costs.

Pensions and Other Postretirement Employee Benefits

Nature of Estimates Required. The estimation of our defined benefit pension and OPEB plan obligations and expenses requires that we make use of estimates of the present value of the projected future payments to all participants, taking into consideration the likelihood of potential future events such as demographic experience and health care cost increases. Plan obligations and expenses are based on existing retirement plan provisions. No assumption is made regarding any potential future changes to benefit provisions beyond those to which we are presently committed (e.g., in existing labor contracts).

Assumptions and Approach Used. The assumptions used in developing the required estimates include the following key factors:

- Discount rates. Our discount rate assumption is based primarily on the results of a cash flow matching analysis, which matches the future cash outflows for each major plan to a yield curve based on high-quality bonds specific to the country of the plan. Benefit payments are discounted at the rates on the curve to determine the year-end obligations.

Beginning in 2016, we changed the approach used to estimate the service and interest components of net periodic benefit cost for pension and OPEB for plans that utilize a yield curve approach. With this refinement, we will measure service and interest costs by applying the specific spot rates along that yield curve to the relevant projected cash flows for each component. We believe the new approach provides a more precise measurement of service and interest costs. This refinement has no effect on the measurement of our plan obligations or on full year pension and OPEB expense as lower service and interest costs recorded quarterly are offset in the fourth quarter remeasurement. We have accounted for this as a change in accounting estimate and accordingly, have accounted for it on a prospective basis.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Expected long-term rate of return on plan assets. Our expected long-term rate of return assumption reflects the historical returns and long-run inputs from a range of advisors for capital market returns, inflation, bond yields, and other variables, adjusted for specific aspects of our investment strategy such as asset mix. The assumption is based on consideration of all inputs, with a focus on long-term trends to avoid short-term market influences.

Salary growth. Our salary growth assumption reflects our actual experience, long-term outlook, and assumed inflation.

- Inflation. Our inflation assumption is based on an evaluation of external market indicators, including real gross domestic product growth and central bank inflation targets.

Expected contributions. Our expected amount and timing of contributions are based on an assessment of minimum requirements, cash availability, and other considerations (e.g., funded status, avoidance of regulatory premiums and levies, and tax efficiency).

Retirement rates. Retirement rates are developed to reflect actual and projected plan experience.

Mortality rates. Mortality rates are developed to reflect actual and projected plan experience.

Health care cost trends. Our health care cost trend assumptions are developed based on historical cost data, the near-term outlook, and an assessment of likely long-term trends.

Assumptions are set at each year end and are generally not changed during the year unless there is a major plan event such as a significant curtailment or settlement that would trigger a plan remeasurement.

On December 31, 2015, we adopted a change in accounting method for our defined benefit pension and OPEB plans retrospectively. See Note 1 of the Notes to the Financial Statements for additional information. With this change, the effects of actual results differing from our assumptions and the effects of changing assumptions (remeasurement gain/loss) are recognized within net periodic benefit costs in the period of remeasurement.

See Note 12 of the Notes to the Financial Statements for more information regarding pension and OPEB costs and assumptions.

Pension Plans

Effect of Actual Results. The year-end 2015 weighted average discount rate was 4.27% for U.S. plans and 3.20% for non-U.S. plans, reflecting increases of 33 and 14 basis points, respectively, compared with year-end 2014. In 2015, the U.S. actual return on assets was (1.8)%, which was lower than the expected long-term rate of return of 6.75%. Non-U.S. actual return on assets was 7.7%, which was higher than the expected long-term rate of return of 6.11%. Non-U.S. asset returns reflect the impact of a change in valuation technique for Ford-Werke pension plan assets (see Note 12 of the Notes to the Financial Statements for additional information). In total, these differences, in addition to demographic and other updates, resulted in a net loss of \$1 billion which has been recognized within net periodic benefit cost and reported as a special item within the Automotive sector.

For 2016, the expected long-term rate of return on assets is 6.75% for U.S. plans unchanged from 2015, and 5.56% for non-U.S. plans, down 55 basis points compared with a year ago, reflecting primarily a higher fixed income allocation.

Worldwide pension costs, excluding special items, was income of about \$300 million in 2015, about \$500 million better than 2014, driven primarily by lower interest costs and strong asset returns at year-end 2014. Based on year-end assumptions, we expect 2016 pension expense to be similar to 2015.

De-risking Strategy. In 2012, we adopted a broad global de-risking strategy which increases the matching characteristics of our assets relative to our obligation as funded status improves. Changes in interest rates (which directly influence changes in discount rates), in addition to other factors, have a significant impact on the value of our pension obligation and fixed income asset portfolio. As we de-risk our plans and increase the allocation to fixed income investments over time, we expect the funded status sensitivity to changes in interest rates will be significantly reduced. Changes in interest rates should result in offsetting effects in the value of our pension obligation and the value of the fixed income asset portfolio.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Sensitivity Analysis. The December 31, 2015 pension funded status and 2016 expense are affected by year-end 2015 assumptions. Sensitivities to these assumptions may be asymmetric and are specific to the time periods noted. The effects of changes in the factors which generally have the largest impact on year-end funded status and pension expense are discussed below.

Discount rates and interest rates have the largest impact on our net funded status. The table below estimates the impact as of December 31, 2015 on our funded status of an increase/decrease in discount rates and interest rates (in millions):

Factor	Basis Point Change	Increase/(Decrease) in December 31, 2015 Funded Status	
		U.S. Plans	Non-U.S. Plans
Discount rate - obligation	+/- 100 bps.	\$4,500/\$(5,500)	\$4,000/\$(5,100)
Interest rate - fixed income assets	+/- 100	(4,200)/5,200	(2,600)/3,200
Net impact on funded status		\$300/\$(300)	\$1,400/\$(1,900)

The fixed income asset sensitivity shown excludes other fixed income return components (e.g., bond coupon and active management excess returns), and growth asset returns. Other factors that impact net funded status (e.g., contributions) are not reflected.

Discount rates and the expected long-term rate of return on assets have the largest impact on pension expense. These assumptions are generally set at each year end for expense recorded throughout the following year. The table below estimates the impact on 2016 pension expense of a higher/lower assumption for these factors (in millions):

Factor	Basis Point Change	Increase/(Decrease) in 2016 Expense	
		U.S. Plans	Non-U.S. Plans
Discount rate - service cost and interest cost	+/- 25 bps.	\$30/\$(30)	\$5/\$(5)
Expected long-term rate of return on assets	+/- 25	(100)/100	(60)/60

The impact of changing multiple factors simultaneously cannot be calculated by combining the individual sensitivities. The sensitivity of pension expense to an increase in discount rates assumptions may not be linear.

Other Postretirement Employee Benefits

Effect of Actual Results. The weighted average discount rate used to determine the benefit obligation for U.S. OPEB plans at December 31, 2015 was 4.22%, compared with 3.86% at December 31, 2014, resulting in a worldwide gain of about \$300 million which has been recognized within net periodic benefit cost and reported as a special item within the Automotive sector.

Sensitivity Analysis. Discount rates have the largest impact on our OPEB obligation and expense. The table below estimates the impact on 2016 pension expense of higher/lower assumptions for these factors (in millions):

Factor	Basis Point Change	Worldwide OPEB (Increase)/Decrease	
		2015 YE Obligation	Increase/(Decrease) 2016 Expense
Discount rate - obligation	+/- 100 bps.	\$600/\$(700)	N/A

Discount rate - service cost and interest cost	+/- 25	N/A	\$5/\$(5)
--	--------	-----	-----------

Income Taxes

Nature of Estimates Required. We must make estimates and apply judgment in determining the provision for income taxes for financial reporting purposes. We make these estimates and judgments primarily in the following areas: (i) the calculation of tax credits, (ii) the calculation of differences in the timing of recognition of revenue and expense for tax and financial statement purposes that will ultimately be reported in tax returns, as well as (iii) the calculation of interest and penalties related to uncertain tax positions. Changes in these estimates and judgments may result in a material increase or decrease to our tax provision, which would be recorded in the period in which the change occurs.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Assumptions and Approach Used. We are subject to the income tax laws and regulations of the many jurisdictions in which we operate. These tax laws and regulations are complex and involve uncertainties in the application to our facts and circumstances that may be open to interpretation. We recognize benefits for these uncertain tax positions based upon a process that requires judgment regarding the technical application of the laws, regulations, and various related judicial opinions. If, in our judgment, it is more likely than not that the uncertain tax position will be settled favorably to us, we estimate an amount that ultimately will be realized. This process is inherently subjective, since it requires our assessment of the probability of future outcomes. We evaluate these uncertain tax positions on a quarterly basis, including consideration of changes in facts and circumstances, such as new regulations or recent judicial opinions, as well as the status of audit activities by taxing authorities. Changes to our estimate of the amount to be realized are recorded in our provision for income taxes during the period in which the change occurred.

We must also assess the likelihood that we will be able to recover our deferred tax assets against future sources of taxable income. GAAP requires a reduction of the carrying amount of deferred tax assets by recording a valuation allowance if, based on all available evidence, it is more likely than not (defined as a likelihood of more than 50%) that all or a portion of such assets will not be realized.

We presently believe that a valuation allowance of \$1.8 billion is required, primarily for deferred tax assets related to our South America operations. We believe that we ultimately will recover the remaining \$11 billion of deferred tax assets. We have assessed recoverability of these assets, and concluded that no valuation allowance is required.

For additional information regarding income taxes, see Note 21 of the Notes to the Financial Statements.

Allowance for Credit Losses

The allowance for credit losses represents Ford Credit's estimate of the probable credit loss inherent in finance receivables and operating leases as of the balance sheet date. The adequacy of Ford Credit's allowance for credit losses is assessed quarterly and the assumptions and models used in establishing the allowance are evaluated regularly. Because credit losses can vary substantially over time, estimating credit losses requires a number of assumptions about matters that are uncertain. See Note 7 of the Notes to the Financial Statements for more information regarding allowance for credit losses.

Nature of Estimates Required. Ford Credit estimates the probable credit losses inherent in finance receivables and operating leases based on several factors.

Consumer Portfolio. Ford Credit estimates the allowance for credit losses on consumer receivables and on operating leases using a combination of measurement models and management judgment. The models consider factors such as historical trends in credit losses and recoveries (including key metrics such as delinquencies, repossessions, and bankruptcies), the composition of Ford Credit's present portfolio (including vehicle brand, term, risk evaluation, and new/used vehicles), trends in historical used vehicle values, and economic conditions. Estimates from these models rely on historical information and may not fully reflect losses inherent in the present portfolio. Therefore, Ford Credit may adjust the estimate to reflect management judgment regarding observable changes in recent economic trends and conditions, portfolio composition, and other relevant factors.

Assumptions Used. Ford Credit's allowance for credit losses is based on assumptions regarding:

- **Frequency.** The number of finance receivables and operating lease contracts that are expected to default over the loss emergence period, measured as repossessions; and
- **Loss severity.** The expected difference between the amount a customer owes when the finance contract is charged off and the amount received, net of expenses, from selling the repossessed vehicle, including any recoveries from the

customer.

Collective Allowance for Credit Losses. The collective allowance is evaluated primarily using a collective loss-to-receivables (“LTR”) model that, based on historical experience, indicates credit losses have been incurred in the portfolio even though the particular accounts that are uncollectible cannot be specifically identified. The LTR model is based on the most recent years of history. Each LTR is calculated by dividing credit losses by average finance receivables or average operating leases, excluding unearned interest supplements and allowance for credit losses. An average LTR is calculated for each product and multiplied by the end-of-period balances for that given product.

82

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Ford Credit's largest markets also use a loss projection model to estimate losses inherent in the portfolio. The loss projection model applies recent monthly performance metrics, stratified by contract type (retail or lease), contract term (e.g., 60-month), and risk rating to Ford Credit's active portfolio to estimate the losses that have been incurred.

The loss emergence period ("LEP") is a key assumption within Ford Credit's models and represents the average amount of time between when a loss event first occurs to when it is charged off. This time period starts when the consumer begins to experience financial difficulty. It is evidenced, typically through delinquency, before eventually resulting in a charge-off. The LEP is a multiplier in the calculation of the collective consumer allowance for credit losses.

For accounts greater than 120 days past due, the uncollectible portion is charged off, such that the remaining recorded investment is equal to the estimated fair value of the collateral less costs to sell.

Specific Allowance for Impaired Receivables. Consumer receivables involved in Troubled Debt Restructurings are specifically assessed for impairment. A specific allowance is estimated based on the present value of the expected future cash flows of the receivable discounted at the contracts original effective interest rate or the fair value of any collateral adjusted for estimated costs to sell.

After establishing the collective and specific allowance for credit losses, if Ford Credit management believes the allowance does not reflect all losses inherent in the portfolio due to changes in recent economic trends and conditions, or other relevant factors, an adjustment is made based on management judgment.

Sensitivity Analysis. Changes in the assumptions used to derive frequency and severity would affect the allowance for credit losses. The effect of the indicated increase/decrease in the assumptions for Ford Credit's U.S. Ford and Lincoln brand retail financing and operating lease portfolio is as follows (in millions, except for percentages):

Assumption	Percentage Point Change	Increase/(Decrease) December 31,	
		2015 Allowance for Credit Losses	2016 Expense
Repossession ratios (a)	+/- 0.1 pt.	\$37/\$(37)	\$37/\$(37)
Loss severity	+/- 1.0	4/(4)	4/(4)

(a) Reflects the number of finance receivables and operating lease contracts that Ford Credit expects will default over a period of time relative to the average number of contracts outstanding.

Non-Consumer Portfolio. Ford Credit estimates the allowance for credit losses for non-consumer receivables based on historical LTR ratios, expected future cash flows, and the fair value of collateral.

Collective Allowance for Credit Losses. Ford Credit estimates an allowance for non-consumer receivables that are not specifically identified as impaired using a LTR model for each financing product based on historical experience. This LTR is an average of the most recent historical experience and is calculated consistent with the consumer receivables LTR approach. All accounts that are specifically identified as impaired are excluded from the calculation of the non-specific or collective allowance.

Specific Allowance for Impaired Receivables. Dealer financing is evaluated by segmenting individual loans by the risk characteristics of the loan (such as the amount of the loan, the nature of the collateral, and the financial status of the debtor). The loans are analyzed to determine whether individual loans are impaired, and a specific allowance is estimated based on the present value of the expected future cash flows of the receivable discounted at the loan's original effective interest rate or the fair value of the collateral adjusted for estimated costs to sell.

After establishing the collective and specific allowance for credit losses, if Ford Credit management believes the allowance does not reflect all losses inherent in the portfolio due to changes in recent economic trends and conditions, or other relevant factors, an adjustment is made based on management judgment.

Changes in Ford Credit's assumptions affect the Provision for credit losses and insurance losses on our income statement and the allowance for credit losses contained within Finance receivables, net and Net investment in operating leases on our balance sheet, in each case under the Financial Services sector.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

Accumulated Depreciation on Vehicles Subject to Operating Leases

Accumulated depreciation on vehicles subject to operating leases reduces the value of the leased vehicles in Ford Credit's operating lease portfolio from their original acquisition value to their expected residual value at the end of the lease term.

Ford Credit monitors residual values each month, and it reviews the adequacy of accumulated depreciation on a quarterly basis. If Ford Credit believes that the expected residual values for its vehicles have changed, it revises depreciation to ensure that net investment in operating leases (equal to the acquisition value of the vehicles less accumulated depreciation) will be adjusted to reflect Ford Credit's revised estimate of the expected residual value at the end of the lease term. Such adjustments to depreciation expense would result in a change in the depreciation rates of the vehicles subject to operating leases and are recorded prospectively on a straight-line basis.

Each lease customer has the option to buy the leased vehicle at the end of the lease or to return the vehicle to the dealer.

Nature of Estimates Required. Each operating lease in Ford Credit's portfolio represents a vehicle it owns that has been leased to a customer. At the time Ford Credit purchases a lease, it establishes an expected residual value for the vehicle. Ford Credit estimates the expected residual value by evaluating recent auction values, return volumes for its leased vehicles, industrywide used vehicle prices, marketing incentive plans, and vehicle quality data.

Assumptions Used. Ford Credit's accumulated depreciation on vehicles subject to operating leases is based on assumptions regarding:

- **Auction value.** Ford Credit's projection of the market value of the vehicles when sold at the end of the lease; and
- **Return volume.** Ford Credit's projection of the number of vehicles that will be returned at lease-end.

See Note 6 of the Notes to the Financial Statements for more information regarding accumulated depreciation on vehicles subject to operating leases.

Sensitivity Analysis. For returned vehicles, Ford Credit faces a risk that the amount it obtains from the vehicle sold at auction will be less than its estimate of the expected residual value for the vehicle. The effect of the indicated increase/decrease in the assumptions for Ford Credit's U.S. Ford and Lincoln brand operating lease portfolio is as follows (in millions, except for percentages):

Assumption	Percentage Change	Increase/(Decrease)	
		December 31, 2015	2016
		Accumulated Depreciation on Vehicles Subject to Operating Leases	Expense
Future auction values	+/- 1.0	\$(101)/\$101	\$(35)/\$35
Return volumes	+/- 1.0	13/(13)	6/(6)

The impact of the increased accumulated supplemental depreciation in 2015 would be charged to expense in the 2016 - 2019 periods. Adjustments to the amount of accumulated depreciation on operating leases would be reflected on our balance sheet as Net investment in operating leases and on the income statement in Depreciation on vehicles subject to operating leases, in each case under the Financial Services sector.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

ACCOUNTING STANDARDS ISSUED BUT NOT YET ADOPTED

The Financial Accounting Standards Board ("FASB") has issued the following standards, which are not expected to have a material impact (with the exception of standard 2014-09) to our financial statements or financial statement disclosures.

Standard	Effective Date (a)
2015-16 Business Combinations - Simplifying the Accounting for Measurement-Period Adjustments	January 1, 2016
2015-09 Insurance - Disclosures about Short-Duration Contracts	January 1, 2016
2015-05 Internal-Use Software - Customer's Accounting for Fees Paid in a Cloud Computing Arrangement	January 1, 2016
2015-02 Consolidation - Amendments to the Consolidation Analysis	January 1, 2016
2015-01 Extraordinary and Unusual Items - Simplifying Income Statement Presentation by Eliminating the Concept of Extraordinary Items	January 1, 2016
2014-16 Derivatives and Hedging - Determining Whether the Host Contract in a Hybrid Financial Instrument Issued in the Form of a Share Is More Akin to Debt or to Equity	January 1, 2016
2014-13 Consolidation - Measuring the Financial Assets and the Financial Liabilities of a Consolidated Collateralized Financing Entity	January 1, 2016
2014-12 Stock Compensation - Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period	January 1, 2016
2014-15 Going Concern - Disclosure of Uncertainties about an Entity's Ability to Continue as a Going Concern	December 31, 2016
2015-17 Income Taxes - Balance Sheet Classification of Deferred Taxes	January 1, 2017
2016-01 Financial Instruments - Recognition and Measurement of Financial Assets and Financial Liabilities	January 1, 2018
2014-09 Revenue - Revenue from Contracts with Customers	January 1, 2018 (b)

(a)Early adoption for each of the standards, except standard 2016-01, is permitted.

(b)For additional information see Note 3 of the Notes to the Financial Statements.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations (Continued)

AGGREGATE CONTRACTUAL OBLIGATIONS

We are party to many contractual obligations involving commitments to make payments to third parties. Most of these are debt obligations incurred by our Financial Services sector. Long-term debt may have fixed or variable interest rates. For long-term debt with variable-rate interest, we estimate the future interest payments based on projected market interest rates for various floating-rate benchmarks received from third parties. In addition, as part of our normal business practices, we enter into contracts with suppliers for purchases of certain raw materials, components, and services to facilitate adequate supply of these materials and services. These arrangements may contain fixed or minimum quantity purchase requirements. "Purchase obligations" are defined as off-balance sheet agreements to purchase goods or services that are enforceable and legally binding on the Company and that specify all significant terms.

The table below summarizes our contractual obligations as of December 31, 2015 (in millions):

	Payments Due by Period				Total
	2016	2017 - 2018	2019 - 2020	2021 and Thereafter	
Automotive Sector					
On-balance sheet					
Long-term debt (a)	\$944	\$2,210	\$1,659	\$7,556	\$12,369
Interest payments relating to long-term debt	629	1,067	910	6,702	9,308
Capital leases (b)	19	89	14	8	130
Pension funding (c)	475	—	—	—	475
Off-balance sheet					
Purchase obligations	1,656	1,527	654	613	4,450
Operating leases	267	367	174	73	881
Total Automotive sector	3,990	5,260	3,411	14,952	27,613
Financial Services Sector					
On-balance sheet					
Long-term debt (a)	29,096	45,538	20,423	12,622	107,679
Interest payments relating to long-term debt	2,416	3,200	1,773	1,247	8,636
Off-balance sheet					
Purchase obligations	17	35	1	—	53
Operating leases	8	9	4	7	28
Total Financial Services sector	31,537	48,782	22,201	13,876	116,396
Total Company	\$35,527	\$54,042	\$25,612	\$28,828	\$144,009

(a) Excludes unamortized debt discounts/premiums, debt issuance costs, and fair value adjustments.

(b) Includes interest payments of \$6 million.

(c) Amounts represent our estimate of contractually obligated deficit contributions to U.K. plans. See Note 12 for further information regarding our expected 2016 pension contributions and funded status.

The amount of unrecognized tax benefits for 2015 of \$1.6 billion (see Note 21 of the Notes to the Financial Statements for additional discussion) is excluded from the table above. Final settlement of a significant portion of these obligations will require bilateral tax agreements among us and various countries, the timing of which cannot reasonably be estimated.

For additional information regarding operating lease obligations, pension and OPEB obligations, and long-term debt, see Notes 6, 12, and 13, respectively, of the Notes to the Financial Statements.

86

ITEM 7A. Quantitative and Qualitative Disclosures About Market Risk

OVERVIEW

We are exposed to a variety of market and other risks, including the effects of changes in foreign currency exchange rates, commodity prices, and interest rates, as well as risks to availability of funding sources, hazard events, and specific asset risks.

These risks affect our Automotive and Financial Services sectors differently. We monitor and manage these exposures as an integral part of our overall risk management program, which includes regular reports to a central management committee, the Global Risk Management Committee (“GRMC”). The GRMC is chaired by our Chief Financial Officer, and its members include our Treasurer, our Corporate Controller, and other members of senior management.

Our Automotive and Financial Services sectors are exposed to liquidity risk, including the possibility of having to curtail business or being unable to meet financial obligations as they come due because funding sources may be reduced or become unavailable. Our plan is to maintain funding sources to ensure liquidity through a variety of economic or business cycles. As discussed in greater detail in Item 7, our funding sources include sales of receivables in securitizations and other structured financings, unsecured debt issuances, equity and equity-linked issuances, and bank borrowings.

We are exposed to a variety of insurable risks, such as loss or damage to property, liability claims, and employee injury. We protect against these risks through the purchase of commercial insurance that is designed to protect us above our self-insured retentions against events that could generate significant losses.

Direct responsibility for the execution of our market risk management strategies resides with our Treasurer’s Office and is governed by written policies and procedures. Separation of duties is maintained between the development and authorization of derivative trades, the transaction of derivatives, and the settlement of cash flows. Regular audits are conducted to ensure that appropriate controls are in place and that they remain effective. In addition, our market risk exposures and our use of derivatives to manage these exposures are approved by the GRMC, and reviewed by the Audit Committee of our Board of Directors.

In accordance with our corporate risk management policies, we use derivative instruments, when available, such as forward contracts, swaps and options that economically hedge certain exposures (foreign currency, commodity, and interest rates). We do not use derivative contracts for trading, market-making, or speculative purposes. In certain instances, we forgo hedge accounting, and in certain other instances, our derivatives do not qualify for hedge accounting. Either situation results in unrealized gains and losses that are recognized in income. For additional information on our derivatives, see Note 16 of the Notes to the Financial Statements.

The market and counterparty risks of our Automotive sector and Ford Credit are discussed and quantified below.

AUTOMOTIVE MARKET AND COUNTERPARTY RISK

Our Automotive sector frequently has expenditures and receipts denominated in foreign currencies, including the following: purchases and sales of finished vehicles and production parts, debt and other payables, subsidiary dividends, and investments in foreign operations. These expenditures and receipts create exposures to changes in exchange rates. We also are exposed to changes in prices of commodities used in our Automotive sector and changes in interest rates.

Foreign currency risk, commodity risk, and interest rate risk are measured and quantified using a model to evaluate the sensitivity of market value to instantaneous, parallel shifts in rates and/or prices.

Foreign Currency Risk. Foreign currency risk is the possibility that our financial results could be better or worse than planned because of changes in currency exchange rates. Accordingly, our normal practice is to use derivative instruments, when available, to hedge our economic exposure with respect to forecasted revenues and costs, assets, liabilities, and firm commitments denominated in foreign currencies. In our hedging actions, we use derivative instruments commonly used by corporations to reduce foreign exchange risk (e.g., forward contracts).

Item 7A. Quantitative and Qualitative Disclosures About Market Risk (Continued)

The net fair value of foreign exchange forward contracts (including adjustments for credit risk), as of December 31, 2015, was an asset of \$322 million compared with a liability of \$130 million as of December 31, 2014. The potential decrease in fair value from a 10% adverse change in the underlying exchange rates, in U.S. dollar terms, would have been \$2.2 billion at December 31, 2015, compared with \$2.1 billion at December 31, 2014. The sensitivity analysis presented is hypothetical and assumes foreign exchange rate changes are instantaneous and adverse across all currencies. In reality, foreign exchange rates move in different magnitudes and at different times, and any changes in fair value would generally be offset by changes in the underlying exposure. See Note 16 of the Notes to the Financial Statements for more information regarding our foreign currency exchange contracts.

Commodity Price Risk. Commodity price risk is the possibility that our financial results could be better or worse than planned because of changes in the prices of commodities used in the production of motor vehicles, such as base metals (e.g., steel, copper, and aluminum), precious metals (e.g., palladium), energy (e.g., natural gas and electricity), and plastics/resins (e.g., polypropylene). Accordingly, our normal practice is to use derivative instruments, when available, to hedge the price risk with respect to forecasted purchases of those commodities that we can economically hedge (primarily base metals and precious metals). In our hedging actions, we use derivative instruments commonly used by corporations to reduce commodity price risk (e.g., financially settled forward contracts).

The net fair value of commodity forward contracts (including adjustments for credit risk) as of December 31, 2015 was a liability of \$24 million compared with a liability of \$66 million as of December 31, 2014. The potential decrease in fair value from a 10% adverse change in the underlying commodity prices, in U.S. dollar terms, would be \$62 million at December 31, 2015, compared with \$63 million at December 31, 2014.

In addition, our purchasing organization (with guidance from the GRMC as appropriate) negotiates contracts to ensure continuous supply of raw materials. In some cases, these contracts stipulate minimum purchase amounts and specific prices, and, therefore, play a role in managing price risk.

Interest Rate Risk. Interest rate risk relates to the gain or loss we could incur in our Automotive investment portfolios due to a change in interest rates. Our interest rate sensitivity analysis on the investment portfolios includes cash and cash equivalents and net marketable securities. At December 31, 2015, we had \$23.6 billion in our Automotive investment portfolios, compared to \$21.7 billion at December 31, 2014. We invest the portfolios in securities of various types and maturities, the value of which are subject to fluctuations in interest rates. The portfolios are classified as trading portfolios and gains and losses (unrealized and realized) are reported in the income statement. The investment strategy is based on clearly defined risk and liquidity guidelines to maintain liquidity, minimize risk, and earn a reasonable return on the short-term investments. In investing our Automotive cash, safety of principal is the primary objective and risk-adjusted return is the secondary objective.

At any time, a rise in interest rates could have a material adverse impact on the fair value of our portfolios. Assuming a hypothetical increase in interest rates of one percentage point, the value of our portfolios would be reduced by about \$186 million as calculated as of December 31, 2015. This compares to \$148 million, as calculated as of December 31, 2014. While these are our best estimates of the impact of the specified interest rate scenario, actual results could differ from those projected. The sensitivity analysis presented assumes interest rate changes are instantaneous, parallel shifts in the yield curve. In reality, interest rate changes of this magnitude are rarely instantaneous or parallel.

Counterparty Risk. Counterparty risk relates to the loss we could incur if an obligor or counterparty defaulted on an investment or a derivative contract. We enter into master agreements with counterparties that allow netting of certain exposures in order to manage this risk. Exposures primarily relate to investments in fixed income instruments and derivative contracts used for managing interest rate, foreign currency exchange rate, and commodity price risk. We, together with Ford Credit, establish exposure limits for each counterparty to minimize risk and provide counterparty

diversification.

Our approach to managing counterparty risk is forward-looking and proactive, allowing us to take risk mitigation actions before risks become losses. Exposure limits are established based on our overall risk tolerance and estimated loss projections which are calculated from ratings-based historical default probabilities and market-based credit default swap (“CDS”) spreads. The exposure limits are lower for lower-rated counterparties, counterparties that have relatively higher CDS spreads, and for longer-dated exposures. Our exposures are monitored on a regular basis and included in periodic reports to our Treasurer.

Substantially all of our counterparty exposures are with counterparties that have an investment grade rating. Investment grade is our guideline for counterparty minimum long-term ratings.

88

Item 7A. Quantitative and Qualitative Disclosures About Market Risk (Continued)

FORD CREDIT MARKET RISK

Overview. Ford Credit is exposed to a variety of risks in the normal course of its business activities. In addition to counterparty risk discussed above, Ford Credit is subject to the following additional types of risks that it seeks to identify, assess, monitor, and manage, in accordance with defined policies and procedures:

• Market risk - the possibility that changes in interest and currency exchange rates will adversely affect cash flow and economic value;

• Credit risk - the possibility of loss from a customer's failure to make payments according to contract terms;

• Residual risk - the possibility that the actual proceeds received at lease termination will be lower than projections or return volumes will be higher than projections; and

• Liquidity risk - the possibility that Ford Credit may be unable to meet all of its current and future obligations in a timely manner.

Each form of risk is uniquely managed in the context of its contribution to Ford Credit's overall global risk. Business decisions are evaluated on a risk-adjusted basis and services are priced consistent with these risks. A discussion of Ford Credit's market risks (interest rate risk and foreign currency risk) is included below.

Interest Rate Risk. Generally, Ford Credit's assets and the related debt have different re-pricing periods, and consequently, respond differently to changes in interest rates.

Ford Credit's assets consist primarily of fixed-rate retail installment sale and operating lease contracts and floating-rate wholesale receivables. Fixed-rate retail installment sale and operating lease contracts generally require customers to make equal monthly payments over the life of the contract. Wholesale receivables are originated to finance new and used vehicles held in dealers' inventory and generally require dealers to pay a floating rate.

Debt consists primarily of short- and long-term unsecured debt and securitizations. In the case of unsecured term debt, and in an effort to have funds available throughout business cycles, Ford Credit may borrow at terms longer than the terms of its assets, in most instances with maturities up to ten years. These debt instruments are principally fixed-rate and require fixed and equal interest payments over the life of the instrument and a single principal payment at maturity.

Ford Credit's interest rate risk management objective is to reduce volatility in its cash flows and volatility in its economic value from changes in interest rates based on an established risk tolerance that may vary by market.

Ford Credit uses economic value sensitivity analysis and re-pricing gap analysis to evaluate potential long-term effects of changes in interest rates. It then enters into interest rate swaps to convert portions of its floating-rate debt to fixed or its fixed-rate debt to floating to ensure that Ford Credit's exposure falls within the established tolerances. Ford Credit also uses pre-tax cash flow sensitivity analysis to monitor the level of near-term cash flow exposure. The pre-tax cash flow sensitivity analysis measures the changes in expected cash flows associated with Ford Credit's interest-rate-sensitive assets, liabilities, and derivative financial instruments from hypothetical changes in interest rates over a twelve-month horizon. Ford Credit's Asset-Liability Committee reviews the re-pricing mismatch and exposure every month and approves interest rate swaps required to maintain exposure within approved thresholds prior to execution.

To provide a quantitative measure of the sensitivity of its pre-tax cash flow to changes in interest rates, Ford Credit uses interest rate scenarios that assume a hypothetical, instantaneous increase or decrease of one percentage point in all interest rates across all maturities (a "parallel shift"), as well as a base case that assumes that all interest rates remain constant at existing levels. In reality, interest rate changes are rarely instantaneous or parallel and rates could move

more or less than the one percentage point assumed in Ford Credit's analysis. As a result, the actual impact to pre-tax cash flow could be higher or lower than the results detailed in the table below. These interest rate scenarios are purely hypothetical and do not represent Ford Credit's view of future interest rate movements.

Under these interest rate scenarios, Ford Credit expects more assets than debt and liabilities to re-price in the next twelve months. Other things being equal, this means that during a period of rising interest rates, the interest earned on Ford Credit's assets will increase more than the interest paid on Ford Credit's debt, thereby initially increasing Ford Credit's pre-tax cash flow. During a period of falling interest rates, Ford Credit would expect its pre-tax cash flow to initially decrease. Ford Credit's pre-tax cash flow sensitivity to interest rate movement is highlighted in the table below.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk (Continued)

Pre-tax cash flow sensitivity as of year-end 2015 and 2014 was as follows (in millions):

	Pre-Tax Cash Flow Sensitivity (given a one percentage point instantaneous increase in interest rates)	Pre-Tax Cash Flow Sensitivity (given a one percentage point instantaneous decrease in interest rates) (a)
December 31, 2015	\$7	\$(7)
December 31, 2014	(46)	46

(a) Pre-tax cash flow sensitivity given a one percentage point decrease in interest rates requires an assumption of negative interest rates in markets where existing interest rates are below one percent.

While the sensitivity analysis presented is Ford Credit's best estimate of the impacts of the specified assumed interest rate scenarios, its actual results could differ from those projected. The model Ford Credit uses to conduct this analysis is heavily dependent on assumptions. Embedded in the model are assumptions regarding the reinvestment of maturing asset principal, refinancing of maturing debt, replacement of maturing derivatives, exercise of options embedded in debt and derivatives, and predicted repayment of retail installment sale and lease contracts ahead of contractual maturity. Ford Credit's repayment projections ahead of contractual maturity are based on historical experience. If interest rates or other factors change, Ford Credit's actual prepayment experience could be different than projected.

Foreign Currency Risk. Ford Credit's policy is to minimize exposure to changes in currency exchange rates. To meet funding objectives, Ford Credit borrows in a variety of currencies, principally U.S. dollars, Canadian dollars, Euros, Pound Sterling, and renminbi. Ford Credit faces exposure to currency exchange rates if a mismatch exists between the currency of receivables and the currency of the debt funding those receivables. When possible, receivables are funded with debt in the same currency, minimizing exposure to exchange rate movements. When a different currency is used, Ford Credit may use foreign currency swaps and foreign currency forwards to convert substantially all of its foreign currency debt obligations to the local country currency of the receivables. As a result of this policy, Ford Credit believes its market risk exposure, relating to changes in currency exchange rates at December 31, 2015, is insignificant.

Derivative Fair Values. The net fair value of Ford Credit's derivative financial instruments as of December 31, 2015 was an asset of \$681 million, compared to an asset of \$692 million as of December 31, 2014.

ITEM 8. Financial Statements and Supplementary Data.

The Report of Independent Registered Public Accounting Firm, our Financial Statements, the accompanying Notes to the Financial Statements, and the Financial Statement Schedule that are filed as part of this Report are listed under "Item 15. Exhibits and Financial Statement Schedules" and are set forth beginning on page FS-1 immediately following the signature pages of this Report.

Selected quarterly financial data for 2015 and 2014 are provided in Note 26 of the Notes to the Financial Statements.

ITEM 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.

None.

ITEM 9A. Controls and Procedures.

Evaluation of Disclosure Controls and Procedures. Mark Fields, our Chief Executive Officer (“CEO”), and Bob Shanks, our Chief Financial Officer (“CFO”), have performed an evaluation of the Company’s disclosure controls and procedures, as that term is defined in Rule 13a-15(e) of the Securities Exchange Act of 1934, as amended (“Exchange Act”), as of December 31, 2015, and each has concluded that such disclosure controls and procedures are effective to ensure that information required to be disclosed in our periodic reports filed under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified by SEC rules and forms, and that such information is accumulated and communicated to the CEO and CFO to allow timely decisions regarding required disclosures.

Management’s Report on Internal Control Over Financial Reporting. Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). The Company’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or because the degree of compliance with policies or procedures may deteriorate.

Under the supervision and with the participation of our management, including our CEO and CFO, we conducted an assessment of the effectiveness of our internal control over financial reporting as of December 31, 2015. The assessment was based on criteria established in the framework Internal Control - Integrated Framework (2013), issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this assessment, management concluded that our internal control over financial reporting was effective as of December 31, 2015.

The effectiveness of the Company’s internal control over financial reporting as of December 31, 2015 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in its report included herein.

Changes in Internal Control over Financial Reporting. On December 31, 2015, we adopted a method to recognize pension and OPEB remeasurement gains and losses in the year incurred rather than amortizing them over many years. In addition, fair value is used to calculate the expected return on plan assets. We previously used a market-related value of plan assets that recognized changes in fair value over time to calculate the expected return on plan assets.

ITEM 9B. Other Information.

None.

PART III.

ITEM 10. Directors, Executive Officers of Ford, and Corporate Governance.

The information required by Item 10 regarding our directors is incorporated by reference from the information under the captions “Election of Directors,” “Section 16(a) Beneficial Ownership Reporting Compliance,” and “Management Stock Ownership” in our Proxy Statement. The information required by Item 10 regarding our executive officers appears as Item 4A under Part I of this Report. The information required by Item 10 regarding an audit committee financial expert is incorporated by reference from the information under the caption “Corporate Governance – Audit Committee Financial Expert and Auditor Rotation” in our Proxy Statement. The information required by Item 10 regarding the members of our Audit Committee of the Board of Directors is incorporated by reference from the information under the captions “Proxy Summary,” “Corporate Governance – Board Committee Functions,” “Audit Committee Financial Expert and Auditor Rotation” and “Proposal 1 – Election of Directors” in our Proxy Statement. The information required by Item 10 regarding the Audit Committee’s review and discussion of the audited financial statements is incorporated by reference from information under the caption “Audit Committee Report” in our Proxy Statement. The information required by Item 10 regarding our codes of ethics is incorporated by reference from the information under the caption “Corporate Governance – Codes of Ethics” in our Proxy Statement. In addition, we have included in Item 1 instructions for how to access our codes of ethics on our website and our Internet address. Amendments to, and waivers granted under, our Code of Ethics for Senior Financial Personnel, if any, will be posted to our website as well.

ITEM 11. Executive Compensation.

The information required by Item 11 is incorporated by reference from the information under the following captions in our Proxy Statement: “Director Compensation in 2015,” “Compensation Discussion and Analysis,” “Compensation Committee Report,” “Compensation Committee Interlocks and Insider Participation,” “Compensation of Executive Officers,” “Summary Compensation Table,” “Grants of Plan-Based Awards in 2015,” “Outstanding Equity Awards at 2015 Fiscal Year-End,” “Option Exercises and Stock Vested in 2015,” “Pension Benefits in 2015,” “Nonqualified Deferred Compensation in 2015,” and “Potential Payments Upon Termination or Change in Control.”

ITEM 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.

The information required by Item 12 is incorporated by reference from the information under the captions “Equity Compensation Plan Information” and “Corporate Governance – Beneficial Stock Ownership” in our Proxy Statement.

ITEM 13. Certain Relationships and Related Transactions, and Director Independence.

The information required by Item 13 is incorporated by reference from the information under the captions “Certain Relationships and Related Transactions” and “Corporate Governance – Independence of Directors and Relevant Facts and Circumstances” in our Proxy Statement.

ITEM 14. Principal Accounting Fees and Services.

The information required by Item 14 is incorporated by reference from the information under the caption “Audit Committee Fees” in our Proxy Statement.

PART IV.

ITEM 15. Exhibits and Financial Statement Schedules.

(a) 1. Financial Statements – Ford Motor Company and Subsidiaries

The following are contained in this 2015 Form 10-K Report:

Report of Independent Registered Public Accounting Firm.

Consolidated Income Statement and Sector Income Statement for the years ended December 31, 2015, 2014, and 2013.

Consolidated Statement of Comprehensive Income for the years ended December 31, 2015, 2014, and 2013.

Consolidated Balance Sheet and Sector Balance Sheet at December 31, 2015 and 2014.

Consolidated Statement of Cash Flows and Sector Statement of Cash Flows for the years ended December 31, 2015, 2014, and 2013.

Consolidated Statement of Equity for the years ended December 31, 2015, 2014, and 2013.

Notes to the Financial Statements.

The Report of Independent Registered Public Accounting Firm, the Consolidated and Sector Financial Statements, and the Notes to the Financial Statements listed above are filed as part of this Report and are set forth beginning on page FS-1 immediately following the signature pages of this Report.

(a) 2. Financial Statement Schedules

Designation	Description
Schedule II	Valuation and Qualifying Accounts

Schedule II is filed as part of this Report and is set forth on page FSS-1 immediately following the Notes to the Financial Statements referred to above. The other schedules are omitted because they are not applicable, the information required to be contained in them is disclosed elsewhere on our Consolidated and Sector Financial Statements or the amounts involved are not sufficient to require submission.

(a) 3. Exhibits

Designation	Description	Method of Filing
Exhibit 3-A	Restated Certificate of Incorporation, dated August 2, 2000.	Filed as Exhibit 3-A to our Annual Report on Form 10-K for the year ended December 31, 2000.*
Exhibit 3-A-1	Certificate of Designation of Series A Junior Participating Preferred Stock filed on September 11, 2009.	Filed as Exhibit 3.1 to our Current Report on Form 8-K filed September 11, 2009.*
Exhibit 3-B	By-laws.	Filed as Exhibit 3.2 to our Form 8-A/A filed on September 11, 2015.*
Exhibit 4-A	Tax Benefit Preservation Plan (“TBPP”) dated September 11, 2009 between Ford Motor Company and Computershare Trust	Filed as Exhibit 4.1 to our Current Report on Form 8-K filed September 11, 2009.*

Edgar Filing: FORD MOTOR CO - Form 10-K

Exhibit 4-A-1	Company, N.A. Amendment No. 1 to TBPP dated September 11, 2012.	Filed as Exhibit 4 to our Current Report on Form 8-K filed September 12, 2012.*
Exhibit 4-A-2	Amendment No. 2 to TBPP dated September 9, 2015.	Filed as Exhibit 4.3 to our Current Report on Form 8-K filed September 11, 2015.*
Exhibit 10-A	Executive Separation Allowance Plan as amended and restated effective as of January 1, 2012.**	Filed as Exhibit 10-A to our Annual Report on Form 10-K for the year ended December 31, 2012.*
Exhibit 10-B	Deferred Compensation Plan for Non-Employee Directors, as amended and restated as of January 1, 2012.**	Filed as Exhibit 10-B to our Annual Report on Form 10-K for the year ended December 31, 2011.*
Exhibit 10-C	2014 Stock Plan for Non-Employee Directors**	Filed as Exhibit 10-C to our Annual Report on Form 10-K for the year ended December 31, 2013.*
Exhibit 10-D	Benefit Equalization Plan, as amended and restated as of January 1, 2012.**	Filed as Exhibit 10-C to our Annual Report on Form 10-K for the year ended December 31, 2012.*

Edgar Filing: FORD MOTOR CO - Form 10-K

Designation	Description	Method of Filing
Exhibit 10-E	Description of financial counseling services provided to certain executives.**	Filed as Exhibit 10-F to our Annual Report on Form 10-K for the year ended December 31, 2002.*
Exhibit 10-F	Supplemental Executive Retirement Plan, amended and restated effective as of January 1, 2013.**	Filed as Exhibit 10-E to our Annual Report on Form 10-K for the year ended December 31, 2012.*
Exhibit 10-F-1	Defined Contribution Supplemental Executive Retirement Plan, effective January 1, 2013.**	Filed as Exhibit 10-E-1 to our Annual Report on Form 10-K for the year ended December 31, 2012.*
Exhibit 10-G	Description of Director Compensation as of July 13, 2006.**	Filed as Exhibit 10-G-3 to our Quarterly Report on Form 10-Q for the quarter ended September 30, 2006.*
Exhibit 10-G-1	Amendment to Description of Director Compensation as of February 8, 2012.**	Filed as Exhibit 10-F-3 to our Annual Report on Form 10-K for the year ended December 31, 2011.*
Exhibit 10-G-2	Amendment to Description of Director Compensation as of July 1, 2013.**	Filed as Exhibit 10-G-2 to our Annual Report on Form 10-K for the year ended December 31, 2013.*
Exhibit 10-H	2008 Long-Term Incentive Plan.**	Filed as Exhibit 10.1 to our Quarterly Report on Form 10-Q for the quarter ended June 30, 2008.*

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Stockholders of
Ford Motor Company

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income, comprehensive income, equity and cash flows present fairly, in all material respects, the financial position of Ford Motor Company and its subsidiaries at December 31, 2015 and December 31, 2014, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2015 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing under Item 15(a)(2) presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2015, based on criteria established in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements and the financial statement schedule, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on these financial statements, on the financial statement schedule, and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As discussed in Note 1 to the consolidated financial statements, the Company changed the manner in which it accounts for defined benefit pension and other postretirement employee benefit plans in 2015.

The accompanying sector balance sheets and the related sector statements of income and of cash flows, included as supplemental information, have been subjected to audit procedures performed in conjunction with the audit of the Company's consolidated financial statements. The supplemental information is the responsibility of the Company's management. Our audit procedures included determining whether the supplemental information reconciles to the financial statements or the underlying accounting and other records, as applicable, and performing procedures to test the completeness and accuracy of the information presented in the supplemental information. In our opinion, the sector balance sheets and the related sector statements of income and of cash flows are fairly stated, in all material respects, in relation to the consolidated financial statements as a whole.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally

accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 1. PRESENTATION

For purposes of this report, “Ford,” the “Company,” “we,” “our,” “us”, or similar references mean Ford Motor Company, our consolidated subsidiaries, and our consolidated VIEs of which we are the primary beneficiary, unless the context requires otherwise.

We prepare our financial statements in accordance with generally accepted accounting principles in the United States (“GAAP”). We present the financial statements on both a consolidated basis and on a sector basis for our Automotive and Financial Services sectors. The additional information provided in the sector statements enables the reader to better understand the operating performance, financial position, cash flows, and liquidity of our two very different businesses. We eliminate all intercompany items in the consolidated and sector balance sheets. In certain circumstances, presentation of these intercompany eliminations or consolidated adjustments differ between the consolidated and sector financial statements. These line items are reconciled below under “Reconciliations between Consolidated and Sector Financial Statements” or in the related financial statements and footnotes.

We reclassified certain prior year amounts in our consolidated financial statements to conform to current year presentation.

Change in Accounting

Pension and Other Postretirement Employee Benefits (“OPEB”). On December 31, 2015, we adopted a change in accounting method for certain components of expense related to our defined benefit pension and OPEB plans. Under the new method, we recognize remeasurement gains and losses immediately in net income and use fair value to calculate the expected return on plan assets. Historically, we recognized remeasurement gains and losses as a component of Accumulated other comprehensive income/(loss) and amortized them as a component of net periodic benefit cost, subject to a corridor, over the remaining service period of our active employees. In addition, we previously used a market-related value of plan assets that recognized changes in fair value over time to calculate the expected return on plan assets.

We believe this change in accounting method is preferable as it better recognizes the current performance of our pension and OPEB plans in our net income in the year incurred. Additionally, our segment reporting shown in Note 24 now provides better transparency into the underlying operating results of Ford’s Automotive business units. We have retrospectively applied this change in accounting method to all prior periods. As of January 1, 2013, the cumulative effect of the change resulted in a decrease of \$18 billion in Retained earnings and an increase of \$18 billion in Accumulated other comprehensive income/(loss), both components of total equity in our consolidated and sector balance sheets.

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 1. PRESENTATION (Continued)

The effect of the change related to our defined benefit pension and OPEB plans on our consolidated financial statements at December 31 was as follows (in millions, except per share amounts):

	2015	2014		2013			
	Effect of Change Higher/(Lower)	As Revised	Previously Reported	Effect of Change Higher/(Lower)	As Revised	Previously Reported	Effect of Change Higher/(Lower)

FS-11

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 1. PRESENTATION (Continued)

In the first quarter of 2015, we recorded a \$782 million adjustment to correct for an understatement in the year-end 2014 valuation of our U.S. pension benefit obligation. The adjustment reduced Other assets by \$301 million and increased Other liabilities and deferred revenue by \$481 million. The resulting after-tax adjustment to Other comprehensive income was a loss of \$508 million. We originally determined this adjustment to be immaterial to our current or prior period financial statements. As a result of the change in accounting described above and the retrospective application to 2014, this after-tax loss is now reported in the revised 2014 Net income and also reflected in the related balance sheet amounts as of December 31, 2014.

Reconciliations between Consolidated and Sector Financial Statements

Sector to Consolidated Deferred Tax Assets and Liabilities. The difference between the total assets and total liabilities as presented on our sector balance sheet and consolidated balance sheet is the result of netting deferred income tax assets and liabilities. The reconciliation between the totals for the sector and consolidated balance sheets at December 31 was as follows (in millions):

	2015	2014
Sector balance sheet presentation of deferred income tax assets		
Automotive sector current deferred income tax assets	\$3,664	\$2,050
Automotive sector non-current deferred income tax assets	10,687	13,705
Financial Services sector deferred income tax assets (a)	135	185
Total	14,486	15,940
Reclassification for netting of deferred income taxes	(2,977)	(1,916)
Consolidated balance sheet presentation of deferred income tax assets	\$11,509	\$14,024
Sector balance sheet presentation of deferred income tax liabilities		
Automotive sector current deferred income tax liabilities	\$13	\$270
Automotive sector non-current deferred income tax liabilities	287	367
Financial Services sector deferred income tax liabilities	3,179	1,849
Total	3,479	2,486
Reclassification for netting of deferred income taxes	(2,977)	(1,916)
Consolidated balance sheet presentation of deferred income tax liabilities	\$502	\$570

(a) Included in Financial Services Other assets on our sector balance sheet.

Certain Transactions Between Automotive and Financial Services Sectors

Intersector transactions occur in the ordinary course of business. Additional detail regarding certain transactions and the effect on each sector's balance sheet at December 31 was as follows (in billions):

	2015		2014	
	Automotive	Financial Services	Automotive	Financial Services
Finance receivables, net (a)		\$5.4		\$5.0
Unearned interest supplements and residual support (b)		(4.5)		(3.9)
Wholesale/Other receivables (c)		0.8		0.8
Net investment in operating leases (d)		0.7		0.6
Intersector receivables/(payables) (e)	\$(1.1)	1.1	\$—	—

-
- Automotive sector receivables (generated primarily from vehicle and parts sales to third parties) sold to Ford Motor
- (a) Credit Company LLC (“Ford Credit”). These receivables are classified as Other receivables, net on our consolidated balance sheet and Finance receivables, net on our sector balance sheet.
 - (b) We pay amounts to Ford Credit at the point of retail financing or lease origination that represent interest supplements and residual support.
 - (c) Primarily wholesale receivables with entities that are consolidated subsidiaries of Ford.
 - (d) Sale-leaseback agreement between Automotive and Financial Services sectors relating to vehicles that we lease to our employees.
 - (e) Reflects amounts owed to the Financial Services sector by Automotive sector (these amounts include the balances related to the Wholesale/Other receivables described above).

FS-12

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

For each accounting topic that is addressed in its own footnote, the description of the accounting policy may be found in the related footnote. Other significant accounting policies are described below.

Use of Estimates

The preparation of financial statements requires us to make estimates and assumptions that affect our results. Estimates are used to account for certain items such as marketing accruals, warranty costs, employee benefit programs, etc. Estimates are based on assumptions that we believe are reasonable under the circumstances. Due to the inherent uncertainty involved with estimates, actual results may differ.

Foreign Currency

We remeasure monetary assets and liabilities denominated in a currency that is different from a reporting entity's functional currency from the transactional currency to the legal entity's functional currency. The effect of this remeasurement process, and the results of our foreign currency hedging activities are reported in Automotive cost of sales, Selling, administrative, and other expenses, and Automotive interest income and other income, net. The pre-tax losses for this activity were \$524 million, \$510 million, and \$349 million, for the years ended 2015, 2014, and 2013, respectively.

Generally, our foreign subsidiaries use the local currency as their functional currency. We translate the assets and liabilities of our foreign subsidiaries from their respective functional currencies to U.S. dollars using end-of-period exchange rates. Changes in the carrying value of these assets and liabilities attributable to fluctuations in exchange rates are recognized in Foreign currency translation, a component of Other comprehensive income/(loss). Upon sale or upon complete or substantially complete liquidation of an investment in a foreign subsidiary, the amount of accumulated foreign currency translation related to the entity is reclassified to income and recognized as part of the gain or loss on the investment.

Restricted Cash

Cash and cash equivalents that are restricted as to withdrawal or use under the terms of certain contractual agreements are recorded in Other assets on our balance sheet. Our Automotive sector restricted cash balances primarily include various escrow agreements related to legal, insurance, customs, and environmental matters. Our Financial Services sector restricted cash balances primarily include cash held to meet certain local governmental and regulatory reserve requirements and cash held under the terms of certain contractual agreements. Restricted cash does not include required minimum balances or cash securing debt issued through securitization transactions. The balance at December 31, 2015 was immaterial.

Trade Receivables

Trade receivables, recorded on our consolidated balance sheet in Other receivables, net, consist primarily of Automotive sector receivables for vehicles, parts, and accessories. Trade receivables initially are recorded at the transaction amount. We record an allowance for doubtful accounts representing our estimate of the probable losses. Each reporting period, we evaluate the collectability of the receivables. Additions to the allowance for doubtful accounts are made by recording charges to bad debt expense reported in Automotive cost of sales.

Net Intangible Assets

We capitalize and amortize our finite-lived intangible assets over their estimated useful lives. Indefinite-lived intangible assets are not amortized, but are tested for impairment annually or more frequently if events or circumstances indicate the assets may be impaired. Our intangible assets are comprised primarily of license and advertising agreements, land rights, patents, customer contracts, and technology. Our indefinite-lived intangibles were tested for impairment in 2015 and no impairment was required.

The net carrying amount of our intangible assets was \$124 million and \$133 million at December 31, 2015 and 2014, respectively, and are reported in Other assets on our balance sheet. Amortization was, and is expected to be, less than \$17 million a year through 2020.

FS-13

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Long-Lived Asset Impairment

We test long-lived asset groups for recoverability at the operating segment level when changes in circumstances indicate the carrying value may not be recoverable. Events that trigger a test for recoverability include material adverse changes in projected revenues and expenses, significant underperformance relative to historical and projected future operating results, significant negative industry or economic trends, and a significant adverse change in the manner in which an asset group is used or in its physical condition. When a triggering event occurs, a test for recoverability is performed, comparing projected undiscounted future cash flows to the carrying value of the asset group. If the test for recoverability identifies a possible impairment, the asset group's fair value is measured relying primarily on a discounted cash flow method. An impairment charge is recognized for the amount by which the carrying value of the asset group exceeds its estimated fair value. When an impairment loss is recognized for assets to be held and used, the adjusted carrying amount of those assets is depreciated over their remaining useful life. No impairment of long-lived assets was recorded in 2015.

Revenue Recognition — Automotive Sector

Automotive revenue is generated primarily by sales of vehicles, parts, and accessories. Revenue is recorded when all risks and rewards of ownership are transferred to our customers (generally dealers and distributors). For the majority of our sales, this occurs when products are shipped from our manufacturing facilities. When we give our dealers the right to return eligible parts for credit, we reduce the related revenue for expected returns.

We sell vehicles to fleet customers, primarily daily rental car companies, subject to guaranteed repurchase options. These vehicles are accounted for as operating leases. At the time of sale, the proceeds are recorded as deferred revenue in Other liabilities and deferred revenue. The difference between the proceeds and the guaranteed repurchase amount is recognized in Automotive revenues over the term of the lease using a straight line method. The cost of the vehicle is recorded in Net investment in operating leases and the difference between the cost of the vehicle and the estimated auction value is depreciated in Automotive cost of sales over the term of the lease. Proceeds from the sale of the vehicle at auction are recognized in Automotive revenues at the time of sale. On average, leases now remain outstanding for approximately one year; accordingly, we have reclassified Net investment in operating leases from current assets to non-current assets. We have reclassified our prior year sector statements to conform to current year presentation.

Revenue Recognition — Financial Services Sector

Financial Services revenue is generated primarily from interest on finance receivables (including direct financing leases). Interest is recognized using the interest method, and includes the amortization of certain direct origination costs. Revenue from payments received on operating leases is recognized on a straight-line basis over the term of the lease. Revenue from interest on finance receivables and operating leases is discontinued at the time a receivable or account is determined to be uncollectible.

Finance and Lease Incentives

We offer special financing and lease incentives to customers who choose to finance or lease Ford or Lincoln brand vehicles from Ford Credit. The estimated cost for these incentives is recorded as a reduction to Automotive revenues when the vehicle is sold to the dealer. Ford Credit records a reduction to the finance receivable or reduces the cost of

the vehicle operating lease when it records the underlying finance contract and we transfer to it the amount of the incentive on behalf of the dealer's customer. See Note 1 for additional information regarding transactions between Automotive and Financial Services sectors. The Financial Services sector recognized interest revenue of \$1.3 billion, \$1.4 billion, and \$1.5 billion in 2015, 2014, and 2013, respectively, and lower depreciation of \$1.5 billion, \$1.3 billion, and \$946 million in 2015, 2014 and 2013, respectively associated with these incentives.

FS-14

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Sales and Marketing Incentives

Sales and marketing incentives generally are recognized by the Automotive sector as revenue reductions in Automotive revenues. The incentives generally take the form of cash payments to dealers and dealers' customers. The reduction to revenue is accrued at the later of the date the related vehicle is sold or the date the incentive program is both approved and communicated. We generally estimate these accruals using incentive programs that are approved as of the balance sheet date and are expected to be effective at the beginning of the subsequent period.

Supplier Price Adjustments

We frequently negotiate price adjustments with our suppliers throughout a production cycle, even after receiving production material. These price adjustments relate to changes in design specifications or other commercial terms such as economics, productivity, and competitive pricing. We recognize price adjustments when we reach final agreement with our suppliers. In general, we avoid direct price changes in consideration of future business; however, when these occur, our policy is to defer the financial statement impact of any such price change given explicitly in consideration of future business where guaranteed volumes are specified.

Raw Material Arrangements

We may, at times, negotiate prices for and facilitate the purchase of raw materials on behalf of our suppliers. These raw material arrangements, which take place independently of any purchase orders issued to our suppliers, are negotiated at arms' length and do not involve volume guarantees. When we pass the risks and rewards of ownership to our suppliers, including inventory risk, market price risk, and credit risk for the raw material, we record both the cost of the raw material and the income from the subsequent sale to the supplier in Automotive cost of sales.

Government Incentives

We receive incentives from U.S. and non-U.S. governmental entities in the form of tax rebates or credits, grants, and loans. Government incentives are recorded in the financial statements in accordance with their purpose, either as a reduction of expense, a reduction of the cost of the capital investment, or other income. The benefit is recorded when all conditions attached to the incentive have been met and there is reasonable assurance of receipt.

Employee Bonus and Lump-sum Payments

Performance-based and inflation-protection employee bonuses are accrued throughout the period in which services are provided and the bonus is earned. Lump-sum cash bonuses paid in connection with signing a union contract are recognized entirely in the period that the contract negotiations are finalized and ratified.

Effective November 23, 2015, we signed a new agreement with the International Union, United Automobile, Aerospace, and Agricultural Implement Workers of America ("UAW") covering approximately 53,000 employees in the United States. The agreement established wages, benefits, and a variety of bonus payments for covered employees over a four-year period. The agreement also provided for a lump-sum ratification bonus of \$8,500 per employee which we have reported in Automotive cost of sales.

Selected Other Costs

Engineering, research, and development expenses, primarily salaries, materials, and associated costs, are reported in Automotive cost of sales; advertising costs are reported in Selling, administrative, and other expenses. Engineering, research, and development costs are expensed as incurred when performed internally or when performed by a supplier if we guarantee reimbursement. Advertising costs are expensed as incurred. Engineering, research, development, and advertising expenses for the years ended December 31 were as follows (in billions):

	2015	2014	2013
Engineering, research, and development	\$6.7	\$6.7	\$6.2
Advertising	4.3	4.3	4.4

NOTES TO THE FINANCIAL STATEMENTS

NOTE 2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Presentation of Sales and Sales-Related Taxes

We collect and remit taxes assessed by different governmental authorities that are both imposed on and concurrent with a revenue-producing transaction between us and our customers. These taxes may include, but are not limited to, sales, use, value-added, and some excise taxes. We report the collection of these taxes on a net basis (excluded from revenues).

NOTE 3. NEW ACCOUNTING STANDARDS

Adoption of New Accounting Standards

We adopted the following standards during 2015, none of which have a material impact to our financial statements or financial statement disclosures:

Standard	Effective Date
2015-11 Inventory - Simplifying the Measurement of Inventory - see Note 8	December 31, 2015
2015-07 Fair Value Measurement - Disclosures for Investments in Certain Entities that Calculate Net Asset Value per Share (or Its Equivalent) - see Note 12	December 31, 2015
2015-03 Imputation of Interest - Simplifying the Presentation of Debt Issuance Costs - see Note 13	December 31, 2015

Accounting Standards Issued But Not Yet Adopted

Accounting Standard Update (“ASU”) 2014-09, Revenue - Revenue from Contracts with Customers. In May 2014, the Financial Accounting Standards Board (“FASB”) issued a new accounting standard that requires recognition of revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which we expect to be entitled in exchange for those goods or services. The new standard supersedes U.S. GAAP guidance on revenue recognition and requires the use of more estimates and judgments than the present standards, as well as additional disclosures. The FASB issued ASU 2015-14 to defer the original effective date from January 1, 2017 to January 1, 2018, while allowing for early adoption as of January 1, 2017. The new accounting standard is expected to have an impact to our income statement, balance sheet, and financial statement disclosures and we are reviewing our arrangements to evaluate the impact and method of adoption.

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 4. FAIR VALUE MEASUREMENTS

Cash equivalents, marketable securities, and derivative financial instruments are remeasured and presented on our financial statements on a recurring basis at fair value, while other assets and liabilities are measured at fair value on a nonrecurring basis.

Fair Value Measurements

In measuring fair value, we use various valuation methods and prioritize the use of observable inputs. The use of observable and unobservable inputs and their significance in measuring fair value are reflected in our fair value hierarchy.

Level 1 - inputs include quoted prices for identical instruments and are the most observable

Level 2 - inputs include quoted prices for similar instruments and observable inputs such as interest rates, currency exchange rates, and yield curves

Level 3 - inputs include data not observable in the market and reflect management judgment about the assumptions market participants would use in pricing the instruments

Transfers into and transfers out of the hierarchy levels are recognized as if they had taken place at the end of the reporting period.

Valuation Methods

Cash and Cash Equivalents. Included in Cash and cash equivalents are highly liquid investments that are readily convertible to known amounts of cash and are subject to an insignificant risk of change in value due to interest rate, quoted price, or penalty on withdrawal. A debt security is classified as a cash equivalent if it meets these criteria and if it has a remaining time to maturity of three months or less from the date of acquisition. Amounts on deposit and available upon demand, or negotiated to provide for daily liquidity without penalty, are classified as Cash and cash equivalents. Time deposits, certificates of deposit, and money market accounts that meet the above criteria are reported at par value on our balance sheet and are excluded from the tables below.

Marketable Securities. Investments in securities with a maturity date greater than three months at the date of purchase and other securities for which there is more than an insignificant risk of change in value due to interest rate, quoted price, or penalty on withdrawal are classified as Marketable securities. We generally measure fair value using prices obtained from pricing services. Pricing methods and inputs to valuation models used by the pricing services depend on the security type (i.e., asset class). Where possible, fair values are generated using market inputs including quoted prices (the closing price in an exchange market), bid prices (the price at which a buyer stands ready to purchase), and other market information. For fixed income securities that are not actively traded, the pricing services use alternative methods to determine fair value for the securities, including quotes for similar fixed-income securities, matrix pricing, discounted cash flow using benchmark curves, or other factors. In certain cases, when market data are not available, we may use broker quotes to determine fair value.

An annual review is performed on the security prices received from our pricing services, which includes discussion and analysis of the inputs used by the pricing services to value our securities. We also compare the price of certain securities sold close to the quarter end to the price of the same security at the balance sheet date to ensure the reported fair value is reasonable.

Realized gains and losses and interest income on all of our marketable securities, and unrealized gains and losses on securities not classified as available for sale (“AFS”), are recorded in Automotive interest income and other income/(expense), net and Financial Services other income/(loss), net. Unrealized gains and losses on AFS securities are recognized in Unrealized gains and losses on securities, a component of Other comprehensive income/(loss). Realized gains and losses and reclassifications of accumulated other comprehensive income into net income are measured using the specific identification method.

FS-17

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 4. FAIR VALUE MEASUREMENTS (Continued)

Included in non-U.S. government and agencies marketable securities at December 31, 2015 are AFS securities with an aggregate fair value of \$70 million, an amortized cost basis of \$82 million, and unrealized losses of \$12 million. All of these securities have a maturity date between one and five years as of the balance sheet date. During 2015, proceeds and realized gains/(losses) from the sale of AFS securities were \$1 million and \$0, respectively. We regularly evaluate whether unrealized losses on AFS securities are temporary in nature. If losses are determined to be other than temporary and we do not expect to recover the carrying amount of the security, we reclassify unrecognized losses into income. We have determined that none of our AFS securities are impaired at December 31, 2015. We did not have any AFS securities at December 31, 2014.

Derivative Financial Instruments. Our derivatives are over-the-counter customized derivative transactions and are not exchange traded. We estimate the fair value of these instruments using industry-standard valuation models such as a discounted cash flow. These models project future cash flows and discount the future amounts to a present value using market-based expectations for interest rates, foreign exchange rates, commodity prices, and the contractual terms of the derivative instruments. The discount rate used is the relevant interbank deposit rate (e.g., LIBOR) plus an adjustment for non-performance risk. The adjustment reflects the full credit default swap (“CDS”) spread applied to a net exposure, by counterparty, considering the master netting agreements and any posted collateral. We use our counterparty’s CDS spread when we are in a net asset position and our own CDS spread when we are in a net liability position. In certain cases, market data is not available and we use broker quotes and models (e.g., Black-Scholes) to determine fair value. This includes situations where there is lack of liquidity for a particular currency or commodity, or when the instrument is longer dated.

Finance Receivables. We measure finance receivables at fair value for purposes of disclosure (see Note 5) using internal valuation models. These models project future cash flows of financing contracts based on scheduled contract payments (including principal and interest). The projected cash flows are discounted to present value based on assumptions regarding credit losses, pre-payment speed, and applicable spreads to approximate current rates. Our assumptions regarding pre-payment speed and credit losses are based on historical performance. The fair value of finance receivables is categorized within Level 3 of the hierarchy.

On a nonrecurring basis, we also measure at fair value retail contracts greater than 120 days past due or deemed to be uncollectible, and individual dealer loans probable of foreclosure. We use the fair value of collateral, adjusted for estimated costs to sell, to determine the fair value of our receivables. The collateral for a retail receivable is the vehicle financed, and for dealer loans is real estate or other property.

The fair value of collateral for retail receivables is calculated by multiplying the outstanding receivable balances by the average recovery value percentage. The fair value of collateral for dealer loans is determined by reviewing various appraisals, which include total adjusted appraised value of land and improvements, alternate use appraised value, broker’s opinion of value, and purchase offers.

Debt. We measure debt at fair value for purposes of disclosure (see Note 13) using quoted prices for our own debt with approximately the same remaining maturities. Where quoted prices are not available, we estimate fair value using discounted cash flows and market-based expectations for interest rates, credit risk, and the contractual terms of the debt instruments. For certain short-term debt with an original maturity date of one year or less, we assume that book value is a reasonable approximation of the debt’s fair value. The fair value of debt is categorized within Level 2 of the hierarchy.

Excludes time deposits, certificates of deposit, money market accounts, and other cash equivalents reported at par value on our balance sheet totaling \$3.8 billion and \$3.3 billion for Automotive sector and \$6.3 billion and (a) \$3.8 billion for Financial Services sector at December 31, 2015 and 2014, respectively. In addition to these cash equivalents, we also had cash on hand totaling \$1.3 billion and \$1.1 billion for Automotive sector and \$2.3 billion and \$2 billion for Financial Services sector at December 31, 2015 and 2014, respectively.
(b) See Note 16 for additional information regarding derivative financial instruments.

FS-19

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 5. FINANCIAL SERVICES SECTOR FINANCE RECEIVABLES

Our Financial Services sector, primarily Ford Credit, manages finance receivables as “consumer” and “non-consumer” portfolios. The receivables are generally secured by the vehicles, inventory, or other property being financed.

Finance receivables are recorded at time of origination or purchase at fair value and are subsequently reported at amortized cost, net of any allowance for credit losses.

Consumer Portfolio. Receivables in this portfolio include products offered to individuals and businesses that finance the acquisition of Ford and Lincoln vehicles from dealers for personal or commercial use. Retail financing includes retail installment contracts for new and used vehicles and direct financing leases with retail customers, government entities, daily rental companies, and fleet customers.

Non-Consumer Portfolio. Receivables in this portfolio include products offered to automotive dealers. The products include:

Dealer financing – includes wholesale loans to dealers to finance the purchase of vehicle inventory, also known as floorplan financing, as well as loans to dealers to finance working capital and improvements to dealership facilities, finance the purchase of dealership real estate, and finance other dealer programs. Wholesale financing is approximately 95% of our dealer financing

Other financing – primarily related to the sale of parts and accessories to dealers

Finance receivables, net at December 31 were as follows (in millions):

	2015	2014
Consumer		
Retail financing, gross	\$62,068	\$55,856
Unearned interest supplements	(2,119)	(1,760)
Consumer finance receivables	59,949	54,096
Non-Consumer		
Dealer financing	35,529	31,340
Other financing	958	1,026
Non-Consumer finance receivables	36,487	32,366
Total recorded investment	\$96,436	\$86,462
Recorded investment in finance receivables	\$96,436	\$86,462
Allowance for credit losses	(373)	(321)
Finance receivables, net (a) (b)	\$96,063	\$86,141
Net finance receivables subject to fair value (c)	\$94,248	\$84,468
Fair value	95,420	85,941

On the consolidated balance sheet at December 31, 2015 and 2014, \$5.4 billion and \$5 billion, respectively, are (a) reclassified to Other receivables, net, resulting in Finance receivables, net of \$90.7 billion and \$81.1 billion, respectively.

(b) At December 31, 2015 and 2014, Finance receivables, net includes \$1.8 billion and \$1.7 billion, respectively, of net investment in direct financing leases.

(c) At December 31, 2015 and 2014, excludes \$1.8 billion and \$1.7 billion, respectively, of certain receivables (primarily direct financing leases) that are not subject to fair value disclosure requirements.

Excluded from finance receivables at December 31, 2015 and 2014, was \$209 million and \$191 million, respectively, of accrued uncollected interest, which we report in Other assets on the balance sheet.

FS-20

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 5. FINANCIAL SERVICES SECTOR FINANCE RECEIVABLES (Continued)

Included in the recorded investment in finance receivables at December 31, 2015 and 2014 were consumer receivables of \$27.6 billion and \$24.4 billion, respectively, and non-consumer receivables of \$26.1 billion and \$21.8 billion, respectively, that have been sold for legal purposes in securitization transactions but continue to be reported in our consolidated financial statements. The receivables are available only for payment of the debt issued by, and other obligations of, the securitization entities that are parties to those securitization transactions; they are not available to pay the other obligations or the claims of Ford Credit's other creditors. Ford Credit holds the right to receive the excess cash flows not needed to pay the debt issued by, and other obligations of, the securitization entities that are parties to those securitization transactions (see Note 15).

Contractual maturities of total finance receivables outstanding at December 31, 2015 reflect contractual repayments due from customers or borrowers as follows (in millions):

	Due in Year Ending December 31,			Thereafter	Total
	2016	2017	2018		
Consumer					
Retail financing, gross (a)	\$17,627	\$15,811	\$12,847	\$15,783	\$62,068
Non-Consumer					
Dealer financing	32,461	1,768	261	1,039	35,529
Other financing	958	—	—	—	958
Total finance receivables	\$51,046	\$17,579	\$13,108	\$16,822	\$98,555

(a) Contractual maturities of retail financing, gross include \$162 million of estimated unguaranteed residual values related to direct finance leases.

Our finance receivables are generally pre-payable without penalty, so prepayments may cause actual maturities to differ from contractual maturities. The above table, therefore, is not to be regarded as a forecast of future cash collections. For wholesale receivables, which are included in dealer financing, maturities stated above are estimated based on historical trends, as maturities on outstanding amounts are scheduled upon the sale of the underlying vehicle by the dealer.

Aging

For all finance receivables, we define "past due" as any payment, including principal and interest, that is at least 31 days past the contractual due date. The recorded investment of consumer receivables greater than 90 days past due and still accruing interest was \$16 million and \$17 million at December 31, 2015 and 2014, respectively. The recorded investment of non-consumer receivables greater than 90 days past due and still accruing interest was \$1 million and \$3 million at December 31, 2015 and 2014, respectively.

The aging analysis of our finance receivables balances at December 31 was as follows (in millions):

	2015	2014
Consumer		
31-60 days past due	\$708	\$718
61-90 days past due	108	97
91-120 days past due	27	29
Greater than 120 days past due	38	52

Edgar Filing: FORD MOTOR CO - Form 10-K

Total past due	881	896
Current	59,068	53,200
Consumer finance receivables	59,949	54,096
Non-Consumer		
Total past due	117	117
Current	36,370	32,249
Non-Consumer finance receivables	36,487	32,366
Total recorded investment	\$96,436	\$86,462

FS-21

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 5. FINANCIAL SERVICES SECTOR FINANCE RECEIVABLES (Continued)

Credit Quality

Consumer Portfolio. When originating all classes of consumer receivables, we use a proprietary scoring system that measures the credit quality of the receivables using several factors, such as credit bureau information, consumer credit risk scores (e.g., FICO score), and contract characteristics. In addition to our proprietary scoring system, we consider other individual consumer factors, such as employment history, financial stability, and capacity to pay.

Subsequent to origination, we review the credit quality of retail financing based on customer payment activity. As each customer develops a payment history, we use an internally-developed behavioral scoring model to assist in determining the best collection strategies which allows us to focus collection activity on higher-risk accounts. These models are used to refine our risk-based staffing model to ensure collection resources are aligned with portfolio risk. Based on data from this scoring model, contracts are categorized by collection risk. Our collection models evaluate several factors, including origination characteristics, updated credit bureau data, and payment patterns.

Credit quality ratings for consumer receivables are based on aging. Refer to the aging table above.

Consumer receivables credit quality ratings are as follows:

Pass – current to 60 days past due

- Special Mention – 61 to 120 days past due and in intensified collection status

Substandard – greater than 120 days past due and for which the uncollectible portion of the receivables has already been charged off, as measured using the fair value of collateral less costs to sell

Non-Consumer Portfolio. We extend credit to dealers primarily in the form of lines of credit to purchase new Ford and Lincoln vehicles as well as used vehicles. Payment is required when the dealer has sold the vehicle. Each non-consumer lending request is evaluated by taking into consideration the borrower's financial condition and the underlying collateral securing the loan. We use a proprietary model to assign each dealer a risk rating. This model uses historical dealer performance data to identify key factors about a dealer that we consider most significant in predicting a dealer's ability to meet its financial obligations. We also consider numerous other financial and qualitative factors of the dealer's operations including capitalization and leverage, liquidity and cash flow, profitability, and credit history with ourselves and other creditors.

Dealers are assigned to one of four groups according to risk ratings as follows:

Group I – strong to superior financial metrics

Group II – fair to favorable financial metrics

Group III – marginal to weak financial metrics

Group IV – poor financial metrics, including dealers classified as uncollectible

We generally suspend credit lines and extend no further funding to dealers classified in Group IV.

We regularly review our model to confirm the continued business significance and statistical predictability of the factors and update the model to incorporate new factors or other information that improves its statistical predictability. In addition, we regularly audit dealer inventory and dealer sales records to verify that the dealer is in possession of the

financed vehicles and is promptly paying each receivable following the sale of the financed vehicle. The frequency of on-site vehicle inventory audits depends on factors such as the dealer's risk rating and our security position. Under our policies, on-site vehicle inventory audits of low-risk dealers are conducted only as circumstances warrant. Audits of higher-risk dealers are conducted with increased frequency based on risk ratings and our security position. We perform a credit review of each dealer at least annually and adjust the dealer's risk rating, if necessary.

The credit quality of dealer financing receivables is evaluated based on our internal dealer risk rating analysis. A dealer has the same risk rating for its entire dealer financing regardless of the type of financing.

FS-22

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 5. FINANCIAL SERVICES SECTOR FINANCE RECEIVABLES (Continued)

The credit quality analysis of our dealer financing receivables at December 31 was as follows (in millions):

	2015	2014
Dealer Financing		
Group I	\$26,560	\$23,125
Group II	7,175	6,350
Group III	1,683	1,783
Group IV	111	82
Total recorded investment	\$35,529	\$31,340

Impaired Receivables. Impaired consumer receivables include accounts that have been rewritten or modified in reorganization proceedings pursuant to the U.S. Bankruptcy Code that are considered to be troubled debt restructurings (“TDRs”), as well as all accounts greater than 120 days past due. Impaired non-consumer receivables represent accounts with dealers that have weak or poor financial metrics or dealer financing that has been modified in TDRs. The recorded investment of consumer receivables that were impaired at December 31, 2015 and 2014 was \$375 million, or 0.6% of consumer receivables, and \$415 million, or 0.8% of consumer receivables, respectively. The recorded investment of non-consumer receivables that were impaired at December 31, 2015 and 2014 was \$134 million, or 0.4% of non-consumer receivables, and \$105 million, or 0.3% of the non-consumer receivables, respectively. Impaired finance receivables are evaluated both collectively and specifically.

The accrual of revenue is discontinued at the time a receivable is determined to be uncollectible. Accounts may be restored to accrual status only when a customer settles all past-due deficiency balances and future payments are reasonably assured. For receivables in non-accrual status, subsequent financing revenue is recognized only to the extent a payment is received. Payments are generally applied first to outstanding interest and then to the unpaid principal balance.

A restructuring of debt constitutes a TDR if we grant a concession to a debtor for economic or legal reasons related to the debtor’s financial difficulties that we otherwise would not consider. Consumer and non-consumer receivables that have a modified interest rate below market rate or that were modified in reorganization proceedings pursuant to the U.S. Bankruptcy Code, except non-consumer receivables that are current with minimal risk of loss, are considered to be TDRs. We do not grant concessions on the principal balance of our receivables. If a receivable is modified in a reorganization proceeding, all payment requirements of the reorganization plan need to be met before remaining balances are forgiven. Finance receivables involved in TDRs are specifically assessed for impairment.

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 6. NET INVESTMENT IN OPERATING LEASES

Net investment in operating leases on our balance sheet consists primarily of lease contracts for vehicles with retail customers, daily rental companies, government entities, and fleet customers. Assets subject to operating leases are depreciated using the straight-line method over the term of the lease to reduce the asset to its estimated residual value. Estimated residual values are based on assumptions for used vehicle prices at lease termination and the number of vehicles that are expected to be returned.

The net investment in operating leases at December 31 was as follows (in millions):

	2015	2014
Automotive Sector		
Vehicles, net of depreciation	\$2,014	\$1,699
Financial Services Sector		
Vehicles and other equipment, at cost (a)	29,673	24,952
Accumulated depreciation	(4,545)	(3,396)
Allowance for credit losses	(49)	(38)
Total Financial Services sector	25,079	21,518
Total Company	\$27,093	\$23,217

Includes Ford Credit's operating lease assets of \$13.3 billion and \$9.6 billion at December 31, 2015 and 2014, respectively, for which the related cash flows have been used to secure certain lease securitization (a) transactions. Cash flows associated with the net investment in operating leases are available only for payment of the debt or other obligations issued or arising in the securitization transactions; they are not available to pay other obligations or the claims of other creditors.

Financial Services Sector

Included in Financial Services revenues are rents on operating leases. The amounts contractually due for minimum rentals on operating leases at December 31, 2015 were as follows (in millions):

	2016	2017	2018	2019	Thereafter	Total
Minimum rentals on operating leases	\$4,021	\$2,504	\$919	\$59	\$3	\$7,506

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 7. FINANCIAL SERVICES SECTOR ALLOWANCE FOR CREDIT LOSSES

The allowance for credit losses represents our estimate of the probable credit loss inherent in finance receivables as of the balance sheet date. The adequacy of the allowance for credit losses is assessed quarterly and the assumptions and models used in establishing the allowance are evaluated regularly. Because credit losses may vary substantially over time, estimating credit losses requires a number of assumptions about matters that are uncertain. The majority of credit losses are attributable to Ford Credit's consumer receivables portfolio.

Additions to the allowance for credit losses are made by recording charges to Provision for credit and insurance losses on the sector income statement. The uncollectible portion of finance receivables are charged to the allowance for credit losses at the earlier of when an account is deemed to be uncollectible or when an account is 120 days delinquent, taking into consideration the financial condition of the customer, borrower, or lessee, the value of the collateral, recourse to guarantors, and other factors.

In the event we repossess the collateral, the receivable is charged off and we record the collateral at its estimated fair value less costs to sell and report it in Other assets on the balance sheet. Charge-offs on finance receivables include uncollected amounts related to principal, interest, late fees, and other allowable charges. Recoveries on finance receivables previously charged off as uncollectible, are credited to the allowance for credit losses.

Consumer

We estimate the allowance for credit losses on our consumer receivables using a combination of measurement models and management judgment. The models consider factors such as historical trends in credit losses and recoveries (including key metrics such as delinquencies, repossessions, and bankruptcies), the composition of the present portfolio (including vehicle brand, term, risk evaluation, and new/used vehicles), trends in historical used vehicle values, and economic conditions. Estimates from these models rely on historical information and may not fully reflect losses inherent in the present portfolio. Therefore, we may adjust the estimate to reflect management judgment regarding observable changes in recent economic trends and conditions, portfolio composition, and other relevant factors.

We make projections of two key assumptions to assist in estimating the consumer allowance for credit losses:

- Frequency - number of finance receivables contracts that are expected to default over the loss emergence period, measured as repossessions
- Loss severity - expected difference between the amount a customer owes when the finance contract is charged off and the amount received, net of expenses from selling the repossessed vehicle, including any recoveries from the customer

Collective Allowance for Credit Losses. The collective allowance is evaluated primarily using a collective loss to receivables ("LTR") model that, based on historical experience, indicates credit losses have been incurred in the portfolio even though the particular accounts that are uncollectible cannot be specifically identified. The LTR model is based on the most recent years of history. Each LTR is calculated by dividing credit losses by average finance receivables excluding unearned interest supplements and allowance for credit losses. An average LTR is calculated for each product and multiplied by the end-of-period balances for that given product.

FORD MOTOR COMPANY AND SUBSIDIARIES
NOTES TO THE FINANCIAL STATEMENTS

NOTE 7. FINANCIAL SERVICES SECTOR ALLOWANCE FOR CREDIT LOSSES (Continued)

Our largest markets also use a loss projection model to estimate losses inherent in the portfolio. The loss projection model applies recent monthly performance metrics, stratified by contract type (retail or lease), contract term (e.g., 60 month), and risk rating to our active portfolio to estimate the losses that have been incurred.

The loss emergence period (“LEP”) is a key assumption within our models and represents the average amount of time between when a loss event first occurs and when it is charged off. This time period starts when the consumer begins to experience financial difficulty. It is evidenced, typically through delinquency, before eventually resulting in a charge-off. The LEP is a multiplier in the calculation of the collective consumer allowance for credit losses.

For accounts greater than 120 days past due, the uncollectible portion is charged off such that the remaining recorded investment is equal to the estimated fair value of the collateral less costs to sell.

Specific Allowance for Impaired Receivables. Consumer receivables involved in TDRs are specifically assessed for impairment. A specific allowance is estimated based on the present value of the expected future cash flows of the receivable discounted at the contract’s original effective interest rate or the fair value of any collateral adjusted for estimated costs to sell.

After establishing the collective and specific allowance for credit losses, if management believes the allowance does not reflect all losses inherent in the portfolio due to changes in recent economic trends and conditions, or other relevant factors, an adjustment is made based on management judgment.

Non-Consumer

We estimate the allowance for credit losses for non-consumer receivables based on historical LTR ratios, expected future cash flows, and the fair value of collateral.

Collective Allowance for Credit Losses. We estimate an allowance for non-consumer receivables that are not specifically identified as impaired using a LTR model for each financing product based on historical experience. This LTR is an average of the most recent historical experience and is calculated consistent with the consumer receivables LTR approach. All accounts that are specifically identified as impaired are excluded from the calculation of the non-specific or collective allowance.

Specific Allowance for Impaired Receivables. Dealer financing is evaluated by segmenting individual loans by the risk characteristics of the loan (such as the amount of the loan, the nature of the collateral, and the financial status of the debtor). The loans are analyzed to determine whether individual loans are impaired, and a specific allowance is estimated based on the present value of the expected future cash flows of the receivable discounted at the loan’s original effective interest rate or the fair value of the collateral adjusted for estimated costs to sell.

After establishing the collective and the specific allowance for credit losses, if management believes the allowance does not reflect all losses inherent in the portfolio due to changes in recent economic trends and conditions, or other relevant factors, an adjustment is made based on management judgment.

NOTE 7. FINANCIAL SERVICES SECTOR ALLOWANCE FOR CREDIT LOSSES (Continued)

An analysis of the allowance for credit losses related to finance receivables for the years ended December 31 were as follows (in millions):

	2015			
	Consumer	Non-Consumer	Total	
Allowance for credit losses				
Beginning balance	\$ 305	\$ 16	\$ 321	
Charge-offs	(333) (3) (336)
Recoveries	120	6	126	
Provision for credit losses	276	(2) 274	
Other (a)	(11) (1) (12)
Ending balance (b)	\$ 357	\$ 16	\$ 373	
Analysis of ending balance of allowance for credit losses				
Collective impairment allowance	\$ 338	\$ 12	\$ 350	
Specific impairment allowance	19	4	23	
Ending balance (b)	357	16	373	
Analysis of ending balance of finance receivables				
Collectively evaluated for impairment	59,574	36,353	95,927	
Specifically evaluated for impairment	375	134	509	
Recorded investment	59,949	36,487	96,436	
Ending balance, net of allowance for credit losses	\$ 59,592	\$ 36,471	\$ 96,063	

(a) Primarily represents amounts related to translation adjustments.

(b) Total allowance, including reserves for operating leases, was \$422 million.

	2014			
	Consumer	Non-Consumer	Total	
Allowance for credit losses				
Beginning balance	\$ 327	\$ 30	\$ 357	
Charge-offs	(294) (6) (300)
Recoveries	131	9	140	
Provision for credit losses	150	(17) 133	
Other (a)	(9) —	(9)
Ending balance (b)	\$ 305	\$ 16	\$ 321

NOTE 8. INVENTORIES

All inventories are stated at the lower of cost and net realizable value. Cost for a substantial portion of U.S. inventories is determined on a last-in, first-out (“LIFO”) basis. LIFO was used for 27% and 28% of total inventories at December 31, 2015 and 2014, respectively. Cost of other inventories is determined by costing methods that approximate a first-in, first-out (“FIFO”) basis.

Inventories at December 31 were as follows (in millions):

	2015	2014
Raw materials, work-in-process, and supplies	\$4,005	\$3,859
Finished products	5,254	5,026
Total inventories under FIFO	9,259	8,885
LIFO adjustment	(940)	(1,015)
Total inventories	\$8,319	\$7,870

NOTE 9. EQUITY IN NET ASSETS OF AFFILIATED COMPANIES

We use the equity method of accounting for our investments in entities over which we do not have control, but over whose operating and financial policies we are able to exercise significant influence.

Our ownership percentages and carrying value of our equity method investments at December 31 were as follows (in millions, except percentages):

	Ownership Percentage	Investment Balance	
		2015	2014
Automotive Sector	2015	2015	2014
Changan Ford Automobile Corporation, Limited	50.0	% \$1,307	\$1,301
Jiangling Motors Corporation, Limited	32.0	636	604
AutoAlliance (Thailand) Co., Ltd.	50.0	429	428

NOTE 9. EQUITY IN NET ASSETS OF AFFILIATED COMPANIES (Continued)

We received \$1.5 billion, \$1.5 billion, and \$529 million of dividends from these affiliated companies for the years ended December 31, 2015, 2014, and 2013, respectively.

A summary of the total financial results, as reported by our equity method investees, in the aggregate at December 31 was as follows (in millions):

Summarized Balance Sheet	2015	2014	
Current assets	\$10,400	\$11,012	
Non-current assets	9,687	13,749	
Total assets	\$20,087	\$24,761	
Current liabilities	\$10,863	\$11,943	
Non-current liabilities	2,608	4,597	
Total liabilities	\$13,471	\$16,540	
Equity attributable to noncontrolling interests	\$8	\$8	

Summarized Income Statement	For the years ended December 31,		
	2015	2014	2013
Total revenue	\$35,623	\$40,658	\$38,736
Income before income taxes	4,525	3,985	2,815
Net income	3,894	3,510	2,587

In the ordinary course of business we buy/sell various products and services including vehicles, parts, and components to/from our equity method investees. In addition, we receive royalty income.

Transactions with equity method investees reported on our consolidated income statement and balance sheet at December 31 were as follows (in millions):

Income Statement	For the years ended December 31,		
	2015	2014	2013
Sales	\$4,426	\$5,208	\$6,421
Purchases	7,780	9,430	10,536
Royalty income	610	500	526
Balance Sheet	2015		2014
Receivables	\$870		\$1,056
Payables	671		712

NOTE 10. NET PROPERTY AND LEASE COMMITMENTS

Net Property

Net property is reported at cost, net of accumulated depreciation and impairments. We capitalize new assets when we expect to use the asset for more than one year. Routine maintenance and repair costs are expensed when incurred.

Property and equipment are depreciated primarily using the straight-line method over the estimated useful life of the asset. Useful lives range from 3 years to 36 years. The estimated useful lives generally are 14.5 years for machinery and equipment, 8 years for software, 30 years for land improvements, and 36 years for buildings. Tooling generally is amortized over the expected life of a product program using a straight-line method.

Net property at December 31 was as follows (in millions):

	2015	2014
Automotive Sector		
Land	\$344	\$351
Buildings and land improvements	9,942	10,601
Machinery, equipment, and other	33,164	33,381
Software	2,241	2,122
Construction in progress	1,750	1,719
Total land, plant and equipment, and other	47,441	48,174
Accumulated depreciation	(27,466)	(29,134)
